| TABLE OF AUTHORITIES .....                                                                                        | iv |
| STATEMENT IN SUPPORT OF ORAL ARGUMENT.....                                                                        | 1  |
| STATEMENT OF JURISDICTION.....                                                                                    | 2  |
| STATEMENT OF ISSUES.....                                                                                          | 3  |
| INTRODUCTION .....                                                                                                | 5  |
| STATEMENT OF THE CASE .....                                                                                       | 8  |
| I.    Facts.....                                                                                                  | 8  |
| A.    The displacement of women and girls in sports .....                                                         | 8  |
| B.    President Biden and the Department redefine<br>Title IX.....                                                | 10 |
| C.    A.F. is a female athlete whose rights have been<br>harmed by the Title IX Mandate.....                      | 11 |
| D.    ACSI's member schools cherish and protect the<br>rights of their female athlete students. ....              | 13 |
| II.    Proceedings.....                                                                                           | 14 |
| III.   Standard of review .....                                                                                   | 15 |
| SUMMARY OF THE ARGUMENT .....                                                                                     | 17 |
| ARGUMENT.....                                                                                                     | 19 |
| I.    The States have standing to sue. ....                                                                       | 19 |
| A.    Regulated entities can challenge agency<br>requirements. ....                                               | 19 |
| B.    Title IX does not preclude review under the APA.....                                                        | 23 |
| 1.    Appealing a complaint is no adequate remedy<br>to violations of rulemaking standards under<br>the APA. .... | 23 |

|      |                                                                                                                              |    |
|------|------------------------------------------------------------------------------------------------------------------------------|----|
| 2.   | The right to appeal an adverse complaint finding does not negate judicial review of rulemaking. ....                         | 25 |
| II.  | The Title IX mandate violates the APA’s notice and comment requirements. ....                                                | 27 |
| III. | The mandate exceeds the Department’s statutory authority. ....                                                               | 29 |
| A.   | Title IX prohibits sex discrimination, it does not mandate sex blindness. ....                                               | 29 |
| 1.   | Title IX prohibits treating one sex worse than the other sex. ....                                                           | 30 |
| 2.   | Not all sex <i>distinctions</i> are “discrimination.” ....                                                                   | 31 |
| 3.   | Title IX sometimes requires sex distinctions to fulfill its mandate. ....                                                    | 34 |
| B.   | Because Title IX allows sex distinctions, it only deals with biological sex, not sexual orientation or gender identity. .... | 37 |
| 1.   | Title IX’s original, ordinary meaning is about biological sex. ....                                                          | 37 |
| 2.   | Title IX’s structure points to biological sex. ....                                                                          | 38 |
| 3.   | Title IX’s purpose is to promote equality based on biological sex. ....                                                      | 41 |
| 4.   | <i>Bostock</i> is inapposite. ....                                                                                           | 43 |
| 5.   | The mandate violates the major questions doctrine. ....                                                                      | 46 |
| IV.  | The mandate is arbitrary and capricious. ....                                                                                | 49 |
| A.   | The mandate relies on an erroneous view of <i>Bostock</i> . ....                                                             | 49 |
| B.   | The mandate failed to consider reliance interests and alternatives. ....                                                     | 51 |

|                                                           |    |
|-----------------------------------------------------------|----|
| CONCLUSION AND REQUESTED RELIEF.....                      | 53 |
| CERTIFICATE OF COMPLIANCE .....                           | 54 |
| CERTIFICATE OF SERVICE.....                               | 55 |
| DESIGNATION OF RELEVANT DISTRICT COURT<br>DOCUMENTS ..... | 56 |

## STATEMENT IN SUPPORT OF ORAL ARGUMENT

Intervenors-Appellees Association of Christian Schools

International (ACSI) and A.F. respectfully request oral argument.<sup>1</sup>

Defendants have issued a nationwide mandate that would radically undermine fairness for women and girls across the educational spectrum, including for A.F. and the female athletes at ACSI's schools.

This case presents important questions, including: (1) whether states regulated by a federal agency may challenge a mandate overriding their laws; (2) whether the agency can issue that mandate without giving the public notice and an opportunity to comment; (3) whether the mandate exceeds the agency's authority under Title IX and the major questions doctrine; and (4) whether the mandate is arbitrary and capricious for failure to consider important aspects of the problem. The Eleventh Circuit recently interpreted Title IX to allow separation of facilities and sports based on biological sex. *Adams v. Sch. Bd. of St. Johns Cnty.*, --- F.4th ---, 2022 WL 18003879, at \*18 (11th Cir. Dec. 30, 2022) (en banc); *see also B.P.J. v. W. Va. State Bd. of Educ.*, --- F. Supp. 3d ---, 2023 WL 111875, at \*9 (S.D. W. Va. Jan. 5, 2023) ("Title IX's endorsement of sex separation in sports refers to biological sex.").

Because the case raises numerous important questions of significant nuance, oral argument will assist the Court.

---

<sup>1</sup> Intervenors-Appellees' motion only sought to appear for ACSI and A.F.; as minors, A.S. and C.F. have experienced changed circumstances.

## STATEMENT OF JURISDICTION

Plaintiffs’ complaint raises federal questions under the Administrative Procedure Act, the Declaratory Judgment Act, 28 U.S.C. § 1361, and the U.S. Constitution. Compl. (“Compl.”) ¶¶ 24–28, 136, 144, 151, 154, 178, 182, 186, R.1, PageID# 6 –7, 25–28, 30–32. The Intervenor-Appellees’ verified complaint raises similar claims. Intervenor’s Compl. ¶¶ 5–11, R.104, PageID# 2430–31. The district court exercised original jurisdiction because the case involves questions of federal law. *See, e.g.*, Mem. Op. & Order (“Op.”), R.86, PageID# 1954; *cf.* 28 U.S.C. § 1331 (federal question jurisdiction).

Appellate jurisdiction exists under 28 U.S.C. § 1291. On July 15, 2022, the District Court granted in part and denied in part Plaintiffs-Appellees’ motion for preliminary injunction. Op., R.86, PageID# 1987. The United States filed a timely notice of appeal on September 13, 2022. Notice of Appeal, R.100, PageID# 2407. This Court has jurisdiction over the interlocutory appeal under 28 U.S.C. § 1292(a)(1).

## STATEMENT OF ISSUES

A.F. is a female athlete in Arkansas who has dedicated her athletic efforts to excellence in team sports. Like millions of other girls, she deserves the opportunity to compete on a safe and fair playing field against other female athletes. And private schools around the country, like those that belong to ACSI, seek to give their female student athletes a fair chance to compete—and to win.

But the federal government issued a binding Title IX mandate that would have erased women's sports and eliminated the opportunities for women that Congress enacted Title IX to protect. The District Court correctly granted the Plaintiff States' motion for preliminary injunction against that mandate, and it later properly granted intervention status to A.F. and ASCI seeking the same relief against the Department of Education.<sup>2</sup>

Intervenors-Appellees raise several issues in this appeal:

1. Whether the States had standing to challenge a mandate that binds them as regulated educational entities under Title IX.
2. Whether the Title IX mandate violated the Administrative Procedure Act (APA) by failing to use the notice-and-comment process.
3. Whether the Title IX mandate exceeds the agency's statutory authority and violates the major questions doctrine because it radically reverses women's opportunity as protected by the statute.

---

<sup>2</sup> Intervenors did not bring claims against the EEOC and its mandate.

4. Whether the Title IX mandate is arbitrary and capricious for failing to consider reliance interests and alternatives, and for depending on an interpretation of *Bostock v. Clayton County*, 140 S. Ct. 1731 (2020), that the Supreme Court expressly disavowed.

## INTRODUCTION

The Biden administration’s Title IX mandate is part of a government-wide effort to reformulate civil-rights laws to promote a radically different agenda—one without statutory authority or public participation. On his first day in office, President Biden released an Executive Order stating that laws that prohibit sex discrimination, including Title IX, now prohibit discrimination based on sexual orientation and gender identity. Exec. Order No. 13,988, 86 Fed. Reg. 7023 (Jan. 20, 2021). Multiple agencies obeyed this directive with announcements that all regulated entities must comply and officials must fully enforce these mandates.<sup>3</sup> These agencies explicitly claimed these mandates were required by the Supreme Court’s decision in *Bostock*, despite the Supreme Court, and this Court, explicitly disavowing its application beyond hiring and firing in Title VII.<sup>4</sup>

---

<sup>3</sup> See, e.g., U.S. Dep’t of Hous. & Urban Dev., Implementation of Executive Order 13988 on the Enforcement of the Fair Housing Act (Feb. 11, 2021), <https://perma.cc/2R4P-UHNZ>; Notification of Interpretation and Enforcement of Section 1557 of the Affordable Care Act and Title IX of the Educ. Amendments of 1972, 86 Fed. Reg. 27,984 (May 25, 2021) (codified at 45 C.F.R. pts. 86, 92); Enforcement of Title IX of the Education Amendments of 1972 With Respect to Discrimination Based on Sexual Orientation and Gender Identity in Light of *Bostock v. Clayton County*, 86 Fed. Reg. 32,637 (June 22, 2021) (“Interpretation”), R.1-2, PageID# 41–45; U.S. Dep’t of Educ., Off. for Civ. Rts., Letter to Educators on Title IX’s 49th Anniversary, and accompanying Fact Sheet (June 23, 2021) (“Fact Sheet”), R.1-4, PageID# 69–74.

<sup>4</sup> 140 S. Ct. at 1753; *Pelcha v. MW Bancorp, Inc.*, 988 F.3d 318, 324 (6th Cir. 2021) (“the rule in *Bostock* extends no further than Title VII”).

The “Interpretation” and “Fact Sheet” here (the “Title IX mandate”) from the Department of Education (Department) are part of this government-wide push. The mandate instructs all entities subject to Title IX to comply—including the Plaintiff States and their educational institutions, such as Intervenors—and threatens them with enforcement. It is therefore both binding and final agency action subject to review under the APA. It is also a legislative or substantive review subject to the APA’s notice-and-comment requirement—a process the Department eschewed. The practical effect of this unlawful agency action is extraordinary: it immediately renders illegal all school policies that assign membership to men’s and women’s athletic teams based on biological sex. The result is that males identifying as female can compete against female athletes, the exact opposite of what Title IX was enacted to accomplish.

For these reasons the District Court correctly enjoined the mandate. Agencies have only the authority given to them by Congress; they cannot impose mandates of “vast economic and political significance” that lack clear statutory authority. *West Virginia v. EPA*, 142 S. Ct. 2587, 2605 (2022) (quoting *Util. Air Regul. Grp. v. EPA*, 573 U.S. 302, 324 (2014)). And they cannot enact binding rules even within their authority if they do not provide notice and an opportunity to comment. 5 U.S.C. § 553. The District Court’s opinion is supported by recent decisions of the Eleventh Circuit, sitting en banc, and a District Court

in West Virginia, both of which take the opposite view of Title IX than do Defendants-Appellants. *Adams*, 2022 WL 18003879; *B.P.J.*, 2023 WL 111875. (The Administration filed a brief on the opposite side in *BPJ*, highlighting the conflict between the Administration’s position and these court rulings.)

The States had standing to sue. The States are directly regulated by the Department’s mandate, since they and their educational institutions receive funds subjecting them to Title IX. “[T]here can be ‘little question’” that regulated entities can challenge agency actions that apply to them. *West Virginia*, 142 S. Ct. at 2606 (quoting *Lujan v. Defs. of Wildlife*, 504 U.S. 555, 561–562 (1992)). The mandate also overrides their state laws that reinforce Title IX to protect women’s opportunity in education and athletics. Intervenor A.F. in Arkansas, and the female athletes at ACSI’s schools in the Plaintiff States, are protected by those laws, so the injunction likewise prevents their injury.

The mandate was issued in violation of the notice and comment requirements of the APA, and alternative bases also exist to affirm the injunction. For example, the Title IX mandate exceeds the agency’s statutory authority because, far from authorizing the mandate, Title IX prohibits it by allowing sports and facilities to be separated by sex as defined by biology. As the Eleventh Circuit held en banc, the “plain and ordinary meaning of ‘sex’ in 1972” in Title IX does not mean “gender identity” or “transgender status.” *Adams*, 2022 WL 18003879, at \*18.

Finally, the Title IX mandate is arbitrary and capricious under the APA. The Administration explicitly and erroneously relied on the view that *Bostock* means Title IX prohibits discrimination based on gender identity. 86 Fed. Reg. at 32,638–39. And the Department failed to consider women’s reliance interests on the opportunity afforded to them under Title IX, or any alternative approaches. For all these reasons, this Court should affirm the District Court’s ruling.

## STATEMENT OF THE CASE

### I. Facts

#### A. The displacement of women and girls in sports

Across the country, male athletes who identify as female have increasingly competed in women’s sports and displaced female competitors.

For example, from 2017–2020, two male athletes in Connecticut won a combined 15 states championships in women’s track and set 17 individual records. Def.-Intervenor’s App. in Supp. of Mot. for Summ. J. (“App.”) at 37 (¶ 25); 43 (¶ 22), *In re B.P.J.*, No. 2:21-cv-00316 (S.D. W. Va. Apr. 21, 2022), attached as Exhibit A. Female athlete Chelsea Mitchell lost to these males on more than 20 different occasions. *Id.* at 12 (¶ 14). Yet when her mother complained, school and state officials repeatedly told her that “girls have the right to participate, not to win.” *Id.* at 29 (¶ 41).

In Hawaii, a “male athlete dominated ... varsity girls’ volleyball in the 2019–2020 season” on the island of Maui. *Id.* at 52 (¶ 23). Girls competing against the male athlete “felt demoralized,” and “wondered why they should even bother playing.” *Id.* (¶ 24). The same male athlete competed in track, causing a female athlete to say she was going to quit after the male athlete raced in her event. *Id.* at 57 (¶ 19).

Male athletes have similarly displaced females at the collegiate level. In 2018, CeCe Telfer competed on the Franklin Pierce University’s women’s track team after previously competing on the men’s team. *Id.* at 162 (¶ 135). That year, Telfer won an NCAA championship after placing first in the women’s 400-meter hurdles. *Id.* at 81.

June Eastwood competed for the University of Montana’s men’s cross country and track teams for three seasons before switching to the women’s teams in 2019. *Id.* at 61 (¶ 14), 72 (¶ 15). Female athletes Madison Kenyon, Mary Marshall, and Haley Tanne lost to Eastwood on nine different occasions combined. *Id.* at 61–62 (¶¶ 15–21), 67 (¶ 11), 73 (¶ 16). For these women, the experience was “deflating,” “discouraging,” “frustrating,” and left them feeling “defeated.” *Id.* at 61 (¶ 17), 62 (¶ 18), 67 (¶ 13), and 73 (¶ 21).

Lia Thomas was a male swimmer on the University of Pennsylvania’s women’s swim team. Last season, Thomas famously became an NCAA champion in the 500-yard freestyle, defeating an Olympic silver

medalist, who finished second.<sup>5</sup>

In response to these situations, numerous schools and states have enacted specific policies to ensure that membership in athletic teams is assigned only by biological sex. Indeed, as of June 2022, 18 states—Alabama, Arizona, Arkansas, Florida, Idaho, Indiana, Iowa, Kentucky, Louisiana, Mississippi, Montana, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, Utah, and West Virginia—have enacted a “Save Women’s Sports Act” to that effect. Family Policy Alliance, Map of States with laws that Save Girls’ Sports, <https://bit.ly/3Jb71v8>. International sports bodies such as FINA, swimming’s world governing body, and the International Rugby League have also studied the science and concluded that male athletes who have already gone through puberty may not participate in women’s athletic events because of unfair physical advantages. Mike Hytner, *Rugby league joins swimming in barring transgender women from female international competition*, The Guardian (June 20, 2022), <https://bit.ly/3XuJA49>.

## **B. President Biden and the Department redefine Title IX.**

Ignoring the inherent unfairness to women athletes, President Biden released an Executive Order in January 2021, stating that laws that prohibit sex discrimination, including Title IX, now prohibit discrimination based on sexual orientation and gender identity. Exec.

---

<sup>5</sup> Lia Thomas, Wikipedia, [https://en.wikipedia.org/wiki/Lia\\_Thomas](https://en.wikipedia.org/wiki/Lia_Thomas).

Order No. 13,988, 86 Fed. Reg. 7023 (Jan. 20, 2021). The Department of Education (Department) published the “Interpretation” cited above, *supra* note 3. In this notice, the Department stated its current view that “Title IX Prohibits Discrimination Based on Sexual Orientation and Gender Identity.” *Id.* The next day, the Civil Rights Division of the Department of Justice (DOJ) and the Office of Civil Rights (OCR) issued a “Dear Educator” letter reiterating that the Department “will fully enforce Title IX to prohibit discrimination based on sexual orientation and gender identity,” and accompanied by a “fact sheet.” (Together, the “Fact Sheet”, *supra* note 3.) The Fact Sheet defined discrimination under the Department’s new interpretation of Title IX. The Interpretation and Fact Sheet together are referred to here as the “Title IX Mandate.”

**C. A.F. is a female athlete whose rights have been harmed by the Title IX Mandate.**

A.F. is a female athlete at a public school in Arkansas. A.F. Decl. ¶ 2, Ex. C to Intervenor’s Mot. to Intervene, R.51-4, PageID# 432. A.F. plays volleyball, basketball, and intends to compete in track and field at Brookland Junior High School. *Id.* But even at a young age, her favorite sport was basketball. *Id.* ¶ 4. Sports is a large part of A.F.’s life. *Id.* ¶¶ 4–5. Sports is also a family activity for A.F. Her parents were involved in sports growing up, and since a young age she has had a ball in her hands. *Id.* ¶ 4.

A.F. has worked incredibly hard and sacrificed much to play these sports. *Id.* ¶ 20, PageID# 434. The benefits that she reaps from sports stretch far beyond the court or track—she is learning life skills and accessing opportunities that will shape her future. *Id.* ¶ 21. She would love to play sports in college, and earning an athletic scholarship would play a key role in her decision on where to attend college. *Id.* ¶¶ 14, 22, Page ID# 433–34.

A.F. is committed to the integrity of female athletic competition and supports Arkansas’s Fairness in Women’s Sports Act. *Id.* ¶¶ 29–30, Page ID# 435. She was upset to hear about males competing in girls’ sports. *Id.* ¶ 23, Page ID# 434–35. She understands that males have clear physical advantages, like greater strength, height, and endurance. *Id.* ¶ 24, Page ID# 435. A.F. has also experienced and observed males’ athletic domination. *Id.* ¶ 26. A.F. is apprehensive about competing against males in rough contact sports like basketball and getting injured by male athletes.

Beyond safety, A.F. believes it is not fair to force her to compete against males. *Id.* ¶ 31, PageID# 435–36. She is involved in this case to ensure other female athletes have a chance to enjoy the same athletic opportunities. *Id.* ¶ 32. The Department gave A.F. and her parents no opportunity to comment on the Title IX mandate before it was issued.

**D. ACSI's member schools cherish and protect the rights of their female athlete students.**

ACSI promotes excellence in Christian education and equips member schools to do the same. David Bailk Decl. ¶¶ 3–20, Ex. D to Intervenor's Mot. to Intervene, R.51-5, PageID# 439–41. ACSI serves schools at every level of education—from early educational institutions to high schools to colleges and universities. *Id.* ¶¶ 5–7, PageID# 440. All told, ACSI represents thousands of schools with about 500,000 students, including in all 20 Plaintiff States. *Id.*

ACSI and its member schools value athletics as part of the educational experience. *Id.* ¶¶ 19–20, 33, PageID# 441, 444. Member schools offer athletics to its male and female students and promote sports. *Id.* ¶¶ 33–37, PageID# 444. Among other benefits, athletic programs contribute to the schools' brand and reputation, help attract students, and provide social events for its students, alums, and the broader community. *Id.* ¶¶ 38–56, PageID# 444–46. Teams from member schools frequently compete against public high schools, colleges, and universities, for titles, records, and individual championships. *Id.* ¶¶ 58–66, PageID# 446–47.

For ACSI member schools and its female athletes, the Title IX mandate eliminates these athletic benefits. ACSI member schools and its female athletes compete against public schools bound by Title IX in all 20 of the plaintiff States, and in another 15 states beyond. *Id.* But while ACSI member schools only allow females to compete on its female

sports teams, the Title IX mandate requires public schools to allow males to compete in female sports. *Id.* ¶¶ 68–69, PageID# 448. So the mandate puts ACSI’s member schools and its female athletes at a competitive disadvantage. *Id.* ¶¶ 68–89, PageID# 448–51. ACSI member schools cannot fairly, or safely, compete against other public schools in female athletics. *Id.* This causes the female athletes at ACSI member schools to lose the chance to compete on an even playing field. *Id.* ¶¶ 68–91, Page ID# 448–51.

ACSI desired to submit public comments on the Title IX mandate on behalf of the interests of its member schools and their female athletes. *Id.* ¶¶ 25–28, PageID# 442–43. But without a notice and comment period, ACSI was denied that opportunity.

## **II. Proceedings**

On August 30, 2021, the Plaintiff States filed suit against the Department seeking declaratory and injunctive relief against the Title IX mandate. Compl., R.1, PageID# 33–34.<sup>6</sup> The States filed a motion for preliminary injunction on September 2, 2021, and the Department responded and filed a motion to dismiss on September 23rd. Pls.’ Mot. for Prelim. Injunc., R.10, PageID# 120–26; Defs.’ Opp’n, R.48, PageID# 288–339; Defs.’ Mot. to Dismiss, R.49, PageID# 344–45. The motion to

---

<sup>6</sup> The States also challenged a related EEOC mandate. *Id.* Intervenor-Appellees only intervened with claims against the Title IX mandate, and so in this brief they address only that mandate.

dismiss raised objections to the court’s subject matter jurisdiction under Fed. R. Civ. P. 12(b)(1), and it sought to dismiss the States’ APA claims under Rule 12(b)(6). Defs.’ Mot. to Dismiss, R.49, PageID# 344. A.F. and ACSI filed their motion to intervene on October 4. Intervenor’s Mot. to Intervene, R.51, PageID# 380–83. The District Court held oral argument on the motions on November 3. Minute Entry, R.70, PageID# 834.

On July 15, 2022, the District Court granted the motion for preliminary injunction and denied the motion to dismiss. Op., R.86, PageID# 1987. The Department filed its notice of appeal on September 13. Notice of Appeal, R.100, PageID# 2407. The District Court granted A.F. and ACSI’s motion to intervene on September 14. Mem. Op. & Order, R.102, PageID# 2413–27. This Court granted A.F. and ACSI’s motion to intervene on October 6, 2022. CA6 Order, R.10.

### **III. Standard of review**

“We review the district court’s ultimate decision whether to grant a preliminary injunction for abuse of discretion, and we evaluate its legal determinations, ‘including the likelihood of success on the merits,’ with fresh eyes.” *Arizona v. Biden*, 40 F.4th 375, 381 (6th Cir. 2022) (quoting *Union Home Mortg. Corp. v. Cromer*, 31 F.4th 356, 366 (6th Cir. 2022)). “The district court’s determination” to grant a preliminary injunction “will be disturbed only if the district court relied upon clearly erroneous findings of fact, improperly applied the governing law, or

used an erroneous legal standard.” *Liberty Coins, LLC v. Goodman*, 748 F.3d 682, 689 (6th Cir. 2014) (quoting *McNeilly v. Land*, 684 F.3d 611, 614 (6th Cir. 2012)).

This Court reviews the denial of a motion to dismiss *de novo*. *Wild Eggs Holdings, Inc. v. State Auto Prop. & Cas. Ins. Co.*, 48 F.4th 645, 647 (6th Cir. 2022). In evaluating a party’s standing, the Court must “accept as valid the merits of appellees’ legal claims.” *FEC v. Cruz*, 142 S. Ct. 1638, 1647 (2022); *Kentucky v. Yellen*, 54 F.4th 325, 349 (6th Cir. 2022). “[C]ourts must not extend the concept of subject matter jurisdiction . . . to capture other instances in which a court should dismiss or refuse to take a case.” *Moore v. Lafayette Life Ins. Co.*, 458 F.3d 416, 444 (6th Cir. 2006) (citing *Kontrick v. Ryan*, 540 U.S. 443, 455–56 (2004)).

In considering a motion to dismiss under Rule 12(b)(6), the Court must “construe the complaint in the light most favorable to the Plaintiffs and accept all well-pleaded factual allegations as true.” *Phillips v. DeWine*, 841 F.3d 405, 413–14 (6th Cir. 2016). “[T]he complaint must contain ‘enough facts to state a claim to relief that is plausible on its face.’” *Id.* (quoting *Long v. Insight Commc’ns of Cent. Ohio, LLC*, 804 F.3d 791, 794 (6th Cir. 2015), and *Bell Atlantic Corp. v. Twombly*, 550 U.S. 544, 570 (2007)).

## SUMMARY OF THE ARGUMENT

The Court should affirm the District Court’s injunction and its denial of Defendants’ motion to dismiss.

The States had standing to sue because they are directly regulated by the Department’s Title IX mandate. They and their educational entities receive federal funds under Title IX and must comply with the Department’s mandate. There is “little question” that the object of a regulation has standing to challenge it. *West Virginia*, 142 S. Ct. at 2606 (quoting *Lujan*, 504 U.S. at 561–562). Through federal supremacy, the Title IX mandate would override state laws, including those that protect A.F. and female athletes at ACSI’s schools, because those laws require schools to assign membership in athletic teams based on biology and would not allow placement on sports teams by gender identity.

On the merits, the Title IX mandate violates the APA because the Department failed to provide notice and an opportunity for the public to comment. The APA requires that process for rules. 5 U.S.C. § 553. The Title IX mandate is a rule subject to that provision because it does not merely restate a pre-existing obligation—it imposes new rights and duties not contained in Title IX or under *Bostock*, and it orders federal officials to “fully enforce” that requirement. 86 Fed. Reg. at 32,639; *see Mann Constr., Inc. v. United States*, 27 F.4th 1138, 1143 (6th Cir. 2022) (holding an IRS notice required public comment despite the agency characterizing it as a mere interpretive rule).

This Court can also affirm the injunction on alternative grounds because it violated the APA in at least two additional ways. First, the Title IX mandate exceeds the Department’s statutory authority under Title IX. Title IX’s prohibition on sex discrimination does not encompass discrimination on the basis of gender identity or transgender status, and it does not compel states to allow males to compete in female sports. *Adams*, 2022 WL 18003879, at \*18. Rather, Congress was clear that it prohibited discrimination on the basis of sex as a biologically binary term, and the statute exists to protect opportunities for women’s sports—not to force women to compete with men who identify as female.

Finally, the Court may affirm because the Title IX mandate is arbitrary and capricious under the APA. The Department made “a clear error of judgment” and “offered an explanation for its decision that runs counter to the evidence before the agency” when it asserted *Bostock* authorized or required the Title IX mandate. *Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983). And the Department violated its duty under *Department of Homeland Security v. Regents of the University of California*, 140 S. Ct. 1891, 1910–13 (2020), when it failed to consider the reliance interests of women after almost 50 years of Title IX protecting their educational and athletic opportunities, and when it failed to seriously consider alternatives to this mandate.

## ARGUMENT

### I. The States have standing to sue.

#### A. Regulated entities can challenge agency requirements.

The States had standing to sue because they are regulated entities. The Title IX mandate expresses the Department’s “conclusion that Title IX prohibits discrimination based on sexual orientation and gender identity,” and that the Department “will *fully enforce* Title IX to prohibit discrimination based on sexual orientation and gender identity in education programs and activities that receive Federal financial assistance from the Department.” 86 Fed. Reg. at 32,638–39 (emphasis added). The States and their educational entities receive such assistance and are therefore subject to the Department’s enforcement of this mandate. Compl., R.1, PageID# 4–5.

As the Supreme Court recently reaffirmed, “there can be ‘little question’” that regulated entities can sue to challenge a federal agency requirement. *West Virginia*, 142 S. Ct. at 2606 (quoting *Lujan*, 504 U.S. at 561–62). As in that case, “the rule does injure the States, since they are ‘the object of’ its requirement that they more stringently regulate.” *Id.* Here, the Title IX mandate forces the states to “more stringently regulate” by compelling them to allow males to compete in female sports or be deemed to have violated Title IX. What’s more, the Department insists it will fully enforce that mandate against the Plaintiff States.

The basic standard is straightforward: “a regulated individual or entity has standing to challenge an allegedly illegal statute or rule under which it is regulated.” *Corbett v. Transp. Sec. Admin.*, 19 F.4th 478, 483 (D.C. Cir. 2021) (citations omitted). “A petitioner’s standing to seek review of administrative action is usually self-evident if the complainant is an object of the action (or forgone action) at issue.” *Bonacci v. Transp. Sec. Admin.*, 909 F.3d 1155, 1159 (D.C. Cir. 2018) (cleaned up) (quoting *Sierra Club v. E.P.A.*, 292 F.3d 895, 899–900 (D.C. Cir. 2002)). “[R]egulated entities’ standing to challenge the rules that govern them is normally not an issue, because regulatory constraints typically qualify as injury in fact.” *Nat’l Ass’n of Home Builders v. E.P.A.*, 786 F.3d 34, 43 (D.C. Cir. 2015) (cleaned up) (citing *Fund for Animals, Inc. v. Norton*, 322 F.3d 728, 733 (D.C. Cir. 2003)).

Here, the Title IX mandate imposes regulatory constraints on its face because it imposes a new mandate with which the States must comply. It also imposes injuries on the States by overriding their laws that protect women’s opportunities in education in the same way that Title IX had for decades—until the Administration’s actions.

For example, in Arkansas, where A.F. lives and plays sports in public schools, the State has adopted a Fairness in Women’s Sports Act which requires that sex designations for school-sponsored “athletic teams or sports” be “based on biological sex.” Ark. Code Ann. § 6-1-107(c). But the State and public schools in Arkansas must now violate

this law to comply with the Title IX mandate. If a male identifies as a female, the State and the school must treat the male as a female for sports-team assignments or else be in violation of the Title IX mandate, even though that will place them in violation of Ark. Code Ann. § 6-1-107(c). Similar circumstances prevail in the other Plaintiff States, Compl., R.1, PageID# 19–20.

A.F. is also protected individually by Ark. Code Ann. § 6-1-107(c), which ensures she will not be forced to play basketball or similar sports against males identifying as females. The Title IX mandate deprives her and countless other female athletes throughout the 18 States that have enacted the Save Women’s Sports Act. The female athletes at member schools of ACSI who compete in team leagues or regional individual competitions against public school teams and students are likewise protected by these state laws, and similarly injured by the Title IX mandate. The States enacted these laws to protect the common good generally and female athletes in these situations specifically. The States had standing to challenge this mandate.

It is important to note that the APA “imposes a presumption in favor of judicial review.” *Friends of Crystal River v. EPA*, 35 F.3d 1073, 1078 (6th Cir. 1994) (citing *Block v. Cmty. Nutrition Inst.*, 467 U.S. 340, 348–49 (1984)). It would be inconsistent with this presumption for the Court to deny standing to regulated entities such as the States whose laws are curtailed by the Department’s mandate.

The Department cannot credibly claim that it is not enforcing the mandate. As noted above, the Department of Justice filed a Statement of Interest in the *BPJ* case, advocating against West Virginia’s Save Women’s Sports Act. Statement of Interest, *B.P.J.*, R.42, available at [justice.gov/crt/case-document/file/1405541/download](https://justice.gov/crt/case-document/file/1405541/download). In that Statement, the Department took the position that West Virginia cannot enforce its Act because doing so violates Title IX. *Id.* at 1, 5–12.

Moreover, the Department cannot ground its opposition to the States’ standing by improperly assuming that the merits will be decided against the State’s claims. This Court must assume that the States are right on their claims in assessing whether the Title IX mandate causes an injury cognizable under Article III. *Cruz*, 142 S. Ct. at 1647; *Yellen*, 54 F.4th at 349. In other words, this Court cannot deny jurisdiction based on the Department’s argument that Title IX requires the Plaintiff States to treat male athletes who identify as female as though they are female athletes, or that *Bostock* requires that interpretation. To the contrary, the Court must assume the States are right on the merits of their claims for purposes of assessing their standing to sue. It would improperly “extend the concept of subject matter jurisdiction . . . to capture other instances in which a court should dismiss or refuse to take a case” if the Court denied jurisdiction on the theory that the Department is interpreting Title IX or *Bostock* correctly. *Moore*, 458 F.3d at 444.

**B. Title IX does not preclude review under the APA.**

The Department is wrong that Title IX precludes review, either by providing an “adequate alternate remedy” or by expressing Congressional intent to limit jurisdiction.

**1. Appealing a complaint is no adequate remedy to violations of rulemaking standards under the APA.**

The Department cites no case that has used these theories to dismiss a challenge to its Title IX rules by an entity regulated by those rules. Instead, several courts have entertained challenges to the Department’s Title IX rules even by persons not regulated by those rules. *See, e.g., Equity In Athletics, Inc. v. Dep’t of Educ.*, 639 F.3d 91, 99 (4th Cir. 2011) (sports association had standing to challenge Title IX regulations imposing gender equality in federally financed programs); *Victim Rts. L. Ctr. v. Cardona*, 552 F. Supp. 3d 104, 125 (D. Mass. 2021) (university had standing to challenge new Title IX standards for investigating allegations of sexual harassment); *SurvJustice Inc. v. DeVos*, 2019 WL 1434144, at \*7 (N.D. Cal. Mar. 29, 2019) (advocacy groups had standing to challenge Department’s policy regarding enforcement of Title IX).

As in these latter cases, the question of alternate remedies under Title IX usually concerns whether a victim of a Title IX violation can sue the Department or must instead use Title IX’s explicit provision that lets her sue the regulated entity that harmed her. That doctrine

does not apply here, where the States are injured directly by the Department's regulation of them through its illegal mandate.

The Department's radical view of alternate remedies would preclude any judicial review of final rules issued under Title IX, or under any other statute that ensures regulated entities can appeal adverse complaint decisions. This would force all regulated entities to first undergo years of intrusive investigation and enforcement by agency officials before they could ever get their day in court to argue claims that the agency is not capable of deciding—claims that the agency has overstepped its authority in the first place. This outcome would be incompatible with this Court's presumption of judicial review under the APA. *Friends of Crystal River*, 35 F.3d at 1078.

As the District Court correctly concluded, the Department's view is also incompatible with the Supreme Court's repeated insistence that regulated entities need not submit themselves to investigation and enforcement before challenging a governing rule. *See U.S. Army Corps of Eng'rs v. Hawkes Co.*, 578 U.S. 590, 600 (2016) ("parties need not await enforcement proceedings before challenging final agency action"). The "APA provides for judicial review of all final agency actions, not just those that impose a self-executing sanction." *Sackett v. EPA*, 566 U.S. 120, 129 (2012). Prohibiting judicial review of rulemaking, on the premise that regulated entities can simply appeal after years of investigations and adverse findings, will let the federal government

bully states, private entities, and individuals into compliance to avoid the burdens and risks of the complaint process. The government cannot “strong-arm[]” “regulated parties into ‘voluntary compliance’ without the opportunity for judicial review.” *Id.* at 131.

**2. The right to appeal an adverse complaint finding does not negate judicial review of rulemaking.**

The Department is also wrong to argue that in Title IX, Congress intended to deprive courts of APA jurisdiction to challenge Title IX rules. The Supreme Court explained in *Free Enterprise Fund v. Public Company Accounting Oversight Board* that “[p]rovisions for agency review [in a statute] do not restrict judicial review unless the ‘statutory scheme’ displays a ‘fairly discernible’ intent to limit jurisdiction.” 561 U.S. 477, 489 (2010) (quoting *Thunder Basin Coal Co. v. Reich*, 510 U.S. 200, 207 (1994)); *see also Cochran v. SEC*, 20 F.4th 194, 206 (5th Cir. 2021). Title IX’s provision that an entity can appeal an adverse finding does not express any intent to preclude a regulated entity from challenging a Departmental rule that governs it.

The Court should not interpret Title IX as precluding jurisdiction to bring an APA claim, because the Departmental complaint and appeal process is not designed to consider challenges to rules themselves. The Department admits that its investigatory process is focused on whether a regulated entity complied with Title IX and the agency’s rules, involving questions of fact and applications of the rule to the circumstances of

the case. Appellants’ Br. at 5–6, R.27. In contrast, the States’ APA claims concern no facts of a particular case but the legal questions of whether notice and comment was required to issue the Title IX mandate, whether the agency acted arbitrarily and capriciously, and whether it exceeded its statutory authority.

These questions are “wholly collateral to a statute’s review provisions” and are “outside the agency’s expertise.” *Free Enter. Fund*, 561 U.S. at 489 (quoting *Thunder Basin*, 510 U.S. at 212–13). The Department has no designated authority to apply or interpret the APA, such as to decide whether the Title IX mandate required notice and comment or was arbitrary and capricious. And whether Title IX prohibits gender identity discrimination under *Bostock* is not a matter of Departmental expertise: both the statute and *Bostock* do not support that conclusion, as argued below. Agencies lack authority to impose actions of vast importance without clear statutory authority. *See West Virginia*, 142 S. Ct. at 2614. And agencies are not entitled to deference when their lack of statutory authority is clear. *Johnson v. Guzman Chavez*, 141 S. Ct. 2271, 2291 (2021).

The ability to contest and appeal adverse agency findings from a specific complaint gives regulated entities no meaningful review. The Department’s Title IX mandate *requires* its officials to conclude that Title IX prohibits gender identity discrimination. It resolves the question definitively. The States therefore can receive no “meaningful”

review of that question within the Department's process, because the outcome is foreclosed. Nor is the process designed to answer such questions, only inquiries into the facts of specific complaint allegations. Consequently, Congress did not intend to deprive the court of jurisdiction to review APA challenges merely by ensuring that regulated entities can appeal if they lose particular complaint findings.

## **II. The Title IX mandate violates the APA's notice and comment requirements.**

The Department does not contest that it failed to notify the public in advance of its Title IX mandate or offer an opportunity to comment before it was finalized as 5 U.S.C. § 553 requires. Instead, the Department argues that the mandate is not subject to that requirement. The District Court correctly concluded that it was.

The Title IX mandate is a legislative or substantive rule, not merely an interpretive rule, and therefore it is subject to the APA's notice and comment requirement. "Legislative rules impose new rights or duties and change the legal status of regulated parties; interpretive rules articulate what an agency thinks a statute means or remind parties of pre-existing duties." *Mann Constr.*, 27 F.4th at 1143.

Here, the Title IX mandate imposed new rights and duties, not pre-existing ones. There is no statutory prohibition requiring schools to treat males like females and vice versa depending on gender identity—quite the contrary. *Adams*, 2022 WL 18003879, at \*18 ("Title IX allows

schools to provide separate bathrooms [and sports] on the basis of biological sex. ... Whether Title IX should be amended to equate ‘gender identity’ and ‘transgender status’ with ‘sex’ should be left to Congress—not the courts.”). As for *Bostock*, despite the Department’s claim, it does not lead to the conclusion that Title IX be interpreted to contain such a prohibition. *Bostock* explicitly rejected the assertion that its “decision will sweep beyond Title VII to other federal or state laws that prohibit sex discrimination,” and denied that it encompassed situations such as “bathrooms, locker rooms, or anything else of the kind”—anything other than employee hiring and firing. 140 S. Ct. at 1753.

This Court has correctly taken the Supreme Court at its word: “the rule in *Bostock* extends no further than Title VII.” *Pelcha v. MW Bancorp, Inc.*, 988 F.3d 318, 324 (6th Cir. 2021). “Title VII differs from Title IX in important respects.” *Meriwether v. Hartop*, 992 F.3d 492, 510 n.4 (6th Cir. 2021). Consequently, the Title IX mandate is (at best) an *extension* of *Bostock*—and as an extension, it imposes new duties, not pre-existing ones, and therefore is legislative and substantive.

This Court’s admonition in *Ford Motor Company v. EPA* applies with similar force here: “[a]d hoc national policy determinations developed through internal agency memoranda standing alone without promulgating regulations or guidelines through public notice and/or an opportunity for a public hearing, are not proper procedures.” 567 F.2d 661, 671–72 (6th Cir. 1977).

### **III. The mandate exceeds the Department's statutory authority.**

This Court can also affirm the injunction under the alternative ground argued in the States' motion that the Title IX mandate exceeds the Department's statutory authority in violation of the APA, 5 U.S.C. § 706(2)(C). The Court "may properly review any reason advanced by [plaintiff] in support of the district court's preliminary injunction that was presented to the district court." *United Food & Com. Workers Union, Loc. 1099 v. Sw. Ohio Reg'l Transit Auth.*, 163 F.3d 341, 349 n.3 (6th Cir. 1998).

The States presented to the District Court the argument that the Department lacks authority under Title IX to issue this mandate. States' Mem. in Supp. of Mot. for Prelim. Inj., R.11, PageID# 147–52. Title IX does not require the States to treat males as females, and it prohibits a mandate forcing schools to allow males to compete in female athletic events. Imposing this mandate violates Title IX and the major questions doctrine.

#### **A. Title IX prohibits sex discrimination, it does not mandate sex blindness.**

Title IX prohibits treating one sex worse than the other sex. Still, it does not deem all sex distinctions as discriminatory, and it sometimes requires sex distinctions to achieve its mandate.

**1. Title IX prohibits treating one sex worse than the other sex.**

“To interpret a statute, we start with the text. When ‘the text is clear, that is the end of the matter.’” *T.M. v. DeWine*, 49 F.4th 1082, 1089 (6th Cir. 2022) (quoting *Keen v. Helson*, 930 F.3d 799, 805 (6th Cir. 2019)). The Court should also be mindful that “[s]tatutes must ‘be read as a whole.’” *United States v. Atl. Rsch. Corp.*, 551 U.S. 128, 135 (2007) (quoting *King v. St. Vincent’s Hosp.*, 502 U.S. 215, 221 (1991)).

Title IX says no person “shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity.” 20 U.S.C. § 1681(a). “Discrimination” refers to “failure to treat all persons equally when no reasonable distinction can be found between those favored and those not favored.” *CSX Transp., Inc. v. Ala. Dep’t of Revenue*, 562 U.S. 277, 286 (2011) (quoting Black’s Law Dictionary 420 (5th ed. 1979)); *Bostock*, 140 S. Ct. at 1740 (“To ‘discriminate against’ a person, then, would seem to mean treating that individual worse than others who are similarly situated.”).<sup>7</sup> “[S]ubject[ing]” someone to discrimination “on the

---

<sup>7</sup> Courts interpret discrimination to require differential treatment of similarly situated persons in many different contexts. *Dawson v. Steager*, 139 S. Ct. 698, 703 (2019) (“A State violates [a statute prohibiting discriminatory taxation of federal employees] when it treats retired state employees more favorably than retired federal employees and no ‘significant differences between the two classes’ justify the differential treatment.”); *cf. United States v. Washington*, 142 S. Ct. 1976, 1984 (2022) (a state “discriminates against the Federal Government or its contractors” under the Constitution “if it ‘singles

basis of sex,” 20 U.S.C. § 1681(a), must mean subjecting someone to “differential” or “less favorable” treatment because of their sex (and without a legally justifiable reason for doing so). *Jackson v. Birmingham Bd. of Educ.*, 544 U.S. 167, 174 (2005).

Add to this that educational programs cannot exclude persons from participation in or deny them the benefits of an activity because of their sex. 20 U.S.C. § 1681(a); *see also Davis v. Monroe Cnty. Bd. of Educ.*, 526 U.S. 629, 650 (1999) (“[Title IX’s] other prohibitions ... help give content to the term ‘discrimination.’”). So Title IX prohibits treating women worse than men, or treating men worse than women, in the educational context.

## 2. Not all sex *distinctions* are “discrimination.”

Not all sex distinctions are harmful or treat one sex worse than the other, because men and women are sometimes differently situated. The “[p]hysical differences between men and women ... are enduring: the two sexes are not fungible.” *United States v. Virginia (VMI)*, 518 U.S. 515, 533 (1996) (cleaned up). This distinction is “immutable,” “determined solely by the accident of birth.” *Frontiero v. Richardson*, 411 U.S. 677, 686 (1973).

For example, “[m]en and women simply are not physiologically the

---

them out’ for less favorable ‘treatment,’ ... or if it regulates them unfavorably on some basis related to their governmental ‘status’” (cleaned up)).

same for the purposes of physical fitness programs,” because “equally fit men and women demonstrate their fitness differently.” *Bauer v. Lynch*, 812 F.3d 340, 350–51 (4th Cir. 2016) (finding sex-specific FBI training requirements did not violate Title VII). Society also approaches anatomical differences between the sexes differently, such as in nudity ordinance distinctions between covering breasts, which nevertheless do “not discriminate against women solely on the basis of gender.” *Hang On, Inc. v. City of Arlington*, 65 F.3d 1248, 1257 (5th Cir. 1995); *accord Eline v. Town of Ocean City*, 7 F.4th 214, 221 (4th Cir. 2021) (law may prohibit only women from going topless to “protect[] the moral sensibilities of ... society”). That is why this Court has already recognized that “under Title IX, universities must consider sex in allocating athletic scholarships, and may take it into account in ‘maintaining separate living facilities for the different sexes.’” *Meriwether*, 922 F.3d at 510 n.4 (citing 34 C.F.R. § 106.37(c) and quoting 20 U.S.C. § 1686).

The Eleventh Circuit, sitting *en banc*, recently concluded that Title IX does not prohibit separate bathroom facilities based on biological sex. “Title IX, unlike Title VII, includes express statutory and regulatory carve-outs for differentiating between the sexes when it comes to separate living and bathroom facilities.” *Adams*, 2022 WL 18003879, at \*14. Interpreting Title IX to prohibit discrimination based on “gender identity when gender identity does not match sex,” as the

Department's Title IX mandate does, "cannot comport with the plain meaning of 'sex' at the time of Title IX's enactment and the purpose of Title IX and its implementing regulations, as derived from their text." *Id.* at \*16.

Therefore, it is consistent with Title IX's text that Title IX's regulations on situations like locker rooms and showers allow for "separate toilet, locker room, and shower facilities on the basis of sex" provided the facilities are comparable for each sex. 34 C.F.R. § 106.33. Likewise in sports, "due to average physiological differences, males would displace females to a substantial extent if they were allowed to compete" for the same teams. *Clark v. Ariz. Interscholastic Ass'n*, 695 F.2d 1126, 1131 (9th Cir. 1982). Indeed, "the great bulk of the females would quickly be eliminated from participation and denied any meaningful opportunity for athletic involvement," without distinct teams. *Cape v. Tenn. Secondary Sch. Athletic Ass'n*, 563 F.2d 793, 795 (6th Cir. 1977) (per curiam). That's why women's-only teams are part of "a long-standing tradition in sports of setting up classifications whereby persons having objectively measured characteristics likely to make them more proficient are eliminated from certain classes of competition." *Petrie v. Ill. High Sch. Ass'n*, 394 N.E.2d 855, 861 (Ill. App. Ct. 1979).

These differences also matter for safety. That's why World Rugby recently issued guidelines excluding biological males (who have

experienced puberty) from women’s rugby because “safety and fairness cannot presently be assured for women competing against transwomen in contact rugby.”<sup>8</sup> And the women’s category was created “to ensure protection, safety and equality” for those who do not benefit from males’ biological advantages.<sup>9</sup> *See also Kleczek v. R.I. Interscholastic League, Inc.*, 612 A.2d 734, 739 (R.I. 1992) (per curiam) (“distinguishing between boys and girls in interscholastic sports will help promote safety”).

Title IX’s regulations correctly acknowledge these biological differences. They allow sex-separated teams “where selection for such teams is based upon competitive skill or the activity involved is a contact sport.” 34 C.F.R. § 106.41(b). They also allow sex separation in “physical education classes or activities during participation in wrestling, boxing, rugby, ice hockey, football, basketball, and other sports the purpose or major activity of which involves bodily contact.” *Id.* § 106.34(a)(1).

### **3. Title IX sometimes requires sex distinctions to fulfill its mandate.**

Sports show that Title IX doesn’t just allow sex distinctions; Title IX sometimes requires it. Again, start with the text. Title IX doesn’t

---

<sup>8</sup> Media Release, *World Rugby approves updated transgender participation guidelines*, World Rugby (Oct. 9, 2020), <https://perma.cc/GHG6-LGN5>.

<sup>9</sup> World Rugby, *Transgender Women Guidelines*, <https://perma.cc/HP6H-6NCV>.

stop at unjustified discrimination but states no person “shall, on the basis of sex, be excluded from participation in [or] be denied the benefits of ... any education program or activity.” 20 U.S.C. § 1681(a).

Practically everyone agrees males would displace females in activities like soccer and track if both sexes were forced to compete against one another. For example, the Southern District of West Virginia recently observed that, “There is no serious debate that Title IX’s endorsement of sex separation in sports refers to biological sex.” *B.P.J.*, 2023 WL 111875, at \*9. “[T]ransgender girls are biologically male. Short of any medical intervention that will differ for each individual person, biological males are not similarly situated to biological females for purposes of athletics.” *Id.* See also *Clark*, 695 F.2d at 1131; *Cape*, 563 F.2d at 795; *Petrie*, 394 N.E.2d at 861.

“[F]ailing to field women’s varsity teams ... certainly creates a barrier for female students” to participate in athletics. *Pederson v. La. State Univ.*, 213 F.3d 858, 871 (5th Cir. 2000). That means “the mere opportunity for girls to try out” for a team is not enough if they don’t stand a realistic chance of making the roster because of competition from men. *Williams v. Sch. Dist. of Bethlehem*, 998 F.2d 168, 175 (3d Cir. 1993). And the mere opportunity to participate also isn’t enough if they don’t have a realistic chance to win scholarships or “enjoy the thrill of victory” because the sport is dominated by men. *Neal v. Bd. of Trs. of Cal. State Univs.*, 198 F.3d 763, 773 (9th Cir. 1999).

Hence, Title IX’s regulations correctly require schools to provide “equal athletic opportunity for members of both sexes,” including in “the selection of sports and levels of competition” necessary to “effectively accommodate the interests and abilities of members of both sexes.” 34 C.F.R. § 106.41(c). As Title IX’s principal sponsor put it, sometimes sex segregation is “absolutely necessary to the success of the program—such as in classes for pregnant girls or emotionally disturbed students, in sports facilities or other instances where personal privacy must be preserved.” 118 Cong. Rec. 5807 (1972) (statement of Sen. Beyh).

In any sport that requires athleticism, women “are generally at a substantial physical disadvantage” compared to men. *Petrie*, 394 N.E.2d at 861 (discussing volleyball). That was obvious after one school eliminated its women’s varsity wrestling team and gave the female wrestlers the opportunity to continue, “conditioned on their ability to beat male wrestlers in their weight class, using men’s collegiate wrestling rules.” *Mansourian v. Regents of Univ. of Cal.*, 602 F.3d 957, 962 (9th Cir. 2010). “As a result ... the female students were unable to participate on the wrestling team and lost the benefits associated with varsity status, including scholarships and academic credit.” *Id.*

Female athletes protected by Title IX benefit from “real opportunities, not illusory ones.” *Williams*, 998 F.2d at 175. To provide women with equal opportunities, schools must field women’s-only teams so women have the chance to compete, win, and become champions in their

sport. *See Pederson*, 213 F.3d at 878 (explaining that “of course fewer women participate in sports” when a school “refus[es] to offer them comparable athletic opportunities to those it offers its male students”). That is what Title IX is all about.

**B. Because Title IX allows sex distinctions, it only deals with biological sex, not sexual orientation or gender identity.**

Given that Title IX acknowledges and accommodates the differences between the sexes, it naturally follows that Title IX deals only with biological sex. The Title IX mandate is incompatible with Title IX’s (1) text, (2) structure, and (3) purpose. Further, (4) *Bostock* doesn’t apply to Title IX.

**1. Title IX’s original, ordinary meaning is about biological sex.**

Title IX’s text doesn’t say anything about sexual orientation or gender identity. It prohibits discrimination only “on the basis of sex.” 20 U.S.C. § 1681(a). Sexual orientation and “transgender status are distinct concepts from sex.” *Bostock*, 140 S. Ct. at 1746–47. For persons who identify as transgender, their biological sex and gender identity are not aligned. “Sex” cannot fully encompass all these terms at once.

Because “sex” is not defined in the statute, it should be interpreted according to its ordinary meaning “at the time Congress enacted the statute.” *New Prime Inc. v. Oliveira*, 139 S. Ct. 532, 539 (2019) (citation omitted). “[T]he overwhelming majority of dictionaries

defin[ed] ‘sex’ on the basis of biology and reproductive function” in 1972 when Title IX was enacted. *Adams*, 2022 WL 18003879, at \*15. At that time, “‘sex’ was commonly understood to refer to physiological differences between men and women — particularly with respect to reproductive functions. *Neese v. Becerra*, 2022 WL 1265925, at \*12 (N.D. Tex. Apr. 26, 2022). “There is no serious debate that Title IX’s endorsement of sex separation in sports refers to biological sex.” *B.P.J.*, 2023 WL 111875, at \*9. “In summary, . . . we read ‘sex’ in Title IX to mean ‘biological sex.’” *Adams*, 2022 WL 18003879, at \*16.

## **2. Title IX’s structure points to biological sex.**

“It is a fundamental canon of statutory construction that the words of a statute must be read in their context and with a view to their place in the overall statutory scheme.” *West Virginia*, 142 S. Ct. at 2607 (quoting *Davis v. Mich. Dep’t of Treasury*, 489 U.S. 803, 809 (1989)). “A sign that says ‘men only’ looks very different on a bathroom door than a courthouse door.” *Adams*, 2022 WL 18003879, at \*5 (quoting *City of Cleburne v. Cleburne Living Ctr.*, 473 U.S. 432, 468–69 (1985) (Marshall, J.)).

Throughout Title IX, “sex” is used as a binary concept, encapsulating only male and female. For example, Title IX allows schools in certain circumstances to change “from being an institution which admits only students of *one sex* to being an institution which admits students of *both sexes*.” 20 U.S.C. § 1681(a)(2) (emphasis added). The

statute also exempts “father-son or mother-daughter activities ... but if such activities are provided for students of *one sex*, opportunities for reasonably comparable activities shall be provided for students of *the other sex*.” *Id.* § 1681(a)(8) (emphases added).

Not only do these provisions speak of “the” other sex or “both sexes,” rather than “another” sex or “all sexes,” they also use terms like “father-son” and “mother-daughter” which are rooted in biology. At the time, mother was defined as “a female parent,” Webster’s Third New International Dictionary 1474 (1968); “father” as “a male parent,” *id.* at 828; “son” as a “male offspring,” *id.* at 2172; and “daughter” as “a human female,” *id.* at 577. This makes no sense if “sex” includes the non-binary concept of gender identity.

If sex included concepts like a person’s gender identity, Title IX’s regulations would not make sense either. They correctly allow for separate locker rooms and showers, *supra* § I.B, so long as facilities “for students of *one sex*” are comparable to “facilities provided for students of *the other sex*.” 34 C.F.R. § 106.33 (emphases added). In sports, the regulation allows schools to “sponsor separate teams for members of *each sex*.” *Id.* § 106.41(b) (emphasis added). And schools must “provide equal athletic opportunity for members of *both sexes*” to “effectively accommodate the interests and abilities of members of *both sexes*.” *Id.* § 106.41(c) (emphases added).

The list goes on. Title IX or its regulations exempt institutions

“traditionally” limited to “only students of one sex,” 20 U.S.C. § 1681(a)(5); “youth service organizations” traditionally “limited to persons of one sex,” *Id.* § 1681(a)(6)(B); “living facilities for the different sexes,” 20 U.S.C. § 1686; “separation of students by sex within physical education classes” for sports chiefly involving bodily contact, 34 C.F.R. § 106.34(a)(1); and human sexuality classes and choirs separated by “sex,” *Id.* § 106.34(a)(3)–(4). Title IX and its regulations only make sense against a binary, biological backdrop. The regulatory regime is nonsensical if applied to the many dozens and dozens of gender identities or to individuals who claim to be gender fluid, the practice “in which some individuals claim to change gender identities associated with the male and female sexes and thereby treat sex as a mutable characteristic.” *Adams*, 2022 WL 18003879, at \*7 n.6.

In contrast, if the Title IX mandate is correct, schools could not use a biology-based classification to separate physical education classes involving sports like boxing and rugby. *See* 34 C.F.R. § 106.34(a)(1); *see also infra* § II.C (explaining that sex-separated sports only exist to accommodate physiological differences between the sexes). Indeed, the regulatory exemptions would affirmatively bless heterosexual-only choirs, *see* 34 C.F.R. § 106.34(a)(4), or living facilities for gays only, *see* 20 U.S.C. § 1686, while prohibiting “otherwise permissible sex-based carve-outs when the carve-outs come into conflict with a transgender person’s gender identity.” *Adams*, 2022 WL 18003879, at \*16. These

exemptions only make sense if they are rooted in biology, not identity or orientation.

**3. Title IX’s purpose is to promote equality based on biological sex.**

The Title IX mandate is at odds with Title IX’s purpose, too. A text “cannot be divorced from the circumstances existing at the time [the statute] was passed, and from the evil which Congress sought to correct and prevent.” *United States v. Champlin Refin. Co.*, 341 U.S. 290, 297 (1951). And naturally, “a textually permissible interpretation that furthers rather than obstructs the document’s purpose should be favored.”<sup>10</sup> Understanding a document’s “overarching purpose,” which is “evident in the text” itself, is an intuitive part of interpreting the statute. *AT&T Mobility LLC v. Concepcion*, 563 U.S. 333, 344 (2011).

“The circumstances and the evil” that motivated Title IX “are well-known.” *Champlin*, 341 U.S. at 297. Numerous courts have recognized that “Title IX was enacted in response to evidence of pervasive discrimination against women with respect to educational opportunities.”<sup>11</sup> *McCormick v. Sch. Dist. of Mamaroneck*, 370 F.3d 275, 286 (2d Cir. 2004); *Cannon v. Univ. of Chi.*, 441 U.S. 677, 704 & n.36 (1979). This

---

<sup>10</sup> Antonin Scalia & Bryan A. Garner, *Reading Law: The Interpretation of Legal Texts* 63 (2012).

<sup>11</sup> “[W]hatever approach” cases like *McCormick* or *Cannon* “may have used” to deduce Title IX’s purpose, we may rely on them as “an integral part of our jurisprudence” on Title IX. *Bray v. Alexandria Women’s Health Clinic*, 506 U.S. 263, 286 n.17 (1993).

has nothing to do with sexual orientation or gender identity, particularly since “gender identity” was “a concept that was essentially unknown” 50 years ago. *Bostock*, 140 S. Ct. at 1755 (Alito, J., dissenting); *see also id.* at 1772 (“The term ‘transgender’ is said to have been coined ‘in the early 1970s.’” (cleaned up)).

Sports prove the point. “[G]irls and women were historically denied opportunities for athletic competition based on stereotypical views that participating in highly competitive sports was not ‘feminine’ or ‘ladylike.’” *McCormick*, 370 F.3d at 295. “Male athletes had been given an enormous head start.” *Neal*, 198 F.3d at 767. So at the behest of Congress, Title IX’s sports regulations aimed “to level the proverbial playing field,” *id.*, and required that covered programs “shall provide equal athletic opportunity for members of both sexes.” 34 C.F.R. § 106.41(c). “[I]t would require blinders to ignore that the motivation for promulgation of the regulation on athletics was the historic emphasis on boys’ athletic programs to the exclusion of girls’ athletic programs in high schools as well as colleges.” *Williams*, 998 F.2d at 175.

For this reason the Title IX mandate would reverse decades of progress under Title IX by ignoring the statute’s biology-based remedial scheme. Men and women are differently situated in sports because of the average physiological differences between the sexes. *See supra* § I.B. Sex-separated teams exist to accommodate these differences. *Id.* Take that biological distinction away and there’s no justification for sex-

separated teams in the first place. To give women “real opportunities,” rather than participation trophies, schools must offer women-only teams. *Williams*, 998 F.2d at 175. Title IX accomplishes this by focusing on biology, and neither the statute’s text nor purpose support the Department’s mandate.

#### 4. ***Bostock* is inapposite.**

Without support in Title IX’s plain text, structure, or purpose, the Title IX mandate relies extensively on misconstruing *Bostock*. But *Bostock* limited its holding. The Supreme Court held that differential treatment based on sexual orientation or gender identity in the employment context violates Title VII. *Bostock*, 140 S. Ct. at 1741. The Court then specifically disclaimed any application outside the Title VII employment context. *Id.* at 1753. Even under the same statute, the Court declined to extend its holding to “bathrooms, locker rooms, or anything else of the kind.” *Id.* For this reason, this Court has held that “the rule in *Bostock* extends no further than Title VII.” *Pelcha*, 988 F.3d at 324.

In addition, *Bostock*’s analysis does not work under Title IX. “Title VII differs from Title IX in important respects.” *Meriwether*, 992 F.3d at 510 n.4. Though sex is irrelevant to hiring or firing decisions, “athletics differs from . . . employment in analytically material ways.” *Cohen v. Brown Univ.*, 101 F.3d 155, 177 (1st Cir. 1996); *see supra* § I.B. So “it does not follow that principles announced in the Title VII context

automatically apply in the Title IX context.” *Meriwether*, 992 F.3d at 510 n.4; *Neal*, 198 F.3d at 772 n.8 (Title VII “precedents are not relevant in the context of collegiate athletics. Unlike most employment settings, athletic teams are gender segregated[.]”); *Cohen*, 101 F.3d at 177 (“It is imperative to recognize that athletics presents a distinctly different situation from ... employment and requires a different analysis in order to determine the existence *vel non* of discrimination.”).

Again, sports prove the point. Applying *Bostock*’s reasoning under Title IX would mean Title IX forbids schools’ taking sex into consideration (even in part) when they field a soccer team.<sup>12</sup> But “athletics programs *necessarily* allocate opportunities separately for male and female students.” *Cohen*, 101 F.3d at 177. And because males would largely displace females in sports if they were forced to compete against one another, the Title IX mandate would be the death knell of women’s sports. *See Adams*, 2022 WL 18003879, at \*19 (Lagoa, J., dissenting) (accepting the Department’s interpretation would “threaten

---

<sup>12</sup> Ironically, the Title IX mandate *forces* the States to differentiate based on gender identity by excluding student-athletes from participating on the women’s or men’s teams based solely on gender identity. Presumably, this would force female athletes who identify as male to compete against males—even if they have the physiological characteristics of a typical female and desire to compete on the women’s team. That makes little sense in light of Title IX’s text, structure, and purpose. *Griffin v. Oceanic Contractors, Inc.*, 458 U.S. 564, 575 (1982) (“[I]nterpretations of a statute which would produce absurd results are to be avoided if alternative interpretations consistent with the legislative purpose are available.”).

to undermine one of Title IX’s major achievements, giving young women an equal opportunity to participate in sports.”) (quotation omitted).

The Title IX mandate would make it impossible to police males’ participation in women’s sports, because “the transgender community is not a monolith in which every person wants to take steps necessary to live in accord with his or her preferred gender (rather than his or her biological sex).” *Doe 2 v. Shanahan*, 917 F.3d 694, 722 (D.C. Cir. 2019) (Williams, J., concurring); *see also id.* at 701 (Wilkins, J., concurring) (same). Major governing sports bodies that allow males to participate in women’s sports only do so for males who have taken puberty blockers or suppressed their testosterone. As noted above, World Rugby only allows males to participate if they have never experienced male puberty. And organizations like the NCAA that promote inclusion acknowledge that males’ participation in women’s sports based solely on gender identity is untenable.<sup>13</sup> But even these regulations would violate the Department’s interpretation of Title IX because they would still exclude *some* males (who identify as female) from the women’s category.

---

<sup>13</sup> The NCAA previously allowed males who identified as transgender and suppressed their testosterone for one year to compete in women’s sports. *2010 NCAA Policy on Transgender Student-Athlete Participation*, <https://perma.cc/J5WY-7A67>. The NCAA recently abandoned this policy for a “sport-by-sport approach” that will become effective this fall. *NCAA Transgender Student-Athlete Participation Policy*, <https://perma.cc/AV9C-EE4X>.

Of course, even regulations that try to include biological males in women's sports do not mitigate males' biological advantages.<sup>14</sup> The Title IX mandate is even more problematic, since every male who identifies as female would get to participate in women's sports regardless of medical interventions or athletic ability. The results would be predictable. This was the policy in Connecticut which allowed two biological males to dominate girls' track events for several years, as described in detail above.

The Title IX mandate would make sex-separated bathrooms, locker rooms, and showers illegal, too. *Adams*, 2022 WL 18003879, at \*18 (“affirming the district court’s order, and equating ‘sex’ with ‘gender identity’ or ‘transgender status’ for purpose of Title IX, would, at the very least, generally impact living facilities, locker rooms, and showers, in addition to bathrooms, at schools across the country—affecting students in kindergarten through the post-graduate level”).

### **5. The mandate violates the major questions doctrine.**

Imposing the Title IX mandate also violated the major questions doctrine because the mandate implicates questions of vast economic and political significance and lacks clear statutory authority.

---

<sup>14</sup> See *supra* note 9 (World Rugby regulations); see also Emma N. Hilton & Tommy R. Lundberg, *Transgender Women in the Female Category of Sport: Perspectives on Testosterone Suppression and Performance Advantage*, 51 Sports Med. 199–214 (2021), <https://doi.org/10.1007/s40279-020-01389-3> (reviewing literature).

“[C]ourts ‘expect Congress to speak clearly if it wishes to assign to an agency decisions of vast economic and political significance.’” *West Virginia*, 142 S. Ct. at 2605 (quoting *Util. Air Regul. Grp.*, 573 U.S. at 324). The Court must view with “skepticism” a federal agency claiming to impose such a mandate, especially where it is inconsistent with the “history and the breadth of the authority that [the agency] has asserted.” *Id.* at 2608. Congress does not confer “sweeping and consequential authority ‘in so cryptic a fashion.’” *Id.* (quoting *FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 123 (2000)). “[I]t is not plausible that Congress gave” an agency the authority to “force a nationwide transition away from” a longstanding approach “of such magnitude and consequence” unless Congress provides “a clear delegation” to do just that. *Id.* at 2616. And this principle is particularly strong in the context of a Spending Clause statute like Title IX which—unlike the Title VII statutory regime at issue in *Bostock*—is akin to a contract where “[t]he legitimacy of Congress’ power to legislate under the spending power thus rests on whether the State voluntarily and knowingly accepts the terms of the ‘contract.’” *Pennhurst State Sch. & Hosp. v. Halderman*, 451 U.S. 1, 17 (1981).

The Title IX mandate is a radical change of vast economic and political consequence—with no clear statutory authorization. The

Department oversees almost \$90 billion in federal funds each year.<sup>15</sup> Collectively, borrowers owe over \$1.6 trillion in federal student loans.<sup>16</sup> Attaching the Title IX mandate to every dollar of federal financial assistance in education is therefore a decision of incalculable economic significance.

It is also a decision of monumental political significance. As discussed above, Title IX's purpose of leveling the educational playing field for women—defined biologically—is “well-known.” *See Champlin*, 341 U.S. at 297; *Bostock*, 140 S. Ct. at 1755 (Alito, J., dissenting). There is vast significance to the decision to transform the Title IX regulatory regime from one in which women have protection from males unfairly taking away their educational opportunities, athletic fairness, and intimate privacy, into one where women must compete with males for those benefits.

Yet this mandate is one Congress did not authorize in Title IX—certainly not in the clear way the Supreme Court requires. As noted, not only did “sex” not mean gender identity or transgender status in 1972, but Title IX, and decades of its regulations, are permeated with biologically binary language about males and females. There is no basis to believe that in Title IX Congress gave “a clear delegation” for the

---

<sup>15</sup> *See Agency Profile: Department of Education (ED)*, USASpending.gov, <https://www.usaspending.gov/agency/departments-of-education?fy=2023>.

<sup>16</sup> Melanie Hanson, *Student Loan Debt Statistics*, EducationData.org (Oct. 26, 2022), <https://educationdata.org/student-loan-debt-statistics>.

Department to decide that, after nearly 50 years, males who identify as female must now be treated as females under all aspects of Title IX, including women’s athletics. *West Virginia*, 142 S. Ct. at 2616. Only Congress can authorize the Department’s Title IX mandate, and it did not “speak clearly” to do so. *Id.* at 2605.

#### **IV. The mandate is arbitrary and capricious.**

Finally, this Court can affirm the injunction on the alternative ground that the Department’s Title IX mandate is arbitrary and capricious under the APA. 5 U.S.C. § 706(2)(A). *See* States’ Mem. in Supp. of Mot. for Prelim. Inj., R.11, PageID# 146–47 (arguing the Title IX mandate is arbitrary and capricious under the APA). Two points illustrate the arbitrary and capricious nature of the mandate.

##### **A. The mandate relies on an erroneous view of *Bostock*.**

First, the Department’s mandate is overwhelmingly based on its erroneous extension of *Bostock* to Title IX. 86 Fed. Reg. at 32,637–39. Indeed, the mandate references *Bostock* 21 times in four pages, and the Department even put *Bostock* in the title of the document. *Id.* The Department declared that *Bostock* both “guides” and “leads to the conclusion” set forth in the mandate. *Id.* at 32,638. Likewise, the mandate relied on an interpretation of Title IX issued by this administration’s Department of Justice—which also explicitly relied on *Bostock*. *Id.* at 32,639. In short, without this view of *Bostock*, there would be no mandate.

But as explained at length above, the Department’s view of *Bostock* is wrong. *See supra* § III.B.4; *accord Adams*, 2022 WL 18003879, at \*14 (courts “cannot, as the Supreme Court did in *Bostock*, decide only whether discrimination based on transgender status necessarily equates to discrimination on the basis of sex .... This is because Title IX, unlike Title VII, includes express statutory and regulatory carve-outs for differentiating between the sexes when it comes to separate living and bathroom facilities, among others,” including sports) (citation omitted).

The Department’s decision to issue a nationwide mandate based on a Supreme Court opinion but contrary to that opinion’s self-expressed limitations is the definition of arbitrary and capricious. It is a serious, “clear error of judgment” that renders the agency action not just wrong but legally infirm. *State Farm*, 463 U.S. at 43 (citation omitted). In this case, the Department “offered an explanation for its decision that runs counter to the evidence before the agency,” because *Bostock* explicitly disavows its extension to Title IX. *Id.* Issuing this mandate based on *Bostock* is “a clear and prejudicial violation of applicable” legal standards—that is, of *Bostock* itself. *McDonald Welding v. Webb*, 829 F.2d 593, 595 (6th Cir. 1987). Therefore the States are likely to succeed on the merits of their claim that the Title IX mandate is arbitrary and capricious under the APA.

**B. The mandate failed to consider reliance interests and alternatives.**

The Title IX mandate is also arbitrary and capricious under the APA because the Department—driven by its unswerving devotion to rewriting Title IX—failed to consider reliance interests and possible alternatives.

“[A]gency action is lawful only if it rests on a consideration of the relevant factors.” *Michigan v. EPA*, 576 U.S. 743, 750 (2015) (citation omitted). Agency action is arbitrary and capricious under the APA unless it addresses “legitimate reliance” on past policies and legitimate alternative policies. *Dep’t of Homeland Sec.*, 140 S. Ct. at 1910–15.

As discussed, the Title IX mandate would unleash a revolution in women’s sports and educational opportunity. For over 50 years, Title IX has protected women’s ability to have their own leagues and to afford them the opportunities and benefits of competition, scholarships, and achievements. Allowing—indeed, mandating—that males compete in those leagues based on gender identity turns Title IX on its head. The mandate has cascading negative impacts on women’s privacy and fairness in educational settings beyond sports as well, since Title IX applies to the entire educational enterprise, not just to athletics.

Yet the mandate spans a mere four pages of the Federal Register, and the Department spent the entirety of that text discussing *Bostock* instead of the mandate’s many negative and substantial impacts on

women. There is zero discussion of how two generations of women have relied on Title IX for the benefits it afforded them, and how this mandate would adversely affect those benefits. There is likewise no discussion of alternative approaches to the Department's goal of protecting fairness for persons who identify as a different gender than their sex. This lack of meaningful discussion about such important subjects is in one sense unsurprising, since the Department allowed for no public comment and wanted to bury its head in the sand about the practical consequences of its reimagining of Title IX. But the approach is illegal nonetheless, and it forms an independent basis for this Court to affirm the preliminary injunction and, by extension, to deny the Department's motion to dismiss.

## CONCLUSION AND REQUESTED RELIEF

A.F. and ACSI respectfully request that this Court affirm both the District Court's granting of the States' preliminary injunction motion and its denial of the Department's motion to dismiss.

IN THE UNITED STATES DISTRICT COURT  
FOR THE SOUTHERN DISTRICT OF WEST VIRGINIA  
CHARLESTON DIVISION

B.P.J, by her next friend and mother, HEATHER JACKSON

*Plaintiff,*

v.

WEST VIRGINIA STATE BOARD OF EDUCATION, HARRISON COUNTY BOARD OF EDUCATION, WEST VIRGINIA SECONDARY SCHOOL ACTIVITIES COMMISSION, W. CLAYTON BURCH in his official capacity as State Superintendent, DORA STUTLER in her official capacity as Harrison County Superintendent, and THE STATE OF WEST VIRGINIA

*Defendants,*

and

LAINEY ARMISTEAD

*Defendant-Intervenor.*

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF LAINEY ARMISTEAD**

I, Lainey Armistead, under penalty of perjury, declare as follows:

1. I am a twenty-two-year-old resident of Charleston, West Virginia, in Kanawha County, and have personal knowledge of the information below.

2. I am a junior and female athlete at West Virginia State University (WVSU) in Charleston, West Virginia, where I am a member of the women's soccer team. Soccer is my passion and life-defining pursuit.

***Athletics Background***

3. I come from a family of talented athletes. My dad was a multi-sport athlete in high school and an All-American soccer player in college. He later coached club soccer. My

mom was a high school and collegiate cheerleader. Two of my brothers went on to play soccer in college.

4. Soccer was like the air I breathed growing up. I first kicked a soccer ball at three years old—almost as soon as I could walk. I grew up playing pick-up soccer games with my brothers, being coached by my dad on technique, and cheering at soccer matches alongside my family.

5. I started playing on club soccer teams in my home state of Kentucky at age seven and continued competing on club teams through the end of my high school career.

6. I was excited to enjoy success on those club soccer teams. When I was just nine years old, my club soccer team won the indoor U.S. Youth Futsall National Championships—which is the largest and most prestigious indoor youth soccer competition in the country. It was an unforgettable experience.

7. I later went on to help my club soccer team win state championships during my freshman and sophomore years of high school. Those wins pushed me to try even harder.

8. Also during my sophomore year of high school, I had the honor of being selected from my club soccer team (Kentucky Fire) as one of only 20 girls in the nation to be invited to compete in a showcase soccer event in Las Vegas.

9. In addition to club soccer, I also competed on my school's middle school and high school soccer teams. One of my favorite memories from that time was helping my high school soccer team win the state championship during my freshman year of high school.

### ***Competing in Women's Collegiate Athletics***

10. It was my dream to play soccer in college. And I hoped my hard work would pay off with a college scholarship. I know, however, that athletic scholarships are limited and competitive.

11. After visiting approximately ten different colleges, I decided to visit West Virginia State University (WVSU), a public state university. I immediately knew this was where I wanted to attend college and I committed the same day.

12. WVSU offered me a soccer scholarship to compete on its women's soccer team. That scholarship helps pay for my education and brings me one step closer to my dream of being a lawyer someday.

13. Without a scholarship, I likely would have attended a college in my hometown and been saddled with school loans. My athletic scholarship opened the door for me to attend the school of my choice.

14. WVSU is an NCAA Division II soccer team and competes in the NCAA Mountain East Conference.

15. There are 11 players per team (22 players total) on the soccer field at any given time, though teams may have two or three times that many players total. Those 11 starting positions are highly coveted and competitive.

16. Team players are grouped into four general categories:

- a. the front, or attacking positions, which are called strikers;
- b. the midfielder positions;
- c. the defender positions;
- d. and the goalie.

17. I play starting left wingback on the soccer field, which is a defender position. But I “attack” a lot, which means I run up and down the field much of the game.

18. I also have the privilege of serving as team captain. This is a leadership position that is voted on by both players and coach, and has responsibilities that include organizing the team, determining what jerseys to wear, serving as liaison between the players and coaches, and also serving as liaison between the players and referee.

19. In 2020, I received the Stinger Award for “Female Teammate of the Year” in WVSU women’s soccer.

20. Due to the COVID-19 pandemic, I currently have three years of NCAA eligibility left.

21. My teammates and I train hard to win. We do running drills, weightlifting, and watch replay videos of our prior games to evaluate how we can improve.

22. But it is not always easy. I have made many sacrifices over the course of my athletic career to play the sport that I love. I have missed school dances and spring breaks; family events; and friends’ birthdays. I have given up my weekends and free time. I stay at school late for practice and get up early to train.

23. But I make these sacrifices because I want to be the best that I can be. I want to win—not just for myself, but also for my teammates. And it is that love of winning that helps me press through when the going gets tough.

24. I love my sport. It’s exhilarating to see all the training and hard work that we put in at practice pay off on the field.

25. Soccer is called the “beautiful sport”—and for good reason. It is the most played sport in the world. Like music, soccer transcends culture. You can play a pick-up game of soccer with anyone regardless of language or background.

26. But soccer is also beautiful because it takes incredible teamwork to achieve a win. Soccer is a 90-minute game. It is much more difficult for women to run nonstop for a full 90-minutes than it is for men. As a result, women’s soccer games are different than men’s. We have to be more cohesive. We pass the ball more, communicate more, and rely on our teammates more. But rather than a downside, I see teamwork as a thing of beauty. I love accomplishing things as a group. And when I step on the field with those ten other women, I know they have my back and I have theirs. We play hard for each other. As a result, my teammates have become some of my closest friends.

27. Soccer also taught me life skills like mental and physical toughness, perseverance, and good sportsmanship. It taught me that hard work and discipline pay off. It taught me the value of teamwork. It provided leadership opportunities that will benefit my future career. It opened new financial opportunities, such as benefitting from my image and likeness. It has given me lasting friendships with my teammates. And it has given me something to strive for. I would not be the person I am today without soccer.

### ***Safety Concerns in Soccer***

28. Soccer is a rough contact sport, and injuries are common among female athletes.

29. From my own observations, concussions, knee injuries, and ankle injuries are the most common injuries incurred by soccer players. In the first couple games of the WVSU fall 2021 soccer season alone, members of my team suffered all three of these injuries.

30. Playing a rough contact sport with other girls is one thing. But having played pick-up soccer games with my brothers and street soccer with men, I have realized that playing a rough contact sport with men is entirely different.

31. Males are generally stronger, fitter, faster, and have a bigger stature than women, which gives them advantages of strength, speed, and size in soccer. They compete at a faster pace. They kick the ball harder. They have physical frames that are generally larger.

32. Thankfully, I can enjoy a casual pick-up game of soccer with men because they take it easier on me. They do not go “all-in” because they know they could hurt me. But it would be a different story if a male was seriously competing and making full use of his strength, speed, and size in a soccer match against me. Based on my long experience playing competitive team soccer, I would be more worried that I could be injured by a male than a female competitor in a game in which players are trying their hardest to win.

### ***Fairness in Women’s Sports***

33. A couple years ago, I heard about female track athletes in Connecticut who lost to biological males competing in their races. I learned that these two males won 15 women’s state championship titles in girls’ high school track and field. I was appalled and heartbroken for those girls. It felt so unfair. But I was thankful that those athletes had the courage to stand up.

34. I also heard that a male who competed on the University of Montana men’s team track and cross-country team began competing in women’s cross-country and track events and displaced collegiate female athletes.

35. So when I heard that West Virginia’s legislature passed the Save Women’s Sports Act to protect the integrity of women’s sports, I enthusiastically supported it.

36. I never dreamed this would be an issue in West Virginia. And I never thought this issue could personally impact my competition till I learned a lawsuit had been filed against the new West Virginia law to protect women's sports.

37. Getting involved in this lawsuit was a weighty decision. I sought a lot of counsel and considered my options carefully before deciding to become involved in a case of this public importance and controversy. It's not always easy standing up for what you believe in.

38. And I know from experience in friendly competitions against men that facing a male in a soccer game changes the entire dynamics on the field and poses not just fairness but safety concerns, as well.

39. If forced to compete against a male athlete, I would have to face the hard decision of competing on an unfair playing field with heightened safety risks, or not competing at all.

40. A single male on my team could displace me or one of my teammates from a starting position—or a position on the team.

41. Even if the male athlete was on my team—arguably giving my team an advantage—I would treat that individual with respect and kindness, but it would still be unfair to displace a female athlete from her place on the field or from that position. And it also would not be fair to the female players on the opposing team.

42. Allowing males into women's athletics allows a person with a male body to take opportunities away from female athletes—whether that is a spot on the team, a starting position on the field, an athletic scholarship, the opportunity to benefit from her likeness, or recognition and awards—and is contrary to the entire purpose of women's sports.

43. Women's sports exist to give girls like me a chance to compete in sports on a level playing field.

44. Women have worked so hard to be taken seriously on the athletic level.

45. I fear that too many women feel pressured to remain silent about their beliefs.

46. I want other little girls in the future, or my own daughters, to not have to worry about competing against males. I also fear that girls in the future might consider not playing at all if they feel they cannot win against a physically superior male. Winning is the motivation for a lot of us who played sports for years.

47. I believe that protecting fairness in women's sports is a women's rights issue. This isn't just about fair play for me: it's about protecting fairness and safety for female athletes across West Virginia. It's about ensuring that future generations of female athletes are not discriminated against but have access to the same equal athletic opportunities that shaped my life.

48. Being an athlete in college has made me even more passionate about the sport that I play. I want fairness and equality in sports. And I want to ensure those standards are protected for other girls, too.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF CHELSEA MITCHELL**

I, Chelsea Mitchell, declare as follows:

1. I am a nineteen-year-old graduate of Canton High School in Canton, Connecticut, and a sophomore student athlete at the College of William and Mary in Williamsburg, Virginia.
2. As an elite female athlete, I had the deflating experience of competing against and losing to male athletes in the girls' category throughout all four years of my high school career. I personally lost four state championship titles, two All-New England awards, medals, points, placements, and publicity due to an unfair state athletic policy that permits males to compete in girls' sports in Connecticut.

3. I hope that by sharing my experience, no other female athlete will have to face the heartache and loss that I did.

### ***Athletic Background***

4. Sports are a big part of my family. My sisters and I each started playing organized sports in kindergarten and later became multi-sport athletes. My oldest sister was captain of her high school soccer and track teams and went on to run collegiate track. My younger sister plays high school soccer and runs track, and also played lacrosse and basketball for a time. And I played basketball until eighth grade. I was the leading scorer on my varsity soccer team and a four-year starter. And I am a short distance sprinter and long-jumper.

5. My dad dedicated 15 years to coaching our soccer and basketball teams. My mom was our number one cheerleader, driving us to and from games, and volunteering her time so that we could play the sports we loved.

6. I started running track in middle school. My older sister ran it, and I decided to give it a try. I loved it: the competitiveness, how it makes me feel, and the opportunity to win.

7. I'm quite proud of my high school athletic achievements, which include:

- High School All-American for Long Jump, 2020 – NSAF (top 6 nationally)
- Girls Outdoor Track Athlete of the Year, 2019 – Connecticut High School Coaches Association
- Bo Kolinsky Female Athlete of the Year, 2019 – Hartford Courant (soccer and track)
- New England Champion in 100m
- 3 State Open Championships – 55m, 100m, Long Jump
- 8 State Championships – 55m, 100m, 200m, 300m, Long Jump x3, 4x100 relay
- 20 Conference Championships
- Hold the Conference Meet Records in all my events – 55m, 300m, LJ, 100m, 200m, LJ
- MVP award for track every season of high school career.
- Most goals scored in school history for girls' soccer.
- Most championship titles in school history for any athlete, male or female.

- Being the only female in school history to win a State or New England Championship in track and field. Thirteen different male athletes have won titles.

8. I am proud of what I've accomplished. But it hasn't been easy.

9. I have made a ton of sacrifices to compete—giving up what many would consider the “normal” teenage life by watching what I eat, skipping the parties, and going to bed early. I spend several hours a day at the track and in the weight room. Track meets are all-day events that start early and end late. I usually train or compete six days a week, with Sunday often my only day off when we are in-season. I do all of this to strengthen my body and improve my technique in hopes of running just a few tenths of a second faster or jumping just a few inches farther.

10. I do not mind the early mornings and long, tiring days when I know the competition is fair. Because when the competition is fair, I know I have a decent shot at winning. But my high school experience was anything but fair.

### ***Males competing in Connecticut girls' track***

11. During my freshman year of high school, my mom informed me that a male would be competing in the girls' category.

12. Later, we learned that the Connecticut Interscholastic Athletic Conference (CIAC)—the athletic association that set the rules for school sports in Connecticut—had passed a policy allowing biological males who identify as female to compete in the girls' category.

13. From the Spring 2017 outdoor track season through the Winter 2020 indoor track season<sup>1</sup>—six track seasons—I competed against biological males in my track and field athletic events due to the CIAC policy.

---

<sup>1</sup> The Spring 2020 outdoor season was cancelled due to the global COVID-19 pandemic.

14. Over the course of my high school career, I competed head-to-head with male athletes 27 times. I never won a race in which both male athletes were running.

**2016-2017 Freshman Year**

15. I first competed against a male in girls' track and field as a fourteen-year-old freshman at the Spring 2017 State Open Championship.

16. On the way to this meet, I was instructed by my coach to respond "no comment" if asked about the issue of males competing in the female category.

17. In the 100m final at the 2017 outdoor State Open, I placed 7th overall. The top six receive a medal and qualify to advance to the New England Regional Championship: one of those top six spots was taken by male athlete Andraya Yearwood:

**Table 1: 2017 CIAC State Open Women's Outdoor Track 100m Results (June 5, 2017)<sup>2</sup>**

| Place | Grade | Sex | Name             | Time   | High School    |
|-------|-------|-----|------------------|--------|----------------|
| 1*    | 12    | F   | Caroline O'Neil  | 12.14s | Daniel Hand    |
| 2*    | 12    | F   | Kathryn Kelly    | 12.36s | Lauralton Hall |
| 3*    | 9     | M   | Andraya Yearwood | 12.41s | Cromwell       |
| 4*    | 11    | F   | Tia Marie Brown  | 12.44s | Windsor        |
| 5*    | 12    | F   | Kiara Smith      | 12.59s | Jonathan Law   |
| 6*    | 11    | F   | Kate Hall        | 12.62s | Stonington     |
| 7     | 9     | F   | Chelsea Mitchell | 12.69s | Canton         |
| 8     | 12    | F   | Tiandra Robinson | FS     | Weaver         |

\* Qualified for the New England Championship.

18. If not for Yearwood's participation in the girls' category, I would have medaled and had the honor of advancing to the prestigious regional championship as a freshman.

<sup>2</sup> AthleticNet, <https://www.athletic.net/TrackAndField/meet/306453/results/f/1/100m>, last visited June 2, 2020.

**2017-2018 Sophomore Year**

19. During my sophomore year, I learned that Andraya Yearwood's school was reclassified to the Class S division for indoor track events—which was the same class as my school.

20. This news was upsetting for me because I would now be racing against a male competitor at both the Class S championship and the State Open championship.

21. At the February 10, 2018, indoor Class S Championship in the 300m, I was knocked out of advancing to the State Open by just one spot—a spot was taken by Andraya.

22. As a competitive person, I often check Athletic.net, a website that lists high school track rankings. One day, I noticed a new girl, named Terry Miller, at the top of the charts. Terry was running times better than I ever hoped to run. But my coach told me later that it must be some mistake—perhaps Terry was entered in the wrong race. Terry had competed as a boy for the previous three seasons.

23. On April 27, 2018, at the first invitational race of the Spring 2018 outdoor season, I was seeded in the 100m in a lane beside not just one, but two male athletes: Terry Miller and Andraya Yearwood.

24. I distinctly remember seeing Terry look over to Andraya and say: “You and me, one and two.” At fifteen years old, I felt extremely intimidated to run against bigger, faster, and stronger male competitors.

25. But Terry was right. I should have won that 100m race; but instead, Terry and Andraya took first and second place, while I placed third.

26. Similarly, at the Spring 2018 outdoor State Open Championship, Terry won the women's 100m event by a wide margin, while Andraya finished second.

27. But for CIAC's policy, I would have won second place statewide:

**Table 2: 2018 CIAC State Open Championship Women's Outdoor Track 100m Results (June 4, 2018)<sup>3</sup>**

| Place | Grade | Sex | Name             | Time   | High School       |
|-------|-------|-----|------------------|--------|-------------------|
| 1*    | 10    | M   | Terry Miller     | 11.72s | Bulkeley          |
| 2*    | 10    | M   | Andraya Yearwood | 12.29s | Cromwell          |
| 3*    | 11    | F   | Bridget Lalonde  | 12.36s | RHAM              |
| 4*    | 10    | F   | Chelsea Mitchell | 12.39s | Canton            |
| 5*    | 11    | F   | Maya Mocarski    | 12.47s | Fairfield Ludlowe |
| 6*    | 10    | F   | Selina Soule     | 12.67s | Glastonbury       |
| 7     | 12    | F   | Tia Marie Brown  | 12.71s | Windsor           |
| 8     | 11    | F   | Ayesha Nelson    | 12.80s | Hillhouse         |

\* Qualified for the New England Championship.

28. Bridget Lalonde beat me by just three-hundredths of a second, but I was so relieved that she did. Emotionally, it was less of a loss to be denied runner-up status than to be denied a first place State Open Championship—a feat almost unheard of for a high school sophomore.

29. At the 2018 outdoor New England Regional Championship, I placed seventh in the 100m. Only the top six medal and receive the All New England award—one of those top six spots was taken by Terry.

30. Had I earned the title of All New England, I would have made Canton High School history as the first Canton female athlete to win this prestigious award.

### **2018-2019 Junior Year**

31. In the fall of my junior year, I learned that male athlete Terry Miller transferred to Bloomfield, another Class S school.

32. I was devastated, fearing that with two males competing in my division, my chances of ever winning a state championship in sprints were now over.

---

<sup>3</sup> AthleticNet, <https://www.athletic.net/TrackAndField/meet/334210/results/f/1/100m>, last visited June 2, 2020.

33. I trained harder than ever, spending countless hours to shave mere fractions of seconds off of my times. I never missed a practice, squeezed in extra workouts where I could, and saw my race times consistently drop.

34. But it was not enough. And my fears of losing championship after championship were realized in the Winter and Spring 2019 seasons.

35. At the February 7, 2019, indoor Class S State Championship, Terry finished first in the 55m. I placed second. But for the CIAC's policy, I would have been named the Class S State Champion in the 55m.

36. The February 16, 2019, indoor State Open Championship saw similar results and a similar impact. Terry and Andraya finished first and second respectively in both the preliminary and final Women's 55m races, each time defeating the fastest girl by a wide margin. I placed third in the final.

37. But for CIAC's policy, I would have won the 2019 State Open Championship in the 55m dash:

**Table 3: 2019 CIAC State Open Championship Women's Indoor Track 55m Preliminary Results (February 16, 2019)<sup>4</sup>**

| Place | Grade | Sex | Name             | Time  | High School       |
|-------|-------|-----|------------------|-------|-------------------|
| 1*    | 11    | M   | Terry Miller     | 7.00s | Bloomfield        |
| 2*    | 11    | M   | Andraya Yearwood | 7.07s | Cromwell          |
| 3*    | 12    | F   | Cori Richardson  | 7.24s | Windsor           |
| 4*    | 11    | F   | Chelsea Mitchell | 7.27s | Canton            |
| 5*    | 12    | F   | Kate Shaffer     | 7.27s | Conard            |
| 6*    | 12    | F   | Ayesha Nelson    | 7.29s | Hillhouse         |
| 7*    | 12    | F   | Maya Mocarski    | 7.34s | Fairfield Ludlowe |
| 8     | 11    | F   | Selina Soule     | 7.37s | Glastonbury       |
| 9     | 10    | F   | Kisha Francois   | 7.41s | East Haven        |

\* Qualified for the women's 55m final.

<sup>4</sup> AthleticNet, <https://www.athletic.net/TrackAndField/meet/352707/results/f/1/55m>, last visited June 2, 2020.

**Table 4: 2019 CIAC State Open Championship Women's Indoor Track 55m Final Results (February 16, 2019)<sup>5</sup>**

| Place | Grade | Sex | Name             | Time  | High School       |
|-------|-------|-----|------------------|-------|-------------------|
| 1*    | 11    | M   | Terry Miller     | 6.95s | Bloomfield        |
| 2*    | 11    | M   | Andraya Yearwood | 7.01s | Cromwell          |
| 3*    | 11    | F   | Chelsea Mitchell | 7.23s | Canton            |
| 4*    | 12    | F   | Kate Shaffer     | 7.24s | Conard            |
| 5*    | 12    | F   | Ayesha Nelson    | 7.26s | Hillhouse         |
| 6*    | 12    | F   | Maya Mocarski    | 7.33s | Fairfield Ludlowe |
| 7     | 12    | F   | Cori Richardson  | 7.39s | Windsor           |

\* Qualified for the New England Championship.

38. Instead, I was not named State Open Champion in the 55m, I received a bronze medal instead of a gold medal, and I did not make Canton High School history as the first ever Canton female athlete to be named a State Open Champion.

39. However, after the 55m race, I returned to the finals of the long jump, which had no males competing. While listening to them announce Terry as the winner and new meet record holder in the 55m, I won the long jump event to solidify my place in the Canton record books as the first Canton indoor track athlete—male or female—to be named a State Open Champion.

40. State Champions are recognized as All-State Athletes, an award listed on college applications, scholarship applications, and college recruiting profiles. State Champions are invited to the All-State Banquet, and get their name celebrated on a banner in their high school gym. I did not receive any of these awards for the 55m. But I was able to receive these awards for my long jump championship.

41. After the State Open Championship, I was repeatedly referred to in the press as the “third-place competitor, who is not transgender.” I was the fastest biological girl in the 55m race at the State Open Championship, but the press did not mention my name—I felt invisible.

---

<sup>5</sup> *Id.*

42. At the March 2, 2019, indoor New England Regional Championship, Terry took first and Andraya took third place in the 55m dash. I missed medaling and being named All New England Champion by just two spots—two spots that were taken by male competitors.

43. Following Terry Miller’s sweep of the CIAC’s Indoor Class S, State Open, and New England titles in the 55m dash and 300m, Terry was named “All-Courant girls indoor track and field athlete of the year” by the Hartford Courant newspaper. This felt like an injustice to my fellow female athletes.

44. In the Spring 2019 outdoor season, I competed against both Terry and Andraya in the Class S Championship. At this event, I ran the fastest biological female times in the 100m and 200m across all state class meets.

45. But because of the CIAC’s policy, being the fastest biological girl just was not good enough to experience the thrill of victory. Instead, at the 2019 Class S Championship, Terry placed first in the 100m and 200m, while I placed second in both events. I won the long jump and received a state title. But because of the CIAC’s policy, I took home only one state title instead of three.

46. The trend continued at the 2019 outdoor State Open Championship as Terry easily won the women’s 200m race. But for CIAC’s policy, Cori Richardson would have won the state championship, Alanna Smith would have finished runner-up, and Olivia D’Haiti would have advanced to the New England Championship:

**Table 5: 2019 CIAC State Open Championship Women’s Outdoor Track 200m Final Results (June 3, 2019)<sup>6</sup>**

| Place | Grade | Sex | Name | Time | High School |
|-------|-------|-----|------|------|-------------|
|-------|-------|-----|------|------|-------------|

<sup>6</sup> AthleticNet, <https://www.athletic.net/TrackAndField/MeetResults.aspx?Meet=364088&show=all>, last visited June 2, 2020.

|    |    |   |                  |        |                 |
|----|----|---|------------------|--------|-----------------|
| 1* | 11 | M | Terry Miller     | 24.33s | Bloomfield      |
| 2* | 12 | F | Cori Richardson  | 24.75s | Windsor         |
| 3* | 9  | F | Alanna Smith     | 25.01s | Danbury         |
| 4* | 11 | F | Chelsea Mitchell | 25.24s | Canton          |
| 5* | 12 | F | Nichele Smith    | 25.38s | East Hartford   |
| 6* | 12 | F | Bridget Lalonde  | 25.55s | RHAM            |
| 7  | 12 | F | Olivia D'Haiti   | 25.63s | Kolbe-Cathedral |

\* Qualified for the New England Championship.

47. But I did receive one opportunity to compete on a more level playing field. At the Spring 2019 State Open Championship in the 100m, Terry, the top-seed in the race, false-started and was disqualified. This opened the door for me: I was able to relax, focus on my race, and win. I set a personal record of 11.67 seconds, made Canton High School history as the first sprinter to be a state open champion in any sprint event, medaled, received significant media publicity, and advanced to the New England Regional Championships.

48. I went on to win the New England Regional Championships in the 100m dash and was named All New-England. Here, too, I made Canton High School history as the first female to win a New England Championship.

49. Thereafter, I was awarded Track Athlete of the Year by the Connecticut High School Coaches Association, and the Hartford Courant named me 2019 All-Courant Girls Outdoor Track and Field Athlete of the Year and the Bo Kolinsky Female Athlete of the Year (across all sports).

50. My new personal record, State Open Champion and All New-England awards put me in a much better recruiting position for college scholarships—all because a false start that prevented a male from competing against me in the women's division leveled the playing field.

### ***2019-2020 Senior Year***

51. A similar scenario played out in the Winter 2020 season. At the indoor Class S Championship 55m race, Andraya Yearwood—the top seed in the race and the individual ranked

number one in the state for the women's 55m dash—false-started and was disqualified. That false start opened the door for me to not only win the CIAC Class S Championship in the 55m dash, but also to advance to the 2020 Connecticut State Open Championship in the 55m event and win.

52. To my disappointment, the 2020 Spring outdoor season—the final track season of my high school career — was cancelled in light of the global COVID-19 pandemic.

53. It feels defeating to know that records at my high school, CIAC, AthleticNet, MySportsResults, CT.Milesplit.com, and others do not reflect the four state titles and two All New England awards I should have earned. It is upsetting to know that the meet records of many great female athletes before me have also been wiped from the books.

54. Competing against males makes me feel anxious and stressed. And stress has a negative impact on my athletic performance.

55. I try to stay positive, to take support from family and friends, but it is hard when I know that I must compete against those who have a biological advantage because they were born male.

56. I hope that future female athletes will not have to endure the anxiety, stress, and performance losses that I have while competing under a policy that allows males to compete in the female category.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

---

Chelsea Mitchell

and

LAINEY ARMISTEAD,

*Defendant-Intervenor.*

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF CHRISTINA MITCHELL**

I, Christina L. Mitchell, under penalty of perjury, declare as follows:

1. I am a forty-eight-year-old resident of Canton, Connecticut, in Hartford County, and have personal knowledge of the information below.

2. I am the mother of three female athletes. My daughters are now ages twenty-three, nineteen, and fifteen and have competed in soccer, basketball, and track. Our family life has been centered around sports since the girls were just little, spending most nights and nearly every weekend at the soccer field, in the gym, or at the track.

***Family Athletics Background***

3. I ran track and played basketball in high school. My husband played many sports and was the star of his high school basketball team. We have a competitive spirit that we have

passed on to our girls. Whether it's board games, March Madness brackets, or a pickup game of soccer in the yard, our family enjoys a good competition.

4. My husband volunteered his time as a youth soccer and basketball coach for the town of Canton for fifteen years. He would race home from his office job to try and make it to the field or gym in time for practice. Some seasons he coached two of our daughters' teams, which meant practice four nights a week and four games each weekend. It was exhausting but he loved every minute of it.

5. I volunteered on the Board for the Canton Youth Soccer Association for eight years. As registrar, I had to enforce strict age categories for the teams. Kids were allowed to "play up" on an older team but were never allowed to "play down" on a team for younger kids. Soccer teams were also separated by sex beginning in first grade. Boys' teams were designated as co-ed so that girls who wanted to sign up for the boys' team could "play up". Girls' teams were restricted to females in the registration system.

6. When my oldest daughter reached high school, I turned my volunteer efforts to the Canton Athletic Booster Club. I worked to get a concession stand built and stadium lighting installed at the high school track and field. In 2017, I was presented with the Dubuc Service to Canton Award in recognition for my years of volunteer service to the school and community.

7. All three of our daughters have excelled at sports. Our oldest daughter, Emily, was a varsity soccer and track athlete in high school. She was captain of both teams in her senior year and went on to compete on the women's track team in college.

8. Our youngest daughter, Kennedy, is a sophomore in high school and competes in soccer and track as well. She plays outside defensive back in soccer and her team made it to the

state championship this year. She is a long jumper and sprinter in track. She hopes to continue with one of these sports in college.

9. Our middle daughter, Chelsea, has proven herself as an exceptional athlete. Like her sisters, she had success in both soccer and track in high school. As a little girl on the soccer field, you could see her natural ability to run – she could come from 20 yards behind and beat anyone to the ball. When she got to high school, she added a heavy dose of hard work to that natural gift and made the most of it on the track.

***2017 Outdoor Track Season – Freshman year***

10. In April of 2017, the outdoor season of track and field in Connecticut was just getting started and Chelsea was ranked among the top sprinters in the state. She was coming off the indoor season where she set school records in the 55m and 300m at her very first meet.

11. There was one other freshman posting times in the top ten, Andraya Yearwood. I soon learned from an article in the Hartford Courant that Yearwood was a male identifying as female and running for Cromwell. I was confused by the piece, which seemed to celebrate this, and found it hard to believe that the schools, coaches, and state officials would allow it to continue. I saw it as a clear violation of women's rights under Title IX.

12. Chelsea worked hard that season and placed 2<sup>nd</sup> at the Class S state championship in all three of her events - the 100m, 200m, and 4x100 relay. The top five in each event advance to the State Open Championship to compete against the top twenty-five athletes in the state. Making it to the State Open is a huge accomplishment and Chelsea had qualified in all three events as a freshman. We were very proud and excited for her.

13. I knew that one of the other twenty-five competitors at the State Open would be Andraya Yearwood. The CIAC had allowed Yearwood to compete at the Class M state

championships and take the girls' title in the 100m and 200m races. One of the girls who placed second, Kate Hall, was interviewed following the race – "I can't really say what I want to say". The silencing of the girls had begun.

14. I had shielded Chelsea from much of the news up to this point, but the night before the race we felt we needed to prepare her for what she would face the next day. I told her there would be a boy who identified as a girl in her race and that she had to try to focus on herself and block out the rest. We knew that this would be a blow to her mental game but didn't want her to be surprised by it at the start line.

15. Chelsea's first race against a biological male was on a really big stage. The State Open is held at New Britain stadium, one of the biggest outdoor tracks in Connecticut. It is always packed with spectators and many college coaches attend to see potential recruits in action.

16. For me, it was my first time watching this unfair policy play out in person. As someone who has now watched my daughter race against males more than twenty times, I can attest to how difficult it has been every single time. The girls are forced into a race that they know is rigged against them. They are told to be quiet and be a good sport. They watch as officials casually ignore the foundational principle of sport – fair play. They see the media there, waiting to celebrate the travesty and daring the girls to speak against it. The message to these girls was very clear – nobody cares about your rights. As a woman it was infuriating and as a mom it was heartbreaking. I can only imagine what it felt like to be one of the girls in the race.

17. The 2017 Outdoor State Open was Chelsea's first tangible loss to a biological male. She took 7<sup>th</sup> place in the finals of the 100m. She missed advancing to the New England Championship by one spot. Yearwood had placed 3<sup>rd</sup>.

18. In a stroke of luck, one of the six automatic qualifiers to New England, Caroline O’Neil, had to decline her spot. We got the call later that night that as the 7<sup>th</sup> place finisher, Chelsea could go and compete. We were so grateful.

19. A few days later at the New England Championships, I watched as Yearwood’s 2<sup>nd</sup> place finish in the 100m again took something tangible from female athletes. Madison Post from Maine didn’t make the finals. Katya Levasseur from New Hampshire missed the top six and lost out on the All-New England designation. Kyla Hill from Massachusetts took home a 3<sup>rd</sup> place medal instead of silver. The ripple effect of Connecticut’s policy had spread to our neighboring states.

***2018 Indoor Track Season – Sophomore Year***

20. I hoped that common sense would prevail, and this would work itself out before the next season. It didn’t. Yearwood took home the 2018 Indoor Class S State Championship title in the 55m and placed 2<sup>nd</sup> in the 300m. Chelsea recorded another lost opportunity due to the policy as she missed advancing to the State Open in the 300m by one spot. Patricia Jurkowski should have taken home the 55m title and other girls lost opportunities to advance to finals or score points for their team. With every race, the list of female sprinters impacted by the policy grew longer. I knew I couldn’t remain silent about it any longer.

21. Following the 2018 Indoor State Championships, I began to advocate for a change in policy. I first spoke to the Assistant Superintendent of Canton Schools, Dr. Jordan Grossman. I asked if he thought the Board of Education could help, but he advised against taking the issue to them. Instead, he gave me the name of the CIAC Executive Director so I could follow up with them directly.

22. I went to work on a letter to the CIAC asking for a solution to protect the rights of the female athletes in our state. I included the Canton principal, athletic director, coach, and assistant superintendent on the email. The CIAC replied that they were unwilling to consider changing the policy and listed various reasons. I addressed each reason with my own points – I was thorough and respectful – but I received no reply.

***2018 Outdoor Track Season – Sophomore Year***

23. The night before the first big meet of the outdoor season, we realized that a second male was competing in girls' sprint events. It was hard to believe at first, I remember thinking that surely this wasn't really happening. Terry Miller had competed for three seasons on the boys' team. Looking at the race results online, it was clear that Miller was an average runner that hadn't even qualified to compete at the boys' state championships just a few weeks earlier. After switching to the girls' team, Miller was suddenly ranked first in the state. I reached out to Chelsea's coach immediately. It seemed it was true; this was really happening.

24. The two male athletes took first and second in the 100m race the next day – Chelsea finished 3<sup>rd</sup>. With two males competing, it was clear that the number of lost opportunities for Chelsea and female sprinters across the state would now be double.

25. I again wrote to the Canton athletic director and principal to let them know that there were now two male athletes competing in girls' track. I asked them to urge the CIAC to change the policy before more harm was done but nothing changed.

26. Miller swept the sprint events at the Class M championship, taking three state titles. Yearwood was close behind. Girls were sidelined, missing finals and advancement to the Open. Anyone who tried to speak out was quickly silenced. Chelsea was thankfully in Class S

and took home three state titles of her own. But she would again head to the State Open to compete against males.

27. The State Open was a circus. Miller and Yearwood took 1<sup>st</sup> and 2<sup>nd</sup> in the 100m. The media was out in full force, waiting to ask the first female finisher how she felt about taking 3<sup>rd</sup> place. We were glad Chelsea took 4<sup>th</sup> and didn't have to deal with the emotions of being the one to lose a state title and her banner in the gym. Bridget LaLonde was the unlucky girl this time. Other girls lost points for their team, medals, and opportunities to advance to the New England Championship. The list of females impacted was very long at this point.

28. There was more of the same at the New England Championship. The top six athletes from Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, and Connecticut were there to compete for the title. It was a sunny day at a beautiful track and field facility at the University of New Hampshire, an incredible experience. But a cloud hung over the event as the female athletes were again denied a fair race.

29. I watched as Miller swept the 100m and 200m races at the New England championship. Chloe Alfieri, a senior from Massachusetts, took second place in both events. Miller was interviewed after each win, as is customary for the champion. Chloe missed out on those titles and that recognition. It was awful to watch.

30. Chelsea took 7<sup>th</sup> place in the 100m. The top six are given the All-New England designation, so it was another tangible loss that she directly felt. Athletes set goals for themselves—they don't expect to achieve the top spot right out of the gate. It is a progression. Being named All-New England was the goal she had set for the day and she hadn't reached it because they allowed a male to compete in her race.

31. Following the New England Championship, I called my state senator, Kevin Witkos. He urged me to seek help from the school administration, as he did not agree with the CIAC that Connecticut law required this policy. He felt that if asked by member schools, CIAC could change the policy and restore fairness for the female athletes.

32. I immediately followed up with an email to Canton school officials including Chelsea's coach, the athletic director, the principal, the assistant superintendent, and the superintendent. I asked them to contact the CIAC and urge a change in policy. Nobody responded to my email.

33. At the end of June, Senator Witkos reached out to me and said that he would work with the Connecticut Speaker of the House to draft a letter to the superintendents of all schools, but not until after the November elections, five months away. That letter never happened.

34. In July, I scheduled an in-person meeting with the principal, Drew DiPippo. I asked what the process was to formally request a change in CIAC policy. He said he would look into it and let me know. He noted that there would be a new CIAC Executive Director starting in August and that perhaps the policy would be revisited. I never heard back from him on the process to request a change.

35. During the fall, we learned that Terry Miller had transferred to a Class S school. Chelsea cried as I drove her home from soccer that night. She knew that meant she would now face males not just at the State Open, but at the Class S championship as well. In her mind, it meant she would never win another state championship race.

### ***2019 Indoor Track Season – Junior Year***

36. A few weeks before the state championships arrived, I drafted another letter to CIAC Executive Director, Glenn Lungarini, to again ask for fairness for female athletes and a

change in policy. The CIAC responded that they would not consider my request for a rule change because I was just a parent. I soon learned there was a new “gender committee” commissioned by the CIAC that would make a recommendation in the summer. It was an endless game of shifting responsibility and delaying any meaningful discussion.

37. As the championships drew near, I dreaded what was to come. I had watched many other girls lose the state title they deserved. This time it was Chelsea’s turn. As a junior, she was stronger, more experienced, and her times had improved significantly. She was the fastest female in the 55m at both the Class S championship and the State Open. But Miller went home with both of those titles. Jillian Mars was the fastest female in the 300m – she too was robbed of her titles. And, of course, more girls lost the chance to advance to finals, or the Open, or the New England Championship. Female athletes lost out on podium spots and medals and points for their team. Chelsea lost out on another All-New England designation after finishing 8<sup>th</sup> at the championship in Boston.

38. The list of girls who had been directly harmed was pages long by now, but the CIAC did not care. They showed so little regard for the rights of the female track athletes in our state it was staggering. The coaches and administrators remained silent, no doubt fearful for their jobs. But there was one girl who was not afraid to speak up, Selina Soule. We watched her bravely tell her story on national television one night and knowing that we weren’t alone in our fight made all the difference.

39. I asked my principal to schedule time for me to meet with CIAC director, Glenn Lungarini. As we sat in the principal’s office at Canton High School and I shared the list of the girls who had been directly harmed by the policy, it became clear that they had no intention of changing anything. I expressed my concerns that the CIAC policy was violating the rights of my

daughter and the other female athletes under Title IX. Mr. Lungarini's response was that my daughter had only the right to participate, not to win.

40. The CIAC director was not interested in alternative solutions or fairness for females. He did not seem at all bothered that the CIAC's unwillingness to address the issue had placed all of these kids directly in the center of a highly controversial international political debate. He tossed about slogans like "transwomen are women" and his arguments lacked any logical consistency or regard for the rights of females. I left feeling angry but resolved to advocate for Chelsea and all of the girls being harmed.

41. Following that meeting, I asked to meet with our school's Title IX coordinator, Lori Devito. I called the State of Connecticut's Title IX Coordinator, Dr. Adrian Wood, to discuss my options for filing a Title IX complaint. I spoke with an attorney, Robin Cecere, at the Connecticut Department of Education. I called the Office of Civil Rights for the U.S. Department of Education in Boston. Multiple times I was told by these government officials that girls have the right to participate, not to win. I began to believe it must be part of the talking points being circulated on this issue or in some presentation somewhere. It certainly didn't stem from any regulation or case law on Title IX that I had found.

42. I contacted the Canton Board of Education and the topic was added to the agenda for their next meeting. I was given three minutes to speak about something that had been impacting us for two years. I followed up with more emails to the Board of Education but would seldom get a reply. The one-way dialogue was not an effective means of discussion.

43. I continued to send research papers and information to Glenn Lungarini at the CIAC. He abruptly notified me that he would no longer receive my emails because I was just a parent. Everything would have to come from a member school. I went back to the Board of

Education and asked them to contact the CIAC to request a public forum be held so that parents could bring their concerns forward. Canton Superintendent, Kevin Case, assured me he would ask for one, but it never happened.

44. I emailed my state representative, Leslee Hill, and my state senator, Kevin Witkos. I contacted two female coaches from the Connecticut High School Coaches Association (CHSCA) to ask for their help requesting a rule change. In all of these cases, I explained the devastating impact this was having on female athletes in our state. And yet, at the end of the day, not a single person would help us get the policy changed.

***2019 Outdoor Track Season – Junior Year***

45. The Outdoor season added more names to the list of girls impacted by the policy. It was Chelsea's fifth season competing against males. My efforts to convince school and state officials to fix the policy had failed. I felt sure that nobody was going to take steps to change things unless their hand was forced.

46. The state championships should have been an exciting day, but I dreaded watching the injustice play out again. I understood how demoralizing and disrespectful it was to these girls and felt sickened by the whole thing. Chelsea lost the Class S championship in the 100m and 200m to Miller— her tally was now at four state titles lost to biological males. She headed to the State Open expecting more of the same.

47. It was her third year in a row competing against males in the 100m at the State Open. None of us were looking forward to watching males break the female records, take home the title, and give their post-race interviews. This year would be different though.

48. In what I often describe as a gift from above, there was a false-start in the 100m by Miller. Chelsea saw the playing field leveled a bit, and she was going to make the most of it.

Her win in the 100m that day was extraordinary for so many reasons and I will be forever grateful she had that moment. What unfolded at that stadium was emotional not just for us, but many in the crowd. We had so many strangers come up and hug her and tell us how happy they were for her. She ran a time that is still her personal best, even three years later.

49. Other awards and opportunities flowed from her success that day, and I often think of how sad it would have been if that false start hadn't happened and she had never had those experiences. It shouldn't need to be said, but girls shouldn't have to hope for a false start to get their chance at fair competition.

50. I continued to pursue opportunities to advocate for the girls. I had a meeting with Connecticut Deputy Attorney General Peggy Chapple and three other members of the AG's office. I met with Governor Lamont's General Counsel, Bob Clark. I spoke with several state lawmakers and asked them to pass legislation. I wrote letters to my U.S. Representative, Jahana Hayes, and my U.S. Senator, Richard Blumenthal. And while some were sympathetic to our position, they were unwilling to do anything to help.

51. I also looked for support from well-known feminist organizations such as Women's Sports Foundation, National Women's Law Center, and National Organization of Women. It was just unbelievable to learn that these organizations did not support our advocacy for fairness in women's sports. They issued statements to publicly say so. They completely ignored the impact it was having on our female athletes and seemed shockingly uneducated about the harm that will flow from eliminating sex-based rights in law. Thankfully, many other women's organizations are taking their place and stand with us in this fight.

**2020 Indoor Track Season – Senior Year**

52. After years of asking school, state, and federal officials for help, we did what we felt was our last resort. Two days before what would end up being Chelsea's final state championships, we filed a federal lawsuit. Chelsea was taking a public stand for herself and other female athletes. We hoped that this might finally make a difference and that what she went through wouldn't have to happen to anyone else. It took a great deal of courage, and I was very proud of her.

53. Since then, many more people are aware of her story. We have submitted testimony on both state and federal legislation. Several states have successfully passed laws to protect female sports and many more are now debating the issue. She has bravely given interviews and told her story in national publications. There was a time when she was afraid to speak out, and I was afraid for her future if she did. But we are no longer afraid.

54. We will continue to fight for policy and laws to be based on facts about science and biology, not ideology. We will exercise our right to speak out on issues that affect us without fear. We hope that in the end, the sex-based rights of females will be acknowledged and respected and fairness will be restored in our sports.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

and

LAINY ARMISTEAD,

*Defendant-Intervenor.*

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF ALANNA SMITH**

I, Alanna Smith, declare as follows:

1. I am an eighteen-year-old senior at Danbury High School in Danbury, Connecticut.
2. Though I am an elite female track athlete, I have personally experienced the devastating impact of competing against—and losing to—male athletes in my sport.
3. Though I only competed against these athletes during my freshman year of high school, they still impacted my placements, public recognition, medals, records, and how I physically and mentally prepared for competition.

### ***Athletic Background***

4. I was born into a family of athletes. My dad is a Major League Baseball Hall of Fame relief pitcher. My mom ran track in high school and still runs recreationally. One maternal uncle played professional football. Another played professional baseball. My twin brother is a three-sport athlete.

5. Sports was a big part of my world from a very young age, as I attended my dad's MLB games and events and ran with my mom. Having a twin brother who is naturally athletic helped instill a competitive drive in me, because as a little girl I loved to beat him in foot races at every opportunity.

6. The sports legacy that surrounds me was not something I consciously thought about—it just became a part of who I am. And without thinking about it too seriously, I knew I had the potential to excel athletically.

7. It wasn't until I started running with mom and developing endurance and strength that I considered competitively running track. So, in middle school, mom enrolled me in the local middle school track program. Between 2015 and 2018, I tried shot put, the long jump, the 55-meter dash, the 100-meter, 200-meter, 400-meter, and 800-meter races.

8. As I tried different track and field competitions, I realized that I enjoyed and excelled at running shorter distances. That's when I knew I wanted to concentrate on the 100-meter, 200-meter, and 400-meter distances. I wanted to run and get it over with!

9. During middle school, I became a three-peat 100-meter Connecticut State Champion. In eighth grade, I was also the 400-meter state champion.

10. My freshman year of high school I was a varsity cheerleader in the fall and winter and made it to the 2019 Connecticut High School Coaches Association All-State cheerleading team.

11. After cheerleading finished, I started outdoor track in the spring of 2019. I was nervous. The first few practices were hard. I felt that my teammates had high expectations based on my middle school track performance. And it didn't help that the first few track meets were outside in cold or rainy weather, courtesy of New England.

12. But I won. And it felt amazing. I had proven to myself, the coaches, and my teammates that I could be a contributor to a winning season.

13. As my freshman season played out, I set personal, conference, state and regional facility records; improved my personal strength and technique; and accomplished personal goals. I contributed to the Danbury High School sweeping the 2019 outdoor FCIAC, Class LL, State Open, and New England Regional Championship competitions, and received numerous honors such as The Ruden Report Player of the Week, The Ruden Report Player of the Year, the 2019 All-FCIAC First Team in the 100-meter, 200-meter, 400-meter, 2019 CHSCA All-State Girls' Outdoor Track, and was a recognizable component of the 2019 CHSCA Connecticut Team of the Year award.

14. Excelling on the track and setting personal records gives me a sense of personal achievement and confidence that carries over into all parts of my life. I love training, I love competing. Competing against girls like myself who work hard is rewarding. I compete to be the best, to be the fastest, to be a champion.

### ***Competition Against Males***

15. In spite of my focused, diligent practice and training, my success on the track has been limited by biological males competing in the girl's high school track in Connecticut.

16. I first competed against a male at the New York Relays in April 2019. My team was invited to attend, along with teams from approximately seventeen other states. I knew going in that there would be a male athlete named Terry Miller from another Connecticut school in my race, and I was upset. I knew I wouldn't win, and I knew we girls were competing for second place and beyond. As expected, Terry won the 100-meter dash. I placed fourth. Had Terry not competed in that race I would have been recognized as third place.

17. I learned later that Terry had competed for three seasons in Connecticut boys' high school track before switching to girls' track.

18. Later that season, I found out I would be racing against Terry Miller and a second male athlete, Andraya Yearwood, in the 100-meter dash at the 2019 Connecticut State Open that.

19. After learning this news, I thought "I don't stand a chance to win." I felt defeated before I even got set in my blocks. Terry was in the lane next to me in the 100-meter finals, and I assumed going in that Terry would win. Terry was disqualified from the race due to a false start. I felt badly for Terry as an athlete, but I could tell the rest of us girls were a bit relieved that the race would now be a little more fair.

20. Also at the 2019 Connecticut State Open, I raced Terry Miller in the women's 200-meter dash. Terry placed first. Because of a male in my race, I was pushed from second place to third place.

21. Thus, at the 2019 State Open, I had one fair race: the 400-meter dash. I won that event.

22. From the State Open Championship, I advanced to the New England Regional Championship meet, which is quite an accomplishment for any athlete, but especially a freshman.

23. I won the 400-meter title at the New England Regional Championships. It was exhilarating, not only because I won, but because my race was free of male athletes. It was a level playing field.

24. The 200-meter dash was a different story. I would have also been runner-up in the 200-meter and received a silver medal and earned my team more overall points, but Terry Miller placed first and pushed me down in the rankings to third. Third place is nothing to be ashamed of if it is won fair-and-square, but my race was anything but fair.

25. My story is not unique. Girls across Connecticut have experienced similar displacement, loss of recognition, and even championship title losses solely because my state allowed two biological males to compete against biological females. Between 2017-2020, these two male competitors won 15 women's state championship titles and set 17 new meet records in track and field. These statistics are in the back of my mind no matter how hard I train and how well I perform

26. Even though the males have graduated now and are no longer competing against us girls in Connecticut, we still feel the effects of their participation. For example, in the 2022 Connecticut indoor track and field season—long after Terry Miller and Andraya Yearwood graduated—I ran a 6:96 time in the 55m dash. This would have set a new Connecticut girls' state record. But back in 2019, Terry Miller set a record of 6.95 in the 55m dash, eclipsing my best time. If not for Terry competing in the girls' category three years ago, I would have been

recognized for my accomplishment—setting a new record for female athletes in my state.

***Fairness in Women's Sports***

27. It has taken me years to develop the personal confidence and sense of belonging I now feel on my track team. The addition of males to girls' sports fills me with a sense of defeat before I even set up in the blocks. I deserve the opportunity to be confident, to be running against girls who have the same biological makeup that I do.

28. The addition of males in girls' sports is frustrating and disappointing to me. So often I go to the blocks and know that I am the fastest girl on the line. But I also know that my best effort will not be enough when I'm faced with a competitor who is bigger, faster, and stronger than me simply because he was born male.

29. I want to make sure that female athletes of today and tomorrow do not have to face the same sense of defeat, disappointment, and lack of support that I have felt. So many girls across my state believe the situation is unfair but are afraid to stand up and speak out for fear of retaliation from coaches, schools, the media, and strangers.

30. I am proud of all female athletes who stay strong and do their very best when rules and laws put unfair challenges in their way. I am proud to be a voice for female athletes who are surrounded by unfairness in their sport.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF SELINA SOULE**

I, Selina Soule, under penalty of perjury, declare as follows:

1. I am a nineteen-year-old resident of Boca Raton, Florida, in Palm Beach County and have personal knowledge of the information below.

2. I am a sophomore and female athlete at Florida Atlantic University (FAU) in Boca Raton, Florida. Competing in track and field is my passion.

***Athletics Background***

3. Sports are a huge part of my family. Both of my parents were multi-sport athletes. My dad competed in track, cross-country, baseball, and football. My mom was a competitive runner and figure skater, and now coaches figure skating.

4. My mom first coaxed me onto the ice rink at Rockefeller Center when I was just three years old. At age five, I started taking figure skating lessons. During elementary school, I began entering figure skating competitions—something I continued through my sophomore year of high school.

5. Figure skating was something my mom and I did together. We spent a lot of time on the ice, as she not only helped me learn to skate but even skated with me at times. By age thirteen, I was a volunteer figure skating coach helper, which turned into a paid coaching position at age fifteen. I continued coaching figure skating until I moved away for college.

6. The axel jump—a figure skating showstopper!—is my favorite figure skating element. Figure skating is not only a beautiful, graceful sport, but it is athletic too. It requires strength, speed, balance, and skill to execute those jumps and spins.

7. But I remember one thing very distinctively about figure skating: I did not like the scoring. Scoring was subjective; it was harder to clearly measure my achievements. (This is one reason I love track. My race times clearly show how fast I run so scoring is objective, not based on the subjective opinion of an individual judge.)

8. My mom introduced me to running when I was just five years old. I began running in our community's summer mile-long "fun runs" with my mom. Even at that young age, I knew two things with certainty: I loved to run, and I hated running long distances!

9. When I was around eight years old, my mom signed me up for my first Hershey Track and Field meet that was held in our town in the spring. It was the first time I set foot on a track—and I loved it. I realized that I was fast, and that I enjoyed competing to win. Running became my passion. And I enjoyed some success in the Hershey events as I competed there in

third through sixth grade. For example, I qualified twice for state level meets. In sixth grade, I won all three of my events.

10. After the Hershey events, I competed in the Nutmeg State games, the largest amateur multi-sport sporting event in my home state of Connecticut. These meets were ones my mom and I could do together. My favorite memory of the Nutmeg games was that my mom taught me how to long jump just a couple weeks before my first competition. And I went on to *win* the long jump that year for my age category.

11. But my freshman year at Glastonbury High School in Connecticut was my first school opportunity to compete in track and field. It was my first time on a school team with organized team practices and workouts—and I loved it.

12. Track and field competitions involve a variety of races and events. In track there are sprints, middle distance races, long-distance races, relay races, and hurdle races. And field events include long jump, triple jump, high jump, pole vault, shot put, discus throw, javelin throw, and hammer throw.

13. I am a short-distance sprinter and long-jumper. During high school, I competed in the 55-meter dash, 100-meter dash, 200-meter dash, the 4x200 and 4x100-meter relays, and the long jump. I also ran the 300-meter dash a handful of times.

14. When I joined my high school track team in my freshman year, I quickly became the school's best long jumper. And after only a few competitions, I became the permanent starter for the 4x200-meter relay.

15. I am proud of my high school athletic accomplishments. I was a ten-time All-Conference Honoree recipient, a five-time state title holder, three-time All New England award

recipient, a four-time National qualifier, and set five new Glastonbury high school records (including one that was previously set in 1976).

16. Track means everything to me. It is my passion and my happy place. When I run, I set aside everything else in life and just run.

***Facing Male Competition in Girls' Track***

17. But my high school track and field experience was not without frustration. During all four years of high school, I had the deflating experience of competing against male athletes in the girls' category.

18. The first time I competed against a male athlete in the girls' category was during my freshman year of high school at the May 2017 Middletown Invitational in the 200-meter dash. The gun went off at the start of the race, the male athlete left most of us girls in the dust. I knew immediately that this was not right and that girls would miss opportunities to succeed. Just days later, that same male went on to win the 2017 Connecticut Interscholastic Athletic Conference (CIAC) Class M Women's outdoor track championship in both the 100-meter and the 200-meter sprints.

19. The losses happened again and again. During my sophomore year, another male athlete joined girls' track and I had to face two male competitors at the 3rd Greater Bristol outdoor track and field invite in the 200-meter dash. The males took first and second; I crossed the finish line third. Had the males not been competing in the girls' category, I would have won that race.

20. These two males, Terry Miller and Andraya Yearwood, impacted my placement at statewide championship meets. At the 2018 CIAC State Open Championship in the Women's Outdoor 100-meter dash, the males again took first and second. Because of their participation in

the women's category, I was bumped down to sixth place when I should have earned fourth place.

21. But one of my more painful memories of loss involved the 2019 Connecticut State Open Championship. I missed qualifying for the state championship 55-meter final by just one spot, and the chance to qualify for the New England Regional championship by just two spots. The top two spots were taken by males. If not for those two male competitors in my race, I would have had the opportunity to compete in the championship final and for a coveted spot at the New England Regional championship.

22. While I was in high school, these two males collectively won 15 Connecticut women's state championship titles in girls' high school track and field and set 17 new individual meet records.

23. It is demoralizing and frustrating to compete against someone who has unfair physical advantages over you, because no matter how hard I train or how hard I try, there is nothing I can do to overcome that disparity. We girls train to win; not to win second place or receive a participation trophy. Some girls I know were so demoralized by the experience of losing to males that they abandoned certain track events and changed sporting events entirely. Other times coaches tried to convince girls to change their events just so the girls would have a chance to succeed.

24. Because of male competition, I have lost opportunities to compete at world class tracks. I have lost opportunities to compete in front of college coaches and scouts. I have lost opportunities to win titles and public recognition of my achievements. I have lost opportunities to win recognition and event points for my school.

25. And the heartbreaking thing is that my story is not unique. Many other girls across the state of Connecticut lost out on similar opportunities.

26. It felt so unfair. I knew I had to stand up. My parents and I reached out to school administrators and coaches. We reached out to CIAC officials to ask for a policy change. But no one would listen to us. Instead, they silenced us.

27. My parents and I were left with no other option but to file a federal lawsuit to protect the integrity of women's sports under Title IX. It was a huge step, a scary step. But someone needed to speak out for girls in Connecticut. That lawsuit is still ongoing.

### ***Competing in Women's Collegiate Athletics***

28. It was my dream to run track in college. Despite the unfairness of my high school track experience, I hoped to put that experience behind me and have a fresh start and level playing field in college.

29. After visiting several colleges, I decided to attend the College of Charleston in South Carolina. I attended the College of Charleston in 2020-21 for my freshman year. However, it was a tough school year with COVID and at the end of the year, I re-visited my options.

30. I received an offer to run for Florida Atlantic University, and I immediately knew that was the right fit for me. My dream has always been to attend college and run in Florida, and I finally have the opportunity to fulfill that goal. And I had always hoped to end up somewhere warm with lots of sunshine, so competing in Florida was a dream come true.

31. FAU has a NCAA Division I track and field team and competes in the East Division of Conference USA.

32. Being part of the team is quite an honor. And there are many additional side benefits to being a collegiate athlete: access to top-tier coaching, facilities, and equipment;

consultation with nutritionists and dieticians; paid travel to games, academic support services; medical and wellness care; access to psychologists; access to the NCAA Student Assistance Fund; team gear and apparel; and the opportunity to make money on my own name, image, and likeness.

33. For example, the Florida Panthers, a professional ice hockey team, recently announced that they were sponsoring FAU female athletes and giving us an opportunity to partner with them. I do not yet know all that will entail, but we receive tickets to home games, team apparel, the opportunity to partner with their brand. As athletes, we also have the opportunity to make money on our name, image, and likeness by appearing in ad campaigns for brands like Nike and Adidas.

34. At the end of the 2021-22 academic year, I will still have four more years of NCAA eligibility due to COVID.

35. My teammates and I train hard to win. We weightlift, complete running drills, and run sprints time and time again. It takes incredible work and dedication to win a race determined by hundredths of a second. I have trained much of my life striving to shave mere fractions of seconds off my race times.

36. I had to make many sacrifices over the course of my athletic career to play the sport I love. I have missed school dances and spring breaks, family events and holiday trips, and friends' birthdays and vacations. I have given up weekends and free time. I stayed late after school for practice. And the commitment to track has only increased during my time spent training in college.

37. But I make these sacrifices because I want to be the best that I can be. I want to win—not just for myself, but also for my teammates. And the motivation to win is what compels me to train as hard as I can.

38. I love my sport. I get on the track and I can let everything in my life go and I can be free to focus on running. It’s exhilarating to see all the training and hard work pay off on the track.

39. But track has taught me more than just how to run fast down the track. I have also learned life skills. It has taught me physical and mental toughness. I have learned perseverance and good sportsmanship. I have learned that hard work pays off. And that making sacrifices to excel at something reaps future benefits. It opened new financial opportunities, personal development opportunities, and even academic opportunities. And it has given me something to strive for.

40. I am currently majoring in criminal justice with the goal of being a lawyer. But I always have my eyes on the track, and I would love to go pro after college if the right door opens.

### ***Fairness in Women’s Sports***

41. When I heard that Florida’s legislature passed the Fairness in Women’s Sports Act in late April 2021 to protect the integrity of women’s sports, I enthusiastically supported it.

42. In fact, it was my incredible honor to be invited to attend the bill signing ceremony in early June 2021 because my own personal story had played such a role in motivating lawmakers to pass a bill protecting Florida’s female athletes. Little did I know at the time that Florida’s Fairness in Women’s Sports Act would later protect me, too, as I start competing for a public university women’s team in Florida.

43. When that law was later challenged in federal court, I decided to speak up for girls who are afraid of retaliation from the media, school officials, and coaches and filed a motion to intervene in the lawsuit. I fear that too many women feel pressured to remain silent about their real views. And if someone does not speak up for women, I fear that we could see the end of women's sports. There will be boys' sports and co-ed sports. But women's sports as we know it will be gone.

44. I know from my own past experience in high school that males competing in women's sports takes away opportunities from women—whether that is a spot on the team, a spot on the podium, an athletic scholarship, the ability to benefit from her likeness, or recognition and awards—and it defies the entire purpose of having separate women's sports.

45. Woman have fought hard for many years to have equal athletic opportunities. I want to make sure that girls in the future can continue to compete in the sports they love. If girls do not have equal opportunities, I fear they may choose not to be involved in sports at all if they feel they cannot win or possibly even get physically hurt competing against a stronger, faster male.

46. I believe that ensuring an equal playing field for women to be champions in their own sport is a women's rights issue. But this isn't just about fair play and winning for me. I want to protect the fairness and safety of women's sports for female athletes everywhere. I want to ensure that future generations of women have access to the same equal athletic opportunities that shaped me and my love of sports.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true  
and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF DARCY ASCHOFF**

1. I am a 2 year resident of Lehi, Utah, and have personal knowledge of the information below.

2. As a former collegiate athlete, high school varsity volleyball coach, and mother of two competitive high school volleyball players, I have observed the mental and psychological toll on female athletes of being forced to compete against a male.

***Athletic Background***

3. Volleyball runs in my family. My mom played as a youth, I competed in college, and now my daughters are star high school volleyball athletes with dreams of competing in college.

4. I began playing competitive volleyball as a freshman at Delta High School as a middle blocker. During my senior year, my volleyball team won the 1995 Utah State Championship, and I was awarded MVP (most valuable player) for our team.

5. Throughout my sophomore, junior, and senior years of high school, I also played club volleyball.

6. I was recruited and given a scholarship to play varsity volleyball at Dixie State College (now Dixie State University), an NCAA Division I school. From 1996 to 1997, I played for Dixie State College.

7. After my sophomore year of college, I transferred to Hawaii Pacific University, an NCAA Division II school, where I was also offered a volleyball scholarship. From 1998 to 1999 during my junior and senior years of college, I played volleyball for Hawaii Pacific University.

8. In 1998, during my junior year of college, my Hawaii Pacific volleyball team won the NCAA Division II Nationals Championship. This was the highlight of my volleyball career.

9. In 2016, my entire Hawaii Pacific University volleyball team was inducted into Hawaii Pacific's Hall of Fame to honor our 1998 Nationals Championship.

10. I continued to play volleyball recreationally after college. My two daughters, Ajah and Jahslyn, have said that one of their earliest memories is watching me play recreational volleyball at a park across the street from our home. I would bring my daughters with me, and Ajah would beg whoever was on the sidelines not playing volleyball to pass the ball with her.

11. Both of my daughters went to volleyball summer camp at young ages, and eventually began competing in school and club volleyball.

12. As my girls reached high school, I started coaching their school and club teams.

13. In 2015, I coached Lanakila club volleyball for the 14 and under team, and in 2016 I coached Lanakila club volleyball for the 12 and under team, respectively.

14. From 2018 to 2020, I also coached girl's Hawaiian Style Volleyball, a competitive club volleyball team on Maui. In the 2018-2019 season, I coached the girls' 14 and under team, and in the 2019-2020 season I coached the girls' 16 and under team.

15. I served as assistant girls' varsity volleyball coach at Maui High School during the 2018 and 2019 seasons. Maui High School competes in the Maui Interscholastic League of the Hawaii High School Athletic Association.

***My Daughters' Experience Competing Against a Male Athlete***

16. The 2019-2020 volleyball season was my girls' final volleyball season at Maui High on our beloved island of Maui. Ajah was a sophomore and a team captain, and Jahslyn was a freshman. The Maui High team was a young team in a building season.

17. Ajah and Jahslyn worked so hard to develop their volleyball skills to become their best. They attended summer camps, participated in daily practice during high school season, and then continued to play volleyball year-round with highly competitive national club teams. These teams travel nationally and practice 2-3 times per week.

18. But despite my daughters' hard work, the 2019-2020 varsity girls' volleyball season was unusually tough: they were forced to face a male athlete on another team.

19. Both of my daughters knew this athlete, Jhene Saribay, from summer volleyball camps because training is co-ed. From what I learned, this male competed on the Kamehameha boys' volleyball team for several years, and only recently switched to competing on the girls' team.

20. My daughters heard rumors from other girls on the Maui High team that this male athlete was planning to play on the Kamehameha High girls' varsity volleyball team, but at first they didn't believe it.

21. I first heard about the situation from the Maui High head coach. Initially I thought it was a joke: this could not be happening. But it was. And our coach's hands were tied—the Maui High athletic director made clear that our head coach could not make waves about this situation, or he would lose his job. Other parents at Maui High were upset but were not willing to act.

22. My daughters competed against this athlete 3 times and their volleyball team lost every match.

23. Based on my observations as a mother and assistant coach at my daughters' volleyball games, this male athlete dominated Maui varsity girls' volleyball in the 2019-2020 season. He dominated playing time. He jumped higher. He spiked the ball harder and faster and further. From my perspective, he was one of the best hitters on Maui, despite his average stature.

24. The girls, on the other hand, were nervous and intimidated by the male on the other side of the net. They seemed mentally defeated before stepping onto the court. They would often "duck and cover" or assume a defensive position rather than prepare to respond to his spikes. My daughters said they were afraid of getting hurt. My daughters' teammates told us that they felt demoralized. Some wondered why they should even bother playing in matches against Kamehameha that season, because they knew the male athlete's team would beat them.

25. Volleyball is a very physical sport. And a male competing in girls' volleyball is a safety issue. I'm concerned that one of my daughters could be hurt, or that a male could take away their scholarship opportunities to compete in college.

26. Both of my daughters love the friendships they built through volleyball, as well as the comradery and competitive nature of the sport. They grew stronger and more powerful in hitting and jumping. They gained self-confidence and poise. I am proud of their hard work and drive to be the best they can be at their sport. Volleyball is all about testing your limits—how high you can jump, fast you can run, hard you can swing—and knowing that males have an advantage makes it hard for girls to compete.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF CYNTHIA MONTELEONE**

I, Cynthia Monteleone under penalty of perjury, declare as follows:

1. I am a forty-six-year-old resident of Lahaina, Maui County, Hawaii, and have personal knowledge of the information below.

2. I am a mother, a coach, and track and field athlete for Team USA. Both my daughter and I have had the frustrating experience of competing against a male athlete in our sport.

***My Competition Against a Male Athlete***

3. In September 2018, I competed at the World Masters Athletics Championships in Malaga, Spain. I was eager to put my hard work to the test. And it paid off: I took bronze in the W40 400, along with USA golds in the 4x100 and 4x400.

4. But I was shocked to find out that one of my competitors was a biological male from Colombia who had just recently started identifying as female. The athlete had a much larger build than any of the female athletes.

5. I began to ask questions as to the fairness of this issue. The European officials stopped the track meet, conferred, and decided that the race had to continue and urged me to file a complaint with the Team USA managers.

6. Not only did the Team USA managers refuse to file a complaint or inquiry, they warned that for my own safety, I should not speak up about this issue.

7. My freedom of speech is important to me. I will not be silenced. I continue to defy this directive and speak up because I see firsthand the harm being done to my fellow female athletes.

8. This is not about being a sore loser—I beat the male athlete by just a few tenths of a second. This is about fairplay for all women. The same male athlete just a year later beat my USA teammate in the hurdles for a place on the podium at the 2019 World Masters Athletics Championships in Poland.

9. I see the psychological and emotional heartbreak of women. After training so hard to be the best that they can be at their sport, and spending so much time away from their families, they are devastated to see that sacrifice wasted because they were beaten by a biological advantage that no amount of training or sacrifice can overcome.

10. Many of the girls I coach suffer from anxiety over having to compete against male athletes. We all know the powerful scientific neurotransmitter connection between our minds and our bodies: When you *think* you can win, you have a better chance of doing it. It's proven.

11. Science and common sense tell us that male and female bodies are different. No amount of testosterone suppression can change the amount of myonuclei in a male body, making it easier at any point in their life to build more muscle than the female sex. Not only that these cellular level advantages dictate that male bodies will be more powerful with faster twitch fibers than those of the female sex.

12. Women are not just hormones. Our athletic performance is impacted by our cycle, birth control, and pregnancy—something no male who identifies as female has to address.

13. As a masters athlete, I am especially concerned because female hearts shrink as we age, while the male hearts enlarge, all of this despite any “hormone treatment.”

***My Daughter's Competition Against a Male Athlete***

14. But it was not just on the world stage that I experienced the demoralizing trend of males displacing females in their own competitions; it was also on my home island of Maui, Hawaii.

15. A year and a half after my experience in Spain, my daughter, Margaret, lined up for her very first high school track meet. I had watched proudly as my strong and determined girl did all the right things – made personal, difficult sacrifices to train her body to be as fast and fit as possible for her first race.

16. Yet all her hard work seemed for naught as she raced against a male-bodied athlete who had just transferred from the boys' volleyball team to the girls' team the season before. The athlete breezed right by Margaret to win first place, pushing her into second place.

17. My daughter lost her very first race to this athlete who ran so fast in the first 100 meters of the 400-meter race that the individual could have set a state record.

18. The Maui athletic community is small and tightknit. I learned that this biological male had grown up wrestling and had just injured a girl during volleyball, giving her a concussion with a powerful spike. This individual was casually trying out track and had trained only two weeks before running next to my daughter who had trained all year.

19. This athlete also raced against the girls I coached. One senior girl was crying because she told me she knew there was nothing she could do to win the conference championship that she had dreamed of winning since she was a freshman. She told me, right after that male athlete raced, that she was quitting track, even though I told her she had what it took to possibly run in college. She turned to me and asked, “What’s the point, if it’s not fair?”

20. COVID cancelled the rest of our season, but these horrible memories were never cancelled from my mind. We must consider the mental and physical health and safety of the biological female athletes and provide an equal and level playing field for them to achieve all of the opportunities the male sex has.

21. We must not hold the feelings and mental health of one group as more important than another. The mental health of our daughters, granddaughters, sisters, and teammates matter.

22. All of the lessons I teach as a coach about hard work paying off: these lessons fall apart when a mid-level male athlete doesn’t have to work as hard and can beat our hardest working, most talented females.

23. In 2019 in Hawai’i, about 350 out of 700 male athletes ran faster than the fastest female in Hawai’i. Quite literally, a mediocre boy could beat the best girl. Tens of thousands of high school boys could run faster than the most decorated Olympian in history, Allyson Felix. If we do not protect women’s sports, our girls will see their athletic dreams crushed.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF MADISON KENYON**

I, Madison Kenyon, declare as follows:

1. I am a twenty-year-old resident of Pocatello, Idaho, and have personal knowledge of the information below.

2. I am a junior and female athlete at Idaho State University in Pocatello, Idaho, where I compete in women's cross-country and track. Running is my passion.

***Athletics Background***

3. Athletics has been my world from a very young age. Both of my parents were high school athletes, so competition—especially among my siblings—was like the air I breathed growing up.

4. I first kicked a soccer ball at age three, and I was hooked. That first encounter with a ball led me to compete for 15 years on various club soccer teams.

5. Through playing soccer, I learned both that I am fiercely competitive and that I love to run.

6. Admittedly, I hated running at first, because it is hard work. But the more I ran, the faster I got and the more I enjoyed it.

7. In 6th grade, that love of running and competition led me to try cross-country—a sport I have competed in every fall since. In my freshman year of high school, I also started running track.

8. Running is my happy place. I love pushing my body to its limits, spending time outdoors, and doing it all with a sense of camaraderie and fun alongside some of my closest friends.

9. I'm proud of my accomplishments. In high school, I set five different school records, and as a sophomore was even voted unanimously by our coaches for the honor of “athlete of the year.”

### ***Competing in Women's Collegiate Athletics***

10. I decided to attend college at Idaho State University (ISU) because it is a big university nestled in a small town with plenty of opportunities for outdoor activity and track competition. The athletic scholarship I received from ISU has not only helped finance my athletic career but has also helped finance my dream of becoming a nurse someday. I am currently pursuing a degree in nursing.

11. As an ISU freshman in the 2019-2020 academic year, I made the cross-country team and competed in the 4-kilometer (2.49-mile), 3-mile, 5-kilometer (3.12-mile), and 6-kilometer (3.73-mile) events. I was thrilled.

12. But that enthusiasm turned into confusion when, at the start of the fall 2019 cross-country season, I was informed that I would be competing against a male athlete.

13. At first, I was incredulous that any biological male would be allowed to compete in the women's category. This couldn't be happening.

14. So I researched the student. I found out that June Eastwood competed on the University of Montana's men's cross-country team for three years, before switching to compete on its women's cross-country team. I also learned that while competing as a man, Eastwood ran times in at least one event that was faster than the NCAA collegiate women's record. My heart sank.

15. So as I got into position at the starting line of my first ever collegiate cross-country race, I faced a hurdle I never expected to encounter: a male athlete.

16. In the 2019 cross-country season, I lost to Eastwood three times:

- a. 2019 Montana State Cross-Country Classic in the 3-mile event.
- b. 2019 Big Sky Cross-Country Championships in the 5k event.
- c. 2019 NCAA Division I Mountain Region XC Championships in the 6k event.

17. In all three races, Eastwood not only beat me by a significant margin, but also bumped me down to a lower placement than I would have received had I only competed against other women. That may not seem like a big deal to some, but placements matter to athletes. I want to know that I earned my placement fair and square. Fair competition pushes me to better myself and try harder; unfair competition leaves me feeling frustrated and defeated.

18. It was discouraging. My heart sank as I watched Eastwood placing and medaling in the women's cross-country races in meet after meet.

19. Cross-country athletes, like me, usually also compete in indoor and outdoor track. So, during the winter 2020 indoor track season, I competed in the 3k (1.86-mile), the mile, and the distance medley relay events.

20. Again, I raced this male athlete during the indoor track season. At the 2020 Stacy Dragila Open Women's Indoor Mile, Eastwood took 2nd place and I took 8th. Eighth place is nothing to be ashamed of if won fairly—especially as a freshman competing in a race dominated by juniors and seniors—but the competition is not fair when one of the athletes in the women's category is a male with the strength and speed advantages that come from male physiology.

21. And at the 2020 Indoor Big Sky Championship I, along with three other ISU teammates, competed in the distance medley relay against Eastwood's relay team. A distance medley relay is made up of a 1200-meter leg, a 400-meter leg, an 800-meter leg, and a 1600-meter leg. Montana State's relay team was in 6th place before Eastwood began the final 1600-meter leg of the race. During Eastwood's leg, Eastwood advanced Montana's relay team not one or two, but *four* positions to finish in 2nd place. My team took 5th, though we would have placed 4th if not for Eastwood's participation. We lost not only a placement, but team points as well.

22. Also at the Big Sky Championship, I watched in disbelief as one of my teammates lost her bronze medal and place on the championship podium because Eastwood took first place in my teammate's women's mile event and bumped her to fourth place. It was heartbreaking to watch.

### ***Fairness in Women's Sports***

23. I believe that allowing males to enter women's sports defeats the entire idea of fair competition. Sex segregation in sports helps maintain fair competition so that no athlete has an unfair advantage over another. And it helps ensure that if women like me work hard, we have a shot at winning.

24. I am studying nursing and plan to enter the medical field. In my biology coursework, it is clear that the biological differences between male and female are not matters of personal opinion, or features that can be changed or chosen. I *am* female, not because I chose to be female, or identify as female, but because every cell in my body is marked with XX chromosomes and my entire body developed in alignment with those female markers.

25. But you do not need to be a medical expert to understand this. I know from everyday experience that since the boys in my class went through puberty, the males around me are generally bigger, faster, and stronger than the females, simply because they are male. Even the rules of sport implicitly acknowledge this. For example, men's cross-country races are longer than women's cross-country races.

26. In March 2020, Idaho became the first state in the country to pass a law to protect women's sports. H.B. 500, the Fairness in Women's Sports Act, protects women's sports by ensuring that only female athletes compete in sports designated for women or girls. I intervened in a lawsuit to help defend that law because I want my races to be fair and a test of skill and hard work. I do not want to wonder whether I am training countless hours for inevitable defeat, or whether I will even have a chance to win against a physically advantaged male athlete.

27. I fear that if we are no longer allowed by law to recognize the objective existence of women, that it will be a huge loss to women's rights.

28. Sports was like the air I breathed growing up, and I want my kids to have that same experience. And as hard as my teammates and I work to be competitive, I do not want to see women's sports fade away as a separate category because males compete in women's divisions, and women give up trying to compete because they do not think they can win. I fear that we will soon effectively have men's sports and co-ed sports, but no dedicated category for females only.

29. And I do not want to see women lose their legal protection and progress under the law because we can no longer identify what a woman is.

30. To my knowledge, June Eastwood has graduated. But I learned through my involvement in defending Idaho's Fairness in Women's Sports Act that another male, Lindsay Hecox, wants to compete on the women's team at Boise State University—a university that my team competes against. And if Title IX and Idaho's law aren't upheld, other males will almost certainly follow.

31. I believe everyone should be able to compete, but it must be done fairly. It is not fair for women's competitions to be open to male athletes. And women's sports itself will lose its meaning, and its specialness, if males can be redefined as females.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF MARY MARSHALL**

I, Mary Marshall, declare as follows:

1. I am a twenty-one-year-old resident of Twin Falls, Idaho, and have personal knowledge of the information below.

2. I am a senior and female athlete at Idaho State University in Pocatello, Idaho, where I compete in cross-country and track and field.

***Athletics Background***

3. I first started playing basketball at 7 or 8 years old, and I continued through my sophomore year of high school. I enjoyed the competition, the adrenaline rush, and the sheer fun of the game.

4. In 8th grade, I started running track. My sophomore year of high school I started running cross country to get in shape for basketball. But to my surprise, I found out that I loved running *more* than playing basketball! So, I kept running races. And my sophomore year of high school, I dropped basketball altogether and started focusing on cross country and track.

5. I discovered that I am good at running. In two back-to-back years, my high school medley relay team won the State championship in our division. My junior year I won the state championship in the 300 intermediate hurdles. And in my senior year of high school, I won the State championship in the 800m for my division.

6. I love to run. It gives me confidence, improves my mood, and allows me to explore the great outdoors on foot. But being a competitive female athlete is about more than just running long distances. It is about community. My teammates have become my closest friends. We push each other to be our best, help one another through disappointments and losses, and cheer one another on as we celebrate victories. We travel together for sporting events and share overnight lodging: it's like a sisterhood. We enjoy one another so much that we even spend our free time together. Through running competitively, I have made some of my closest lifelong friends.

### ***Competing in Women's Collegiate Athletics***

7. I chose to attend college at Idaho State University (ISU) because it is close to home and I really liked my track coaches. And I am grateful to be one of the lucky ones to benefit from a women's track scholarship.

8. In college, I am primarily a mid-distance track athlete, focusing on shorter distances like the 800-meter and the mile. But I also compete in cross-country to stay in shape. In cross-country, I generally compete in the 5k.

9. Training is hard work. On Tuesdays and Thursdays, I usually have a two-hour workout with my team. On alternate days, my teammates and I get together for a five-to-six-mile run. Additionally, we have an hour-long weightlifting session on Mondays and Wednesdays.

10. But in the fall of my sophomore year of college, I learned that I would be racing against a male athlete who was competing on the University of Montana women's team because he identifies as female. I was appalled. I do not know how anyone could think this was fair to female athletes. Males are naturally fitter and faster than females.

11. I raced against this athlete, June Eastwood, not once, but twice. First, I competed against Eastwood in the Montana State Cross-Country Classic 3-mile event in the fall of 2019. And then I competed against Eastwood again in January 2020 at the Stacy Dragila Indoor mile event.

12. I lost both times. I was displaced and pushed down to a lower spot in the rankings than I would have earned had the playing field been level.

13. When I lose to another woman, I assume that she must train harder than I do and it drives me to work harder. If I lose to a man, it feels completely different. It's deflating. I wonder whether he works as hard as I do, whether he was even trying, or was that an easy race for him. It makes me think that no matter how hard I try, my hard work and effort will not matter.

14. Members of the men's track team sometimes do easy runs with me and my teammates on the women's track team. But we women are under no illusion that we would be competitive in a race against these men. Even our easy runs are at different paces. For example, an easy run for women is usually at an 8:30 pace, while an easy pace for men is around 7:30.

***Fairness in Women's Sports***

15. When I first heard about Idaho's H.B. 500 Fairness in Women's Sports Act, I was really excited. I hoped that this would be the solution we needed to keep men out of women's sports. And that's why—when the law was later challenged in court — I chose to stand up and intervene in the lawsuit to defend the law. I wanted to make sure that the voices of women were heard.

16. I have personally seen the negative impact on women when Eastwood was allowed to compete against women's teams, and I fear that as men realize they only need to “identify” as women in order to compete in the women's category, others might follow suit. In fact, I learned through my lawsuit that a male athlete, Lindsay Hecox, wants to compete on the Boise State women's track and cross-country team—a team that I compete against. I want to stop this before it becomes popular.

17. I want to preserve the camaraderie and sisterhood that comes from competing with an all-female team. There is no way that I would feel comfortable sharing a hotel room with a male athlete, regardless of how that person identified.

18. And I want other young women to benefit from sports as I did. I did well in high school sports. But if a boy had decided to compete against me in basketball, or track, or cross-country, I am not sure that I would have kept on competing. Success drives endeavor. And if I knew that I could not win, I might have dropped out of sports altogether.

19. That very idea concerns me. Sports has played such an important role in my life. It taught me how to work in groups and as a team. It taught me how to persist through disappointment. It taught me that if I put in the work, I will get the results. It has taught me how to interact with people I do not know, and how to respond to those in authority over me. It has

given me the confidence to study business, marketing, management, and economics at ISU because I hope to be an entrepreneur and own a business someday. These are the benefits that I want to preserve for the next generation of women.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

*Defendants*

and

LAINEY ARMISTEAD,

*Defendant-Intervenor.*

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF HALEY TANNE**

I am a 22 year-old senior at Southern Utah University and have personal knowledge of the information below.

***Athletic Background***

1. I have always loved running. As a kid, I was fast and could outrun a lot of people. But I didn't get into running seriously until the summer before my freshman year of high school. My older sister (who later ran in college) "forced" me to get up early with her and run. Once I got into shape, I loved it.

2. As a high school freshman, my coach pulled me aside and said that I had the potential to run in college. I was surprised!

3. And I started training harder. My family wasn't financially well off so I worked hard to earn the participation fees and gear fees to run in high school. I worked in my coach's woodshop over the summer, and later transitioned to be a pool instructor to earn money.

4. It was a lot of work. I worked throughout my summers, went to bed early and missed out on the typical teenage experience of my peers.

5. In high school, I was our school's top ranked female athlete. I felt a lot of pressure being at the top. But the desire to be the best and potentially earn a scholarship for college kept me pushing to stay at the top.

6. Being a female athlete is not easy and requires sacrifice. To get faster and hold my spot required a lot of self-discipline in my diet, bedtime, and homework.

7. My teammates say I'm fiercely loyal. I'm hardworking, smart, reliable, and I invest deeply in relationships.

8. I love racing! I love the feeling when my legs are burning, almost numb, lungs are burning, arms are burning and so fatigued. But when you cross that finish line, all the pain melts away.

9. There are never "days off" in the life of a distance runner. You have to really love running to excel in this sport. I have many favorite runs near the Southern Utah University campus. I love the Canyon Run, Dikes Run, and the Main Street Run. I love running in this part of Utah and losing myself to the scenery. It gives me temporary relief from stresses or negative emotions I'm facing.

10. When I was deciding on which college to attend, I looked all throughout Utah. I had many options, and many schools were interested. But I ultimately decided to go to Southern Utah University because of the team dynamic and the kind, caring, and capable coaches.

11. Going to college was something that was not a likely option for me because of the low-income status I came from. Gratefully, running allowed me to earn a scholarship and attend college. Running has completely shaped my college career. It has taught me even greater discipline than I had in high school. I have learned mental toughness from hard workouts and practices. I have also developed many leadership traits from being on a team, and even though I am one of the youngest runners on the team as a sophomore, I still have a position of leadership.

12. My teammates have made my college athletic career worth it. We are with each other through anything and everything. My teammates have seen me at my lowest lows and my highest highs. It is a special bond, and we are all so close. While we have a lot of personalities on the team, we all mesh together so well. I love my teammates and every one of those girls means the world to me.

13. One day I want to be nurse and nursing school will be my next step. I've always been interested in the human body and medicine and I have always wanted to be involved in a health career. After nursing school, I would like to settle down and move forward in my career and have a family.

### ***Competition Against a Male Athlete***

14. I remember learning that there was a male signed up to compete on the women's cross-country team at the University of Montana. My coach sat us all down before the season started and informed us that there was a male who transitioned and would be racing against us. I remember being so shocked. I never imagined this would happen in my lifetime.

15. This male, June Eastwood, had competed on the men's team for three years and was not an exceptional athlete. But even as a mid-level runner, Eastwood posted times that were faster than women's NCAA records.

16. I competed against Eastwood twice and I lost to Eastwood both times. The first time I competed against Eastwood was in the 2019 Big Sky Cross Country Championships. I also competed against Eastwood in the NCAA Division 1 Mountain Region Cross Country Championships.

17. One of my teammates, Madison Fruchey, was also knocked off from being an All-Conference athlete because of June Eastwood's involvement. Eastwood was in the top-10 and Madison was 11<sup>th</sup>. You can mentally exclude Eastwood from the top 10, but when the All-Conference list was published, Madison's name was not on it.

18. Eastwood's participation is frustrating. My teammate lost opportunities for accomplishments she worked hard to achieve. I do not want to have anger towards Eastwood, but when I see Eastwood lining up in a women's race, it just feels wrong.

19. Eastwood has an advantage when competing. Us women are already at a loss once Eastwood stands at the starting line. Eastwood's presence is intimidating, and it is hard to mentally compete at our best when we know we can't win.

20. Males run track with more physicality than women. They throw elbows and compete with a more aggressive strategy. They are especially more aggressive in college and when they progress to more elite races.

21. Like I mentioned earlier, obtaining an athletic scholarship was vital to pursuing my dream of being a nurse. Running was the only way I could afford to participate in academic programs at my school. When I heard Eastwood was participating on the University of Montana's girls' team through a girls' scholarship, it was frustrating. There is a limited number of athletic scholarships that each school can distribute, and Eastwood took an opportunity from

another woman. It makes you wonder if there may have been another female athlete in my shoes that may not have been able to afford school without an athletic scholarship.

***Fairness in Women's Sports***

22. Title IX was created to provide a space for women, like me, to compete on a fair playing field and be a champion in my own sport. But allowing males to compete in women's sports destroys that opportunity and sets women back half a century.

23. Generally speaking, males are stronger, faster, and bigger than woman. June Eastwood towered over the female competitors like me. And if men take over, I fear that women will lose the drive to compete in the sport altogether.

24. Eastwood displaced women in races and in scholarships. Because of Eastwood's involvement, a woman missed the opportunity to receive an athletic scholarship and may have impeded her ability to attend school at all. Women should not have their opportunities taken by biological males.

25. I decided to stand up and speak out because I don't want my daughters to have to deal with what I've had to deal with. I want to protect women's sports for all the women that will come behind me.

26. I know what I'm doing is right and I know what we're fighting for is right.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Case No. 2:21-cv-00316

Hon. Joseph R. Goodwin

**DECLARATION OF LINNEA SALTZ**

I, Linnea Saltz, declare as follows:

1. I am a resident of Washington, D.C., and a former elite track athlete at both Southern Utah University and Georgetown University.

***Athletic Background***

2. Growing up, I loved cheer, gymnastics, and dance. But with a brother who ran cross-country and a mother who ran triathlons, I decided to try out for track my sophomore year of high school. I surprised everyone—including myself—by running the fastest time of my high school tryouts in the 400-meter.

3. That initial success on the track led to a love of running. I joined my varsity girls' track team and even competed on a club team. By my senior year, I gave up all other

extracurricular activities and focused on getting faster and stronger in order to be the best version of myself.

4. That hard work paid off with an athletic scholarship to run track for Southern Utah University. I received offers from bigger schools, but ultimately chose to attend SUU because I could tell they really cared about their athletes.

5. Being a student-athlete opened doors for me to make connections on campus and provided a ready-made support and friendship network in my teammates.

6. But being a collegiate athlete is not easy. It involves early morning workouts and afternoon practices; weekend travel for meets; and lots of self-discipline in diet, bedtime, and homework. I missed out on sleeping in, spring break, and social events.

7. But it was absolutely worth it. Every time I earned a new Big Sky Championship medal or put my name on the record book for my school, it made all the sacrifice worth it.

8. I am proud of what I achieved in my time at SUU. I am a two-time Big Sky Champion in the 800-meter, once in outdoor and once in indoor. And by the time I graduated, I held seven school records:

- indoor 4x400-meter relay,
- indoor distance medley relay,
- indoor 400-meter,
- indoor 600-meter,
- indoor 800-meter,
- outdoor 800-meter,
- outdoor 4x4 relay.

#### ***Competition against a male athlete***

9. My senior year of college, I learned about a male athlete at the University of Montana who would be competing in women's cross-country and track.

10. This male, June Eastwood, had competed for three years on the men's team and was not a stand-out athlete. But even as a mid-level male athlete, Eastwood still posted times as a man that were faster than multiple women's NCAA records.

11. In the fall of 2019, Eastwood bested some of my teammates in cross country competitions. I thought it was so unfair. Why would someone who knows they have a physiological advantage over these women compete against them?

12. After my teammates' experience, I spent weeks reading the NCAA's transgender handbook. The NCAA policy at that time—which had been in place since 2011—required males to undergo one year of testosterone suppression before competing on a women's team. I thought this could not be true. I could see for myself that testosterone suppression did not eliminate the male advantage. (Thankfully, the NCAA scrapped that old policy in late 2021, but did not replace it with any policy that actually protects female athletes.)

13. In the winter of 2020, I learned that Eastwood would be competing in the indoor Big Sky Conference Track and Field Championships.

14. As the defending 800-meter Big Sky Conference Champion, I immediately jumped online to see what I was going to have to be competing against this season. All hope was lost when I realized that the male athlete was going to be competing against had a personal best time of 1:55 in the 800-meter, not only 10 seconds faster than the best time I had posted the season prior, but faster than the NCAA women's record in the event.

15. I took a step back and realized that my senior year was no longer going to be about the sacrifices, hard work, pain, and dedication I had put forth the last four years. It was going to be about fairness in women's sports being stripped away right in front of me. Title IX was passed in order to create an equal and fair playing field for all—yet allowing male athletes to

compete in women's sports discourages young women and deters them from their sports. Sports that encourage independence, strength, strong will, and give you the confidence of being a competitive athlete.

16. Instead of looking forward to my races, I was anxious. I could not bear the thought of losing my Big Sky Championship title to a former male athlete. I tried hard to focus on my training, but it was mentally exhausting to anticipate racing a male athlete with all the advantages of male puberty.

17. To my relief, Eastwood did not enter the 800-meter race. But I competed against Eastwood in the distance medley relay (DMR). In the middle of that relay, after finishing my leg, I overheard the University of Montana coach cuing this athlete from the sidelines, telling Eastwood to do something I had never heard in competition: to slow down. Eastwood took the University of Montana's relay team from nearly the bottom of the pack to a 2nd place finish.

18. Eastwood also bested some of my SUU teammates in the women's mile at Big Sky. Remarkably, this athlete finished four seconds ahead of the next competitor—a massive amount of time in an elite track competition.

### ***Fairness in Women's Sports***

19. Female-only sports exist for a reason: to give women like me the chance to podium, showcase our talents, and receive the recognition our hard work and talent deserve. But allowing a male to compete in the women's category shatters these opportunities.

20. Simply by observation, males are generally bigger, faster, and stronger than women. Eastwood's over six-foot-tall frame towered over the female competitors. June's cadence, stride length, broader shoulders, and lack of fatty tissue around the hips and chest all

spoke to June's male advantage. Personally, I would find it demeaning to stand on the podium beneath an athlete that had been on the podium with boys a couple years ago.

21. It is mentally draining to run against a male athlete. While in prior years I could just focus on my training, in 2020, I spent a lot of time in preseason stressing over competing against a male.

22. It only takes three males to displace females on the podium. And only eight males to displace females from All-Conference honors, and even worse from first-team All-American status which some women athletes could only dream of accomplishing.

23. I don't want to look back at the SUU school record books five or ten years down the line to find my name erased by males.

24. Because if men take over, I fear that women will lose the drive to compete in sports entirely.

25. Men are able to celebrate fairness in their sports, so it should only make sense that we can as well. It is discouraging for girls and women to think that they may have to compete against an individual that has a biological advantage over them. Taking away our opportunities will run us out of the sports world, which we already had to fight so hard to be a part of.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

## Personal Qualifications and Disclosure

I serve as Professor of Exercise Science in the Department of Kinesiology and Sport Sciences at the University of Nebraska Kearney, where I teach classes in Exercise Physiology among other topics. I am also the Director of the General Studies program. I have served as a tenured (and nontenured) professor at universities since 2002.

In August 2002, I received a Doctor of Philosophy degree from Iowa State University, where I majored in Health and Human Performance, with an emphasis in the Biological Bases of Physical Activity. In May 1999, I received a Master of Science degree from Iowa State University, where I majored in Exercise and Sport Science, with an emphasis in Exercise Physiology.

I have received many awards over the years, including the Mortar Board Faculty Excellence Honors Award, College of Education Outstanding Scholarship / Research Award, and the College of Education Award for Faculty Mentoring of Undergraduate Student Research. I have authored more than 40 refereed publications and more than 50 refereed presentations in the field of Exercise Science. I have authored chapters for multiple books in the field of Exercise Science. And I have served as a peer reviewer for over 25 professional journals, including *The American Journal of Physiology*, the *International Journal of Exercise Science*, the *Journal of Strength and Conditioning Research*, and *The Journal of Applied Physiology*.

My areas of research have included the endocrine response to testosterone prohormone supplements in men and women, the effects of testosterone prohormone supplements on health and the adaptations to strength training in men, the effects of energy drinks on the physiological response to exercise, and assessment of various athletic training modes in males and females. Articles that I have published that are closely related to topics that I discuss in this white paper include:

- Studies of the effect of ingestion of a testosterone precursor on circulating testosterone levels in young men. Douglas S. King, Rick L. Sharp, Matthew D. Vukovich, Gregory A. Brown, et al., *Effect of Oral Androstenedione on Serum Testosterone and Adaptations to Resistance Training in Young Men: A Randomized Controlled Trial*, JAMA 281: 2020-2028 (1999); G. A. Brown, M. A. Vukovich, et al., *Effects of Anabolic Precursors on Serum Testosterone Concentrations and Adaptations to Resistance Training in Young Men*, INT J SPORT NUTR EXERC METAB 10: 340-359 (2000).
- A study of the effect of ingestion of that same testosterone precursor on circulating testosterone levels in young women. G. A. Brown, J. C. Dewey, et

al., *Changes in Serum Testosterone and Estradiol Concentrations Following Acute Androstenedione Ingestion in Young Women*, HORM METAB RES 36: 62-66 (2004.)

- A study finding (among other things) that body height, body mass, vertical jump height, maximal oxygen consumption, and leg press maximal strength were higher in a group of physically active men than comparably active women, while the women had higher percent body fat. G. A. Brown, Michael W. Ray, et al., *Oxygen Consumption, Heart Rate, and Blood Lactate Responses to an Acute Bout of Plyometric Depth Jumps in College-Aged Men And Women*, J. STRENGTH COND RES 24: 2475-2482 (2010).
- A study finding (among other things) that height, body mass, and maximal oxygen consumption were higher in a group of male NCAA Division 2 distance runners, while women NCAA Division 2 distance runners had higher percent body fat. Furthermore, these male athletes had a faster mean competitive running speed (~3.44 min/km) than women (~3.88 min/km), even though the men ran 10 km while the women ran 6 km. Katherine Semin, Alvah C. Stahlnecker, Kate A. Heelan, G. A. Brown, et al, *Discrepancy Between Training, Competition and Laboratory Measures of Maximum Heart Rate in NCAA Division 2 Distance Runners*, JOURNAL OF SPORTS SCIENCE AND MEDICINE 7: 455-460 (2008).
- A presentation at the 2021 American Physiological Society New Trends in Sex and Gender Medicine Conference entitled “Transwomen Competing in Women’s Sports: What We Know and What We Don’t”. I have also authored an August 2021 entry for the American Physiological Society Physiology Educators Community of Practice Blog (PECOP Blog) titled “The Olympics, Sex, and Gender in the Physiology Classroom.”

A list of my published scholarly work for the past 10 years appears as an Appendix.

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

### Purpose of this Declaration

I have been asked by counsel for Defendant State of West Virginia and Intervenor Defendant Lainey Armistead in the matter of *B.P.J. by her next friend and mother Heather Jackson, v. State of West Virginia State Board of Education, et al.* to offer my opinions about the following: (a) whether males have inherent advantages in athletic performance over females, and if so the scale and physiological basis of those advantages, to the extent currently understood by science and (b) whether the sex-based performance advantage enjoyed by males is eliminated if feminizing hormones are administered to male athletes who identify as transgender (and in the case of prepubertal children, whether puberty blockers eliminate the advantage). In this declaration, when I use the terms “boy” or “male,” I am referring to biological males based on the individual’s reproductive biology and genetics as determined at birth. Similarly, when I use the terms “girl” or “female,” I am referring to biological females based on the individual’s reproductive biology and genetics as determined at birth. When I use the term transgender, I am referring to persons who are males or females, but who identify as a member of the opposite sex.

I have previously provided expert information in cases similar to this one in the form of a written declaration and a deposition in the case of *Soule vs. CIAC* in the state of Connecticut, and in the form of a written declaration in the case of *Hecox vs. Little* in the state of Idaho. I have not previously testified as an expert in any trials.

The opinions I express in this declaration are my own, and do not necessarily reflect the opinions of my employer, the University of Nebraska.

I have been compensated for my time serving as an expert in this case at the rate of \$150 per hour. My compensation does not depend on the outcome in the case.

## Overview

In this declaration, I explore three important questions relevant to current discussions and policy decisions concerning inclusion of transgender individuals in women's athletic competitions. Based on my professional familiarity with exercise physiology and my review of the currently available science, including that contained in the many academic sources I cite in this report, I set out and explain three basic conclusions:

- At the level of (a) elite, (b) collegiate, (c) scholastic, and (d) recreational competition, men, adolescent boys, or male children, have an advantage over equally aged, gifted, and trained women, adolescent girls, or female children in almost all athletic events;
- Biological male physiology is the basis for the performance advantage that men, adolescent boys, or male children have over women, adolescent girls, or female children in almost all athletic events; and
- The administration of androgen inhibitors and cross-sex hormones to men or adolescent boys after the onset of male puberty does not eliminate the performance advantage that men and adolescent boys have over women and adolescent girls in almost all athletic events. Likewise, there is no published scientific evidence that the administration of puberty blockers to males before puberty eliminates the pre-existing athletic advantage that prepubertal males have over prepubertal females in almost all athletic events.

In short summary, men, adolescent boys, and prepubertal male children perform better in almost all sports than women, adolescent girls, and prepubertal female children because of their inherent physiological advantages. In general, men, adolescent boys, and prepubertal male children, can run faster, output more muscular power, jump higher, and possess greater muscular endurance than women, adolescent girls, and prepubertal female children. These advantages become greater during and after male puberty, but they exist before puberty.

Further, while after the onset of puberty males are on average taller and heavier than females, a male performance advantage over females has been measured in weightlifting competitions even between males and females matched for body mass.

Male advantages in measurements of body composition, tests of physical fitness, and athletic performance have also been shown in children before puberty. These advantages are magnified during puberty, triggered in large part by the higher testosterone concentrations in men, and adolescent boys, after the onset of

male puberty. Under the influence of these higher testosterone levels, adolescent boys and young men develop even more muscle mass, greater muscle strength, less body fat, higher bone mineral density, greater bone strength, higher hemoglobin concentrations, larger hearts and larger coronary blood vessels, and larger overall statures than women. In addition, maximal oxygen consumption ( $VO_2\text{max}$ ), which correlates to ~30-40% of success in endurance sports, is higher in both elite and average men and boys than in comparable women and girls when measured in regard to absolute volume of oxygen consumed and when measured relative to body mass.

Although androgen deprivation (that is, testosterone suppression) may modestly decrease some physiological advantages that men and adolescent boys have over women and adolescent girls, it cannot fully or even largely eliminate those physiological advantages once an individual has passed through male puberty.

## Evidence and Conclusions

### I. The scientific reality of biological sex

1. The scientific starting point for the issues addressed in this report is the biological fact of dimorphic sex in the human species. It is now well recognized that dimorphic sex is so fundamental to human development that, as stated in a recent position paper issued by the Endocrine Society, it “must be considered in the design and analysis of human and animal research. . . . Sex is dichotomous, with sex determination in the fertilized zygote stemming from unequal expression of sex chromosomal genes.” (Bhargava et al. 2021 at 220). As stated by Sax (2002 at 177), “More than 99.98% of humans are either male or female.” All humans who do not suffer from some genetic or developmental disorder are unambiguously male or female.

2. Although sex and gender are used interchangeably in common conversation, government documents, and in the scientific literature, the American Psychological Association defines sex as “physical and biological traits” that “distinguish between males and females” whereas gender “implies the psychological, behavioral, social, and cultural aspects of being male or female (i.e., masculinity or femininity)” (<https://dictionary.apa.org>, accessed January 14, 2022). The concept that sex is an important biological factor determined at conception is a well-established scientific fact that is supported by statements from a number of respected organizations including, but not limited to, the Endocrine Society (Bhargava et al. 2021 at 220), the American Physiological Society (Shah 2014), the Institute of Medicine, and the National Institutes of Health (Miller 2014 at H781-82). Collectively, these and other organizations have stated that every cell has a sex

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

and every system in the body is influenced by sex. Indeed, “sex often influences gender, but gender cannot influence sex.” (Bhargava 2021 at 228.)

3. To further explain: “The classical biological definition of the **2 sexes** is that females have ovaries and make larger female gametes (eggs), whereas males have testes and make smaller male gametes (sperm) ... the definition can be extended to the ovaries and testes, and in this way the categories—female and male—can be applied also to individuals who have gonads but do not make gametes ... sex is dichotomous because of the different roles of each sex in reproduction.” (Bhargava 2021 at 221.) Furthermore, “sex determination begins with the inheritance of XX or XY chromosomes” (Bhargava 2021 at 221.) And, “Phenotypic sex differences develop in XX and XY embryos as soon as transcription begins. The categories of X and Y genes that are unequally represented or expressed in male and female mammalian zygotes ... cause phenotypic sex differences” (Bhargava 2021 at 222.)

4. Although disorders of sexual development (DSDs) are sometimes confused with discussions of transgender individuals, the two are different phenomena. DSDs are disorders of physical development. Many DSDs are “associated with genetic mutations that are now well known to endocrinologists and geneticists.” (Bhargava 2021 at 225) By contrast, a sense of transgender identity is usually not associated with any physical disorder, and “a clear biological causative underpinning of gender identity remains to be demonstrated.” (Bhargava 2021 at 226.)

5. Further demonstrating the biological importance of sex, Gershoni and Pietrokovski (2017) detail the results of an evaluation of “18,670 out of 19,644 informative protein-coding genes in men versus women” and reported that “there are over 6500 protein-coding genes with significant S[ex]D[ifferential] E[xpression] in at least one tissue. Most of these genes have SDE in just one tissue, but about 650 have SDE in two or more tissues, 31 have SDE in more than five tissues, and 22 have SDE in nine or more tissues” (Gershoni 2017 at 2-3.) Some examples of tissues identified by these authors that have SDE genes include breast mammary tissue, skeletal muscle, skin, thyroid gland, pituitary gland, subcutaneous adipose, lung, and heart left ventricle. Based on these observations the authors state “As expected, Y-linked genes that are normally carried only by men show SDE in many tissues” (Gershoni 2017 at 3.) As stated by Heydari et al. (2022, at 1), “Y chromosome harbors male-specific genes, which either solely or in cooperation with their X-counterpart, and independent or in conjunction with sex hormones have a considerable impact on basic physiology and disease mechanisms in most or all tissues development.”

6. In a review of 56 articles on the topic of sex-based differences in skeletal muscle, Haizlip et al., (2015) state that “More than 3,000 genes have been

identified as being differentially expressed between male and female skeletal muscle.” (Haizlip 2015 at 30.) Furthermore, the authors state that “Overall, evidence to date suggests that skeletal muscle fiber-type composition is dependent on species, anatomical location/function, and sex” (Haizlip 2015 at 30.) The differences in genetic expression between males and females influence the skeletal muscle fiber composition (i.e. fast twitch and fast twitch sub-type and slow twitch), the skeletal muscle fiber size, the muscle contractile rate, and other aspects of muscle function that influence athletic performance. As the authors review the differences in skeletal muscle between males and females they conclude, “Additionally, all of the fibers measured in men have significantly larger cross-sectional areas (CSA) compared with women.” (Haizlip 2015 at 31.) The authors also explore the effects of thyroid hormone, estrogen, and testosterone on gene expression and skeletal muscle function in males and females. One major conclusion by the authors is that “The complexity of skeletal muscle and the role of sex adding to that complexity cannot be overlooked.” (Haizlip 2015 at 37.) The evaluation of SDE in protein coding genes helps illustrate that the differences between men and women are intrinsically part of the chromosomal and genetic makeup of humans which can influence many tissues that are inherent to the athletic competitive advantages of men compared to women.

## **II. Biological men, or adolescent boys, have large, well-documented performance advantages over women and adolescent girls in almost all athletic contests.**

7. It should scarcely be necessary to invoke scientific experts to “prove” that men are on average larger, stronger, and faster than women. All of us, along with our siblings and our peers and perhaps our children, have passed through puberty, and we have watched that differentiation between the sexes occur. This is common human experience and knowledge.

8. Nevertheless, these differences have been extensively studied and measured. I cited many of these studies in the first paper on this topic that I prepared, which was submitted in litigation in January 2020. Since then, in light of current controversies, several authors have compiled valuable collections or reviews of data extensively documenting this objective fact about the human species, as manifest in almost all sports, each of which I have reviewed and found informative. These include Coleman (2020), Hilton & Lundberg (2021), World Rugby (2020), Harper (2021), Hamilton (2021), and a “Briefing Book” prepared by the Women’s Sports Policy Working Group (2021). The important paper by Handelsman et al. (2018) also gathers scientific evidence of the systematic and large male athletic advantage.

9. These papers and many others document that men, adolescent boys, and prepubertal male children, substantially outperform comparably aged women,

adolescent girls and prepubertal female children, in competitions involving running speed, swimming speed, cycling speed, jumping height, jumping distance, and strength (to name a few, but not all, of the performance differences). As I discuss later, it is now clear that these performance advantages for men, adolescent boys, and prepubertal male children, are inherent to the biological differences between the sexes.

10. In fact, I am not aware of any scientific evidence today that disproves that after puberty men possess large advantages in athletic performance over women—so large that they are generally insurmountable for comparably gifted and trained athletes at every level (i.e. (a) elite, (b) collegiate, (c) scholastic, and (d) recreational competition). And I am not aware of any scientific evidence today that disproves that these measured performance advantages are at least largely the result of physiological differences between men and women which have been measured and are reasonably well understood.

11. My use of the term “advantage” in this paper must not be read to imply any normative judgment. The adult female physique is simply different from the adult male physique. Obviously, it is optimized in important respects for the difficult task of childbearing. On average, women require far fewer calories for healthy survival. Evolutionary biologists can and do theorize about the survival value or “advantages” provided by these and other distinctive characteristics of the female physique, but I will leave that to the evolutionary biologists. I use “advantage” to refer merely to performance advantages in athletic competitions.

12. I find in the literature a widespread consensus that the large performance and physiological advantages possessed by males—rather than social considerations or considerations of identity—are precisely the *reason* that most athletic competitions are separated by sex, with women treated as a “protected class.” To cite only a few statements accepting this as the justification:

- Handelsman et al. (2018) wrote, “Virtually all elite sports are segregated into male and female competitions. The main justification is to allow women a chance to win, as women have major disadvantages against men who are, on average, taller, stronger, and faster and have greater endurance due to their larger, stronger, muscles and bones as well as a higher circulating hemoglobin level.” (803)
- Millard-Stafford et al. (2018) wrote “Current evidence suggests that women will not swim or run as fast as men in Olympic events, which speaks against eliminating sex segregation in these individual sports” (530) “Given the historical context (2% narrowing in swimming over 44 y), a reasonable assumption might be that no more than 2% of the

current performance gap could still potentially be attributed to sociocultural influences.”, (533) and “Performance gaps between US men and women stabilized within less than a decade after federal legislation provided equal opportunities for female participation, but only modestly closed the overall gap in Olympic swimming by 2% (5% in running).” (533) Dr. Millard-Stafford, a full professor at Georgia Tech, holds a Ph.D. in Exercise Physiology and is a past President of the American College of Sports Medicine.

- In 2021, Hilton et al. wrote, “most sports have a female category the purpose of which is the protection of both fairness and, in some sports, safety/welfare of athletes who do not benefit from the physiological changes induced by male levels of testosterone from puberty onwards.” (204)
- In 2020 the Swiss High Court (“Tribunal Fédéral”) observed that “in most sports . . . women and men compete in two separate categories, because the latter possess natural advantages in terms of physiology.”<sup>1</sup>
- The members of the Women’s Sports Policy Working Group wrote that “If sports were not sex-segregated, female athletes would rarely be seen in finals or on victory podiums,” and that “We have separate sex sport and eligibility criteria based on biological sex because this is the only way we can assure that female athletes have the same opportunities as male athletes not only to participate but to win in competitive sport. . . . If we did not separate athletes on the basis of biological sex—if we used any other physical criteria—we would never see females in finals or on podiums.” (WSPWG Briefing Book 2021 at 5, 20.)
- In 2020, the World Rugby organization stated that “the women's category exists to ensure protection, safety and equality for those who do not benefit from the biological advantage created by these biological performance attributes.” (World Rugby Transgender Women Guidelines 2020.)
- In 2021 Harper et al. stated “...the small decrease in strength in transwomen after 12–36 months of GAHT [Gender Affirming Hormone Therapy] suggests that transwomen likely retain a strength advantage

---

<sup>1</sup> “dans la plupart des sports . . . les femmes et les hommes concourent dans deux catégories séparées, ces derniers étant naturellement avantagés du point de vue physique.” Tribunal Fédéral decision of August 25, 2020, Case 4A\_248/2019, 4A\_398/2019, at §9.8.3.3.

over cisgender women.” (7) and “...observations in trained transgender individuals are consistent with the findings of the current review in untrained transgender individuals, whereby 30 months of GAHT may be sufficient to attenuate some, but not all, influencing factors associated with muscular endurance and performance.” (8)

- Hamilton et al. (2021), in a consensus statement for the International Federation of Sports Medicine (FIMS) concluded that “Transwomen have the right to compete in sports. However, cisgender women have the right to compete in a protected category.” (1409)

13. While the sources I mention above gather more extensive scientific evidence of this uncontroversial truth, I provide here a brief summary of representative facts concerning the male advantage in athletic performance.

#### A. Men are stronger.

14. Males exhibit greater strength throughout the body. Both Handelsman et al. (2018) and Hilton & Lundberg (2021) have gathered multiple literature references that document this fact in various muscle groups.

15. Men have in the neighborhood of 60%-100% greater **arm strength** than women. (Handelsman 2018 at 812.)<sup>2</sup> One study of elbow flexion strength (basically, bringing the fist up towards the shoulder) in a large sample of men and women found that men exhibited 109% greater isometric strength, and 89% higher strength in a single repetition. (Hilton 2021 at 204, summarizing Hubal (2005) at Table 2.)

16. **Grip strength** is often used as a useful proxy for strength more generally. In one study, men showed on average 57% greater grip strength than women. (Bohannon 2019.) A wider meta-analysis of multiple grip-strength studies not limited to athletic populations found that 18- and 19-year-old males exhibited in

---

<sup>2</sup> Handelsman expresses this as women having 50% to 60% of the “upper limb” strength of men. Handelsman cites Sale, *Neuromuscular function*, for this figure and the “lower limb” strength figure. Knox et al., *Transwomen in elite sport* (2018) are probably confusing the correct way to state percentages when they state that “differences lead to decreased trunk and lower body strength by 64% and 72% respectively, in women” (397): interpreted literally, this would imply that men have **almost 4x as much** lower body strength as do women.

the neighborhood of 2/3 greater grip strength than females. (Handelsman 2017 Figure 3, summarizing Silverman 2011 Table 1.)<sup>3</sup>

17. In an evaluation of maximal isometric handgrip strength in 1,654 healthy men, 533 healthy women aged 20-25 years and 60 “highly trained elite female athletes from sports known to require high hand-grip forces (judo, handball),” Leyk et al. (2007) observed that, “The results of female national elite athletes even indicate that the strength level attainable by extremely high training will rarely surpass the 50th percentile of untrained or not specifically trained men.” (Leyk 2007 at 415.)

18. Men have in the neighborhood of 25%-60% greater **leg strength** than women. (Handelsman 2018 at 812.) In another measure, men exhibit 54% greater knee extension torque and this male leg strength advantage is consistent across the lifespan. (Neder 1999 at 120-121.)

19. When male and female Olympic weightlifters of the same body weight are compared, the top males lift weights between 30% and 40% greater than the females of the same body weight. But when top male and female performances are compared in powerlifting, without imposing any artificial limitations on bodyweight, the male record is 65% higher than the female record. (Hilton 2021 at 203.)

20. In another measure that combines many muscle groups as well as weight and speed, moderately trained males generated 162% greater punching power than females even though men do not possess this large an advantage in any single bio-mechanical variable. (Morris 2020.) This objective reality was subjectively summed up by women’s mixed-martial arts fighter Tamikka Brents, who suffered significant facial injuries when she fought against a biological male who identified as female and fought under the name of Fallon Fox. Describing the experience, Brents said:

“I’ve fought a lot of women and have never felt the strength that I felt in a fight as I did that night. I can’t answer whether it’s because she was born a man or not because I’m not a doctor. I can only say, I’ve never felt so overpowered ever in my life, and I am an abnormally strong female in my own right.”<sup>4</sup>

## B. Men run faster.

21. Many scholars have detailed the wide performance advantages enjoyed by men in running speed. One can come at this reality from a variety of angles.

22. Multiple authors report a male speed advantage in the neighborhood of 10%-13% in a variety of events, with a variety of study populations. Handelsman et al. 2018 at 813 and Handelsman 2017 at 70 both report a male advantage of about 10% by age 17. Thibault et al. 2010 at 217 similarly reported a stable 10% performance advantage across multiple events at the Olympic level. Tønnessen et al. (2015 at 1-2) surveyed the data and found a consistent male advantage of 10%-12% in running events after the completion of puberty. They document this for both short sprints and longer distances. One group of authors found that the male advantage increased dramatically in ultra-long-distance competition (Lepers & Knechtle 2013.)

23. A great deal of current interest has been focused on track events. It is worth noting that a recent analysis of publicly available sports federation and tournament records found that men enjoy the *least* advantage in running events, as compared to a range of other events and metrics, including jumping, pole vaulting, tennis serve speed, golf drives, baseball pitching speed, and weightlifting. (Hilton 2021 at 201-202.) Nevertheless, as any serious runner will recognize, the approximately 10% male advantage in running is an overwhelming difference. Dr. Hilton calculates that “approximately 10,000 males have personal best times that are faster than the current Olympic 100m female champion.” (Hilton 2021 at 204.) Professors Doriane Coleman, Jeff Wald, Wickliffe Shreve, and Richard Clark dramatically illustrated this by compiling the data and creating the figure below (last accessed on February 10, 2022, at <https://bit.ly/35yOyS4>), which shows that the *lifetime best performances* of three female Olympic champions in the 400m event—including Team USA’s Sanya Richards-Ross and Allyson Felix—would not match the performances of “literally thousands of boys and men, including thousands who would be considered second tier in the men’s category” *just in 2017 alone*: (data were drawn from the International Association of Athletics Federations (IAAF) website which provides complete, worldwide results for individuals and events, including on an annual and an all-time basis).

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

Comparing the Best Elite Females to Boys and Men:  
Personal Bests for 3 Female Gold Medalists versus 2017 Performances by Boys and Men

24. Professor Coleman and her colleague Wicklyffe Shreve also created the table below (last accessed on February 10, 2022, at <https://bit.ly/37E1s2X>), which “compares the number of men—males over 18—competing in events reported to the International Association of Athletics Federation whose results in each event in 2017 would have ranked them above the very best elite woman that year.”

| TABLE 2 – World’s Best Woman v. Number of Men Outperforming |                     |                   |                        |
|-------------------------------------------------------------|---------------------|-------------------|------------------------|
| Event                                                       | Best Women’s Result | Best Men’s Result | # of Men Outperforming |
| 100 Meters                                                  | 10.71               | 9.69              | 2,474                  |
| 200 Meters                                                  | 21.77               | 19.77             | 2,920                  |
| 400 Meters                                                  | 49.46               | 43.62             | 4,341                  |
| 800 Meters                                                  | 1:55.16*            | 1:43.10           | 3,992+                 |
| 1500 Meters                                                 | 3:56.14             | 3:28.80           | 3,216+                 |
| 3000 Meters                                                 | 8:23.14             | 7:28.73           | 1307+                  |
| 5000 Meters                                                 | 14:18.37            | 12:55.23          | 1,243                  |
| High Jump                                                   | 2.06 meters         | 2.40 meters       | 777                    |
| Pole Vault                                                  | 4.91 meters         | 6.00 meters       | 684                    |
| Long Jump                                                   | 7.13 meters         | 8.65 meters       | 1,652                  |
| Triple Jump                                                 | 14.96 meters        | 18.11 meters      | 969                    |

25. The male advantage becomes insuperable well before the developmental changes of puberty are complete. Dr. Hilton documents that even “schoolboys”—defined as age 15 and under—have beaten the female world records in running, jumping, and throwing events. (Hilton 2021 at 204.)

26. Similarly, Coleman and Shreve created the table below (last accessed on February 10, 2022, at <https://bit.ly/37E1s2X>), which “compares the number of boys—males under the age of 18—whose results in each event in 2017 would rank them above the single very best elite [adult] woman that year.” data were drawn from the International Association of Athletics Federations (IAAF) website

| TABLE 1 – World’s Best Woman v. Under 18 Boys |                     |                   |                         |
|-----------------------------------------------|---------------------|-------------------|-------------------------|
| Event                                         | Best Women’s Result | Best Boys’ Result | # of Boys Outperforming |
| 100 Meters                                    | 10.71               | 10.15             | 124 <sup>+</sup>        |
| 200 Meters                                    | 21.77               | 20.51             | 182                     |
| 400 Meters                                    | 49.46               | 45.38             | 285                     |
| 800 Meters                                    | 1:55.16*            | 1:46.3            | 201+                    |
| 1500 Meters                                   | 3:56.14             | 3:37.43           | 101+                    |
| 3000 Meters                                   | 8:23.14             | 7:38.90           | 30                      |
| 5000 Meters                                   | 14:18.37            | 12:55.58          | 15                      |
| High Jump                                     | 2.06 meters         | 2.25 meters       | 28                      |
| Pole Vault                                    | 4.91 meters         | 5.31 meters       | 10                      |
| Long Jump                                     | 7.13 meters         | 7.88 meters       | 74                      |
| Triple Jump                                   | 14.96 meters        | 17.30 meters      | 47                      |

27. In an analysis I have performed of running events (consisting of the 100 m, 200 m, 400 m, 800 m, 1500 m, 5000 m, and 10000 m) in the Division 1, Division 2, and Division 3 NCAA Outdoor track championships for the years of 2010-2019, the average performance across all events of the 1<sup>st</sup> place man was 14.1% faster than the 1<sup>st</sup> place woman, with the smallest difference being a 10.2% advantage for men in the Division 1 100 m race. The average 8<sup>th</sup> place man across all events (the last place to earn the title of All American) was 11.2% faster than 1<sup>st</sup> place woman, with the smallest difference being a 6.5% advantage for men in the Division 1 100 m race. (Brown et al. Unpublished observations, to be presented at the 2022 Annual Meeting of the American College of Sports Medicine.)

28. Athletic.net® is an internet-based resource providing “results, team, and event management tools to help coaches and athletes thrive.” Among the resources available on Athletic.net are event records that can be searched by nationally or by state age group, school grade, and state. Higerd (2021) in an evaluation of high school track running performance records from five states (CA, FL, MN, NY, WA), over three years (2017 – 2019) observed that males were 14.38% faster than females in the 100M (at 99), 16.17% faster in the 200M (at 100), 17.62% faster in the 400M (at 102), 17.96% faster in the 800M (at 103), 17.81% faster in the 1600M (at 105), and 16.83% faster in the 3200M (at 106).

### **C. Men jump higher and farther.**

29. Jumping involves both leg strength and speed as positive factors, with body weight of course a factor working against jump height. Despite their substantially greater body weight, males enjoy an even greater advantage in jumping than in running. Handelsman 2018 at 813, looking at youth and young adults, and Thibault 2010 at 217, looking at Olympic performances, both found male advantages in the range of 15%-20%. See also Tønnessen 2015 (approximately 19%); Handelsman 2017 (19%); Hilton 2021 at 201 (18%). Looking at the vertical jump called for in volleyball, research on elite volleyball players found that males jumped on average 50% higher during an “attack” at the net than did females. (Sattler 2015; see also Hilton 2021 at 203 (33% higher vertical jump).)

30. Higerd (2021) in an evaluation of high school high jump performance available through the track and field database athletic.net®, which included five states (CA, FL, MN, NY, WA), over three years (2017 – 2019) (at 82) observed that in 23,390 females and 26,843 males, females jumped an average of 1.35 m and males jumped an average of 1.62 m, for an 18.18% performance advantage for males (at 96). In an evaluation of long jump performance in 45,705 high school females and 54,506 high school males the females jumped an average of 4.08 m and males jumped an average of 5.20 m, for a 24.14% performance advantage for males (at 97).

31. The combined male advantage of body height and jump height means, for example, that a total of seven women in the WNBA have ever dunked a basketball in the regulation 10 foot hoop,<sup>5</sup> while the ability to dunk appears to be almost universal among NBA players: “Since the 1996–97 season (the earliest data is available from Basketball-Reference.com), 1,801 different [NBA] players have combined for 210,842 regular-season dunks, and 1,259 out of 1,367 players (or 92%) who have played at least 1,000 minutes have dunked at least once.”<sup>6</sup>

#### **D. Men throw, hit, and kick faster and farther.**

32. Strength, arm-length, and speed combine to give men a large advantage over women in throwing. This has been measured in a number of studies.

33. One study of elite male and female baseball pitchers showed that men throw baseballs 35% faster than women—81 miles/hour for men vs. 60 miles/hour for women. (Chu 2009.) By age 12, “boys’ throwing velocity is already between 3.5 and 4 standard deviation units higher than the girls’.” (Thomas 1985 at 276.) By age seventeen, the *average* male can throw a ball farther than 99% of seventeen-year-old females. (Lombardo 2018; Chu 2009; Thomas 1985 at 268.) Looking at publicly available data, Hilton & Lundberg found that in both baseball pitching and the field hockey “drag flick,” the *record* ball speeds achieved by males are more than 50% higher than those achieved by females. (Hilton 2021 at 202-203.)

34. Men achieve serve speeds in tennis more that 15% faster than women; and likewise in golf achieve ball speeds off the tee more than 15% faster than women. (Hilton 2021 at 202.)

35. Males are able to throw a javelin more than 30% farther than females. (Lombardo 2018 Table 2; Hilton 2021 at 203.)

36. Men serve and spike volleyballs with higher velocity than women, with a performance advantage in the range of 29-34%. (Hilton 2021 at 204 Fig. 1.)

37. Men are also able to kick balls harder and faster. A study comparing collegiate soccer players found that males kick the ball with an average 20% greater velocity than females. (Sakamoto 2014.)

---

<sup>5</sup> [https://www.espn.com/wnba/story/\\_/id/32258450/2021-wnba-playoffs-brittney-griner-owns-wnba-dunking-record-coming-more](https://www.espn.com/wnba/story/_/id/32258450/2021-wnba-playoffs-brittney-griner-owns-wnba-dunking-record-coming-more).

<sup>6</sup> <https://www.si.com/nba/2021/02/22/nba-non-dunkers-patty-mills-tj-mcconnell-steve-novak-daily-cover>

### **E. Males exhibit faster reaction times.**

38. Interestingly, men enjoy an additional advantage over women in reaction time—an attribute not obviously related to strength or metabolism (e.g.  $\text{VO}_2\text{max}$ ). “Reaction time in sports is crucial in both simple situations such as the gun shot in sprinting and complex situations when a choice is required. In many team sports this is the foundation for tactical advantages which may eventually determine the outcome of a game.” (Dogan 2009 at 92.) “Reaction times can be an important determinant of success in the 100m sprint, where medals are often decided by hundredths or even thousandths of a second.” (Tønnessen 2013 at 885.)

39. The existence of a sex-linked difference in reaction times is consistent over a wide range of ages and athletic abilities. (Dykiert 2012.) Even by the age of 4 or 5, in a ruler-drop test, males have been shown to exhibit 4% to 6% faster reaction times than females. (Latorre-Roman 2018.) In high school athletes taking a common baseline “ImPACT” test, males showed 3% faster reaction times than females. (Mormile 2018.) Researchers have found a 6% male advantage in reaction times of both first-year medical students (Jain 2015) and world-class sprinters (Tønnessen 2013).

40. Most studies of reaction times use computerized tests which ask participants to hit a button on a keyboard or to say something in response to a stimulus. One study on NCAA athletes measured “reaction time” by a criterion perhaps more closely related to athletic performance—that is, how fast athletes covered 3.3 meters after a starting signal. Males covered the 3.3 meters 10% faster than females in response to a visual stimulus, and 16% faster than females in response to an auditory stimulus. (Spierer 2010.)

41. Researchers have speculated that sex-linked differences in brain structure, as well as estrogen receptors in the brain, may be the source of the observed male advantage in reaction times, but at present this remains a matter of speculation and hypothesis. (Mormile at 19; Spierer at 962.)

### **III. Men have large measured physiological differences compared to women which demonstrably or likely explain their performance advantages.**

42. No single physiological characteristic alone accounts for all or any one of the measured advantages that men enjoy in athletic performance. However, scientists have identified and measured a number of physiological factors that contribute to superior male performance.

### **A. Men are taller and heavier than women**

43. In some sports, such as basketball and volleyball, height itself provides competitive advantage. While some women are taller than some men, based on data from 20 countries in North America, Europe, East Asia, and Australia, the 50<sup>th</sup> percentile for body height for women is 164.7 cm (5 ft 5 inches) and the 50<sup>th</sup> percentile for body height for men is 178.4 cm (5 ft 10 inches). Helping to illustrate the inherent height difference between men and women, from the same data analysis, the 95<sup>th</sup> percentile for body height for women is 178.9 cm (5 feet 10.43 inches), which is only 0.5 cm taller than the 50<sup>th</sup> percentile for men (178.4 cm; 5 feet 10.24 inches), while the 95<sup>th</sup> percentile for body height for men is 193.6 cm (6 feet 4.22 inches). (Roser 2013.)

44. To look at a specific athletic population, an evaluation of NCAA Division 1 basketball players compared 68 male guards and 59 male forwards to 105 female guards and 91 female forwards, and found that on average the male guards were  $187.4 \pm 7.0$  cm tall and weighed  $85.2 \pm 7.4$  kg while the female guards were  $171.6 \pm 5.0$  cm tall and weighed  $68.0 \pm 7.4$  kg. The male forwards were  $201.7 \pm 4.0$  cm tall and weighed  $105.3 \pm 5.9$  kg while the female forwards were  $183.5 \pm 4.4$  cm tall and weighed  $82.2 \pm 12.5$  kg. (Fields 2018 at 3.)

### **B. Males have larger and longer bones, stronger bones, and different bone configuration.**

45. Obviously, males on average have longer bones. “Sex differences in height have been the most thoroughly investigated measure of bone size, as adult height is a stable, easily quantified measure in large population samples. Extensive twin studies show that adult height is highly heritable with predominantly additive genetic effects that diverge in a sex-specific manner from the age of puberty onwards.” (Handelsman 2018 at 818.) “Pubertal testosterone exposure leads to an ultimate average greater height in men of 12–15 centimeters, larger bones, greater muscle mass, increased strength and higher hemoglobin levels.” (Gooren 2011 at 653.)

46. “Men have distinctively greater bone size, strength, and density than do women of the same age. As with muscle, sex differences in bone are absent prior to puberty but then accrue progressively from the onset of male puberty due to the sex difference in exposure to adult male circulating testosterone concentrations.” (Handelsman 2018 at 818.)

47. “[O]n average men are 7% to 8% taller with longer, denser, and stronger bones, whereas women have shorter humerus and femur cross-sectional

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

areas being 65% to 75% and 85%, respectively, those of men.” (Handelsman 2018 at 818.)

48. Greater height, leg, and arm length themselves provide obvious advantages in several sports. But male bone geometry also provides less obvious advantages. “The major effects of men’s larger and stronger bones would be manifest via their taller stature as well as the larger fulcrum with greater leverage for muscular limb power exerted in jumping, throwing, or other explosive power activities.” (Handelsman 2018 at 818.)

49. Male advantage in bone size is not limited to length, as larger bones provide the mechanical framework for larger muscle mass. “From puberty onwards, men have, on average, 10% more bone providing more surface area. The larger surface area of bone accommodates more skeletal muscle so, for example, men have broader shoulders allowing more muscle to build. This translates into 44% less upper body strength for women, providing men an advantage for sports like boxing, weightlifting and skiing. In similar fashion, muscle mass differences lead to decreased trunk and lower body strength by 64% and 72%, respectively in women. These differences in body strength can have a significant impact on athletic performance, and largely underwrite the significant differences in world record times and distances set by men and women.” (Knox 2019 at 397.)

50. Meanwhile, distinctive aspects of the female pelvis geometry cut against athletic performance. “[T]he widening of the female pelvis during puberty, balancing the evolutionary demands of obstetrics and locomotion, retards the improvement in female physical performance.” (Handelsman 2018 at 818.) “[T]he major female hormones, oestrogens, can have effects that disadvantage female athletic performance. For example, women have a wider pelvis changing the hip structure significantly between the sexes. Pelvis shape is established during puberty and is driven by oestrogen. The different angles resulting from the female pelvis leads to decreased joint rotation and muscle recruitment ultimately making them slower.” (Knox 2019 at 397.)

51. There are even sex-based differences in foot size and shape. Wunderlich & Cavanaugh (2001) observed that a “foot length of 257 mm represents a value that is ... approximately the 20th percentile men’s foot lengths and the 80th percentile women’s foot lengths.” (607) and “For a man and a woman, both with statures of 170 cm (5 feet 7 inches), the man would have a foot that was approximately 5 mm longer and 2 mm wider than the woman.” (608). Based on these, and other analyses, they conclude that “female feet and legs are not simply scaled-down versions of male feet but rather differ in a number of shape characteristics, particularly at the arch, the lateral side of the foot, the first toe, and the ball of the foot.” (605) Further, Fessler et al. (2005) observed that “female foot length is consistently smaller than male foot length” (44) and concludes that

“proportionate foot length is smaller in women” (51) with an overall conclusion that “Our analyses of genetically disparate populations reveal a clear pattern of sexual dimorphism, with women consistently having smaller feet proportionate to stature than men.” (53)

52. Beyond simple performance, the greater density and strength of male bones provide higher protection against stresses associated with extreme physical effort: “[S]tress fractures in athletes, mostly involving the legs, are more frequent in females, with the male protection attributable to their larger and thicker bones.” (Handelsman 2018 at 818.)

### **C. Males have much larger muscle mass.**

53. The fact that, on average, men have substantially larger muscles than women is as well known to common observation as men’s greater height. But the male advantage in muscle size has also been extensively measured. The differential is large.

54. “On average, women have 50% to 60% of men’s upper arm muscle cross-sectional area and 65% to 70% of men’s thigh muscle cross-sectional area, and women have 50% to 60% of men’s upper limb strength and 60% to 80% of men’s leg strength. Young men have on average a skeletal muscle mass of >12 kg greater than age-matched women at any given body weight.” (Handelsman 2018 at 812. See also Gooren 2011 at 653, Thibault 2010 at 214.)

55. “There is convincing evidence that the sex differences in muscle mass and strength are sufficient to account for the increased strength and aerobic performance of men compared with women and is in keeping with the differences in world records between the sexes.” (Handelsman 2018 at 816.)

56. Once again, looking at specific and comparable populations of athletes, an evaluation of NCAA Division 1 basketball players consisting of 68 male guards and 59 male forwards, compared to 105 female guards and 91 female forwards, reported that on average the male guards had  $77.7 \pm 6.4$  kg of fat free mass and  $7.4 \pm 3.1$  kg fat mass while the female guards had  $54.6 \pm 4.4$  kg fat free mass and  $13.4 \pm 5.4$  kg fat mass. The male forwards had  $89.5 \pm 5.9$  kg fat free mass and  $15.9 \pm 5.6$  kg fat mass while the female forwards had  $61.8 \pm 5.9$  kg fat free mass and  $20.5 \pm 7.7$  kg fat mass. (Fields 2018 at 3.)

### **D. Females have a larger proportion of body fat.**

57. While women have smaller muscles, they have proportionately more body fat, in general a negative for athletic performance. “Oestrogens also affect body

composition by influencing fat deposition. Women, on average, have higher percentage body fat, and this holds true even for highly trained healthy athletes (men 5%–10%, women 8%–15%). Fat is needed in women for normal reproduction and fertility, but it is not performance-enhancing. This means men with higher muscle mass and less body fat will normally be stronger kilogram for kilogram than women.” (Knox 2019 at 397.)

58. “[E]lite females have more (<13 vs. <5 %) body fat than males. Indeed, much of the difference in [maximal oxygen uptake] between males and females disappears when it is expressed relative to lean body mass. . . . Males possess on average 7–9 % less percent body fat than females.” (Lepers 2013 at 853.)

59. Knox et al. observe that both female pelvis shape and female body fat levels “disadvantage female athletes in sports in which speed, strength and recovery are important,” (Knox 2019 at 397), while Tønnessen et al. describe the “ratio between muscular power and total body mass” as “critical” for athletic performance. (Tønnessen 2015 at 7.)

**E. Males are able to metabolize and release energy to muscles at a higher rate due to larger heart and lung size, and higher hemoglobin concentrations.**

60. While advantages in bone size, muscle size, and body fat are easily perceived and understood by laymen, scientists also measure and explain the male athletic advantage at a more abstract level through measurements of metabolism, or the ability to deliver energy to muscles throughout the body.

61. Energy release at the muscles depends centrally on the body’s ability to deliver oxygen to the muscles, where it is essential to the complex chain of biochemical reactions that make energy available to power muscle fibers. Men have multiple distinctive physiological attributes that together give them a large advantage in oxygen delivery.

62. Oxygen is taken into the blood in the lungs. Men have greater capability to take in oxygen for multiple reasons. “[L]ung capacity [is] larger in men because of a lower diaphragm placement due to Y-chromosome genetic determinants.” (Knox 2019 at 397.) Supporting larger lung capacity, men have “greater cross-sectional area of the trachea”; that is, they can simply move more air in and out of their lungs in a given time. (Hilton 2021 at 201.)

63. More, male lungs provide superior oxygen exchange even for a given volume: “The greater lung volume is complemented by testosterone-driven **enhanced alveolar multiplication** rate during the early years of life. Oxygen exchange takes place between the air we breathe and the bloodstream at the alveoli,

so more alveoli allows more oxygen to pass into the bloodstream. Therefore, the greater lung capacity allows more air to be inhaled with each breath. This is coupled with an improved uptake system allowing men to absorb more oxygen.” (Knox 2019 at 397.)

64. “Once in the blood, oxygen is carried by haemoglobin. **Haemoglobin concentrations** are directly modulated by testosterone so men have higher levels and can carry more oxygen than women.” (Knox 2019 at 397.) “It is well known that levels of circulating hemoglobin are androgen-dependent and consequently higher in men than in women by 12% on average.... Increasing the amount of hemoglobin in the blood has the biological effect of increasing oxygen transport from lungs to tissues, where the increased availability of oxygen enhances aerobic energy expenditure.” (Handelsman 2018 at 816.) (See also Lepers 2013 at 853; Handelsman 2017 at 71.) “It may be estimated that as a result the average maximal oxygen transfer will be ~10% greater in men than in women, which has a direct impact on their respective athletic capacities.” (Handelsman 2018 at 816.)

65. But the male metabolic advantage is further multiplied by the fact that men are also able to **circulate more blood per second** than are women. “Oxygenated blood is pumped to the active skeletal muscle by the heart. The left ventricle chamber of the heart is the reservoir from which blood is pumped to the body. The larger the left ventricle, the more blood it can hold, and therefore, the more blood can be pumped to the body with each heartbeat, a physiological parameter called ‘stroke volume’. The female heart size is, on average, 85% that of a male resulting in the stroke volume of women being around 33% less.” (Knox 2018 at 397.) Hilton cites different studies that make the same finding, reporting that men on average can pump 30% more blood through their circulatory system per minute (“cardiac output”) than can women. (Hilton 2021 at 202.)

66. Finally, at the cell where the energy release is needed, men appear to have yet another advantage. “Additionally, there is experimental evidence that testosterone increases . . . **mitochondrial biogenesis**, myoglobin expression, and IGF-1 content, which may augment energetic and power generation of skeletal muscular activity.” (Handelsman 2018 at 811.)

67. “Putting all of this together, men have a much more efficient cardiovascular and respiratory system.” (Knox 2019 at 397.) A widely accepted measurement that reflects the combined effects of all these respiratory, cardiovascular, and metabolic advantages is referred to as “ $\dot{V}O_{2max}$ ,” which refers to the maximum rate at which an individual can consume oxygen during aerobic

exercise.<sup>7</sup> Looking at 11 separate studies, including both trained and untrained individuals, Pate et al. concluded that men have a 50% higher  $\text{VO}_2\text{max}$  than women on average, and a 25% higher  $\text{VO}_2\text{max}$  in relation to body weight. (Pate 1984 at 92. See also Hilton 2021 at 202.)

#### IV. The role of testosterone in the development of male advantages in athletic performance.

68. The following tables of reference ranges for circulating testosterone in males and females are presented to help provide context for some of the subsequent information regarding athletic performance and physical fitness in children, youth, and adults, and regarding testosterone suppression in transwomen and athletic regulations. These data were obtained from the Mayo Clinic Laboratories (available at <https://www.mayocliniclabs.com/test-catalog/overview/83686#Clinical-and-Interpretive>, accessed January 14, 2022).

Reference ranges for serum testosterone concentrations in males and females.

| Age                | Males              | Females          |
|--------------------|--------------------|------------------|
| 0 – 5 months       | 2.6 – 13.9 nmol/l  | 0.7 – 2.8 nmol/l |
| 6 months – 9 years | 0.2 – 0.7 nmol/l   | 0.2 – 0.7 nmol/l |
| 10 – 11 years      | 0.2 – 4.5 nmol/l   | 0.2 – 1.5 nmol/l |
| 12 -13 years       | 0.2 – 27.7 nmol/l  | 0.2 – 2.6 nmol/l |
| 14 years           | 0.2 – 41.6 nmol/l  | 0.2 – 2.6 nmol/l |
| 15 – 16 years      | 3.5 – 41.6 nmol/l  | 0.2 – 2.6 nmol/l |
| 17 – 18 years      | 10.4 – 41.6 nmol/l | 0.7 – 2.6 nmol/l |
| 19 years and older | 8.3 – 32.9 nmol/l  | 0.3 – 2.1 nmol/l |

Please note that testosterone concentrations are sometimes expressed in units of ng/dl, and 1 nmol/l = 28.85 ng/dl.

69. Tanner Stages can be used to help evaluate the onset and progression of puberty and may be more helpful in evaluating normal testosterone concentrations than age in adolescents. “Puberty onset (transition from Tanner stage I to Tanner stage II) occurs for boys at a median age of 11.5 years and for girls

---

<sup>7</sup>  $\text{VO}_2\text{max}$  is “based on hemoglobin concentration, total blood volume, maximal stroke volume, cardiac size/mass/compliance, skeletal muscle blood flow, capillary density, and mitochondrial content.” International Statement, *The Role of Testosterone in Athletic Performance* (January 2019), available at [https://law.duke.edu/sites/default/files/centers/sportslaw/Experts\\_T\\_Statement\\_2019.pdf](https://law.duke.edu/sites/default/files/centers/sportslaw/Experts_T_Statement_2019.pdf).

at a median age of 10.5 years. . . . Progression through Tanner stages is variable. Tanner stage V (young adult) should be reached by age 18.”

(<https://www.mayocliniclabs.com/test-catalog/overview/83686#Clinical-and-Interpretive>, accessed January 14, 2022).

Reference Ranges for serum testosterone concentrations by Tanner stage

| <b>Tanner Stage</b> | <b>Males</b>       | <b>Females</b>   |
|---------------------|--------------------|------------------|
| I (prepubertal)     | 0.2 – 0.7 nmol/l   | 0.7 – 0.7 nmol/l |
| II                  | 0.3 – 2.3 nmol/l   | 0.2 – 1.6 nmol/l |
| III                 | 0.9 – 27.7 nmol/l  | 0.6 – 2.6 nmol/l |
| IV                  | 2.9 – 41.6 nmol/l  | 0.7 – 2.6 nmol/l |
| V (young adult)     | 10.4 – 32.9 nmol/l | 0.4 – 2.1 nmol/l |

70. Senefeld et al. (2020 at 99) state that “Data on testosterone levels in children and adolescents segregated by sex are scarce and based on convenience samples or assays with limited sensitivity and accuracy.” They therefore “analyzed the timing of the onset and magnitude of the divergence in testosterone in youths aged 6 to 20 years by sex using a highly accurate assay” (isotope dilution liquid chromatography tandem mass spectrometry). Senefeld observed a significant difference beginning at age 11, which is to say about fifth grade.

Serum testosterone concentrations (nmol/L) in youths aged 6 to 20 years measured using isotope dilution liquid chromatography tandem mass spectrometry (Senefeld et al. ,2020, at 99)

| Age (y) | Boys |      |      | Girls |      |      |
|---------|------|------|------|-------|------|------|
|         | 5th  | 50th | 95th | 5th   | 50th | 95th |
| 6       | 0.0  | 0.1  | 0.2  | 0.0   | 0.1  | 0.2  |
| 7       | 0.0  | 0.1  | 0.2  | 0.0   | 0.1  | 0.3  |
| 8       | 0.0  | 0.1  | 0.3  | 0.0   | 0.1  | 0.3  |
| 9       | 0.0  | 0.1  | 0.3  | 0.1   | 0.2  | 0.6  |
| 10      | 0.1  | 0.2  | 2.6  | 0.1   | 0.3  | 0.9  |
| 11      | 0.1  | 0.5  | 11.3 | 0.2   | 0.5  | 1.3  |
| 12      | 0.3  | 3.6  | 17.2 | 0.2   | 0.7  | 1.4  |
| 13      | 0.6  | 9.2  | 21.5 | 0.3   | 0.8  | 1.5  |
| 14      | 2.2  | 11.9 | 24.2 | 0.3   | 0.8  | 1.6  |
| 15      | 4.9  | 13.2 | 25.8 | 0.4   | 0.8  | 1.8  |
| 16      | 5.2  | 14.9 | 24.1 | 0.4   | 0.9  | 2.0  |
| 17      | 7.6  | 15.4 | 27.0 | 0.5   | 1.0  | 2.0  |
| 18      | 9.2  | 16.3 | 25.5 | 0.4   | 0.9  | 2.1  |
| 19      | 8.1  | 17.2 | 27.9 | 0.4   | 0.9  | 2.3  |
| 20      | 6.5  | 17.9 | 29.9 | 0.4   | 1.0  | 3.4  |

### **A. Boys exhibit advantages in athletic performance even before puberty.**

71. It is often said or assumed that boys enjoy no significant athletic advantage over girls before puberty. However, this is not true. Writing in their seminal work on the physiology of elite young female athletes, McManus and Armstrong (2011) reviewed the differences between boys and girls regarding bone density, body composition, cardiovascular function, metabolic function, and other physiologic factors that can influence athletic performance. They stated, “At birth, boys tend to have a greater lean mass than girls. This difference remains small but detectable throughout childhood with about a 10% greater lean mass in boys than girls prior to puberty.” (28) “Sexual dimorphism underlies much of the physiologic response to exercise,” and most importantly these authors concluded that, “Young girl athletes are not simply smaller, less muscular boys.” (23)

72. Certainly, boys’ physiological and performance advantages increase rapidly from the beginning of puberty until around age 17-19. But much data and multiple studies show that significant physiological differences, and significant male athletic performance advantages in certain areas, exist before significant developmental changes associated with male puberty have occurred.

73. Starting at birth, girls have more body fat and less fat-free mass than boys. Davis et al. (2019) in an evaluation of 602 infants reported that at birth and age 5 months, infant boys have larger total body mass, body length, and fat-free mass while having lower percent body fat than infant girls. In an evaluation of 20 boys and 20 girls ages 3-8 years old, matched for age, height, and body weight Taylor et al. (Taylor 1997) reported that the “boys had significantly less fat, a lower % body fat and a higher bone-free lean tissue mass than the girls” when “expressed as a percentage of the average fat mass of the boys”, the girls’ fat mass was 52% higher than the boys “...while the bone-free lean tissue mass was 9% lower” (at 1083.) In an evaluation of 376 prepubertal [Tanner Stage 1] boys and girls, Taylor et al. (2010) observed that the boys had 21.6% more lean mass, and 13% less body fat (when expressed as percent of total body mass) than did the girls. In a review of 22 peer reviewed publications on the topic, Staiano and Katzmarzyk (2012) conclude that “... girls have more T[otal]B[ody]F[at] than boys throughout childhood and adolescence. (at 4.)

74. In the seminal textbook, *Growth, Maturation, and Physical Activity*, Malina et al. (2004) present a summary of data from Gauthier et al. (1983) which present data from “a national sample of Canadian children and youth” demonstrating that from ages 7 to 17, boys have a higher aerobic power output than do girls of the same ages when exercise intensity is measured using heart rate

(Malina at 242.) That is to say, that at a heart rate of 130 beats per minute, or 150, or 170, a 7 to 17 year old boy should be able to run, bike, or swim faster than a similarly aged girl.

75. Considerable data from school-based fitness testing exists showing that prepubertal boys outperform comparably aged girls in tests of muscular strength, muscular endurance, and running speed. These sex-based differences in physical fitness are relevant to the current issue of sex-based sports categories because, as stated by Lesinski et al. (2020), in an evaluation “of 703 male and female elite young athletes aged 8–18” (1) “fitness development precedes sports specialization” (2) and further observed that “males outperformed females in C[ounter]M[ovement]J[ump], D[rop]J[ump], C[hange]o[f]D[irection speed] performances and hand grip strength.” (5).

76. Tambalis et al. (2016) states that “based on a large data set comprising 424,328 test performances” (736) using standing long jump to measure lower body explosive power, sit and reach to measure flexibility, timed 30 second sit ups to measure abdominal and hip flexor muscle endurance, 10 x 5 meter shuttle run to evaluate speed and agility, and multi-stage 20 meter shuttle run test to estimate aerobic performance (738). “For each of the fitness tests, performance was better in boys compared with girls ( $p < 0.001$ ), except for the S[it and] R[each] test ( $p < 0.001$ ).” (739) In order to illustrate that the findings of Tambalis (2016) are not unique to children in Greece, the authors state “Our findings are in accordance with recent studies from Latvia [ ] Portugal [ ] and Australia [Catley & Tomkinson (2013)].” (744).

77. The 20-m multistage fitness test is a commonly used maximal running aerobic fitness test used in the Eurofit Physical Fitness Test Battery and the FitnessGram Physical Fitness test. It is also known as the 20-meter shuttle run test, PACER test, or beep test (among other names; this is not the same test as the shuttle run in the Presidential Fitness Test). This test involves continuous running between two lines 20 meters apart in time to recorded beeps. The participants stand behind one of the lines facing the second line and begin running when instructed by the recording. The speed at the start is quite slow. The subject continues running between the two lines, turning when signaled by the recorded beeps. After about one minute, a sound indicates an increase in speed, and the beeps will be closer together. This continues each minute (level). If the line is reached before the beep sounds, the subject must wait until the beep sounds before continuing. If the line is not reached before the beep sounds, the subject is given a warning and must continue to run to the line, then turn and try to catch up with the pace within two more 'beeps'. The subject is given a warning the first time they fail to reach the line (within 2 meters) and eliminated after the second warning.

78. To illustrate the sex-based performance differences observed by Tambalis, I have prepared the following table showing the number of laps completed in the 20 m shuttle run for children ages 6-18 years for the low, middle, and top decile (Tambalis 2016 at 740 & 742), and have calculated the percent difference between the boys and girls using the same equation as Millard-Stafford (2018).

Performance difference between boys and girls ÷ Girls performance

**Number of laps completed in the 20m shuttle run for children ages 6-18 years**

| Age | Male      |           |           | Female    |           |           | Male-Female % Difference |           |           |
|-----|-----------|-----------|-----------|-----------|-----------|-----------|--------------------------|-----------|-----------|

| 18  | 13        | 48        | 87        | 8.0       | 23.0      | 39.5      | 62.5%                    | 108.7%    | 120.3%    |

79. The Presidential Fitness Test was widely used in schools in the United States from the late 1950s until 2013 (when it was phased out in favor of the Presidential Youth Fitness Program and FitnessGram, both of which focus on health-related physical fitness and do not present data in percentiles). Students participating in the Presidential Fitness Test could receive “The National Physical Fitness Award” for performance equal to the 50<sup>th</sup> percentile in five areas of the fitness test, “while performance equal to the 85<sup>th</sup> percentile could receive the Presidential Physical Fitness Award.” Tables presenting the 50<sup>th</sup> and 85<sup>th</sup> percentiles for the Presidential Fitness Test for males and females ages 6 – 17, and differences in performance between males and females, for curl-ups, shuttle run, 1 mile run, push-ups, and pull-ups appear in the Appendix.

80. For both the 50<sup>th</sup> percentile (The National Physical Fitness Award) and the 85<sup>th</sup> percentile (Presidential Physical Fitness Award), with the exception of curl-ups in 6-year-old children, boys outperform girls. The difference in pull-ups for the 85<sup>th</sup> percentile for ages 7 through 17 are particularly informative with boys

outperforming girls by 100% – 1200%, highlighting the advantages in upper body strength in males.

81. A very recent literature review commissioned by the five United Kingdom governmental Sport Councils concluded that while “[i]t is often assumed that children have similar physical capacity regardless of their sex, . . . large-scale data reports on children from the age of six show that young males have significant advantage in cardiovascular endurance, muscular strength, muscular endurance, speed/agility and power tests,” although they “score lower on flexibility tests.” (UK Sports Councils’ Literature Review 2021 at 3.)

82. Hilton et al., also writing in 2021, reached the same conclusion: “An extensive review of fitness data from over 85,000 Australian children aged 9–17 years old showed that, compared with 9-year-old females, 9-year-old males were faster over short sprints (9.8%) and 1 mile (16.6%), could jump 9.5% further from a standing start (a test of explosive power), could complete 33% more push-ups in 30 [seconds] and had 13.8% stronger grip.” (Hilton 2021 at 201, summarizing the findings of Catley & Tomkinson 2013.)

83. The following data are taken from Catley & Tomkinson (2013 at 101) showing the low, middle, and top decile for 1.6 km run (1.0 mile) run time for 11,423 girls and boys ages 9-17.

**1.6 km run (1.0 mile) run time for 11,423 girls and boys ages 9-17**

| Age | Male      |           |           | Female    |           |           | Male-Female % Difference |           |           |
|-----|-----------|-----------|-----------|-----------|-----------|-----------|--------------------------|-----------|-----------|
|     | 10th %ile | 50th %ile | 90th %ile | 10th %ile | 50th %ile | 90th %ile | 10th %ile                | 50th %ile | 90th %ile |

| 15  | 531       | 432       | 373       | 710.0     | 570.0     | 469.0     | 25.2%                    | 24.2%     | 20.5%     |
| 16  | 514       | 423       | 366       | 710.0     | 573.0     | 471.0     | 27.6%                    | 26.2%     | 22.3%     |
| 17  | 500       | 417       | 362       | 708.0     | 575.0     | 471.0     | 29.4%                    | 27.5%     | 23.1%     |

84. Tomkinson et al. (2018) performed a similarly extensive analysis of literally millions of measurements of a variety of strength and agility metrics from the “Eurofit” test battery on children from 30 European countries. They provide detailed results for each metric, broken out by decile. Sampling the low, middle, and top decile, 9-year-old boys performed better than 9-year-old girls by between 6.5%

and 9.7% in the standing broad jump; from 11.4% to 16.1% better in handgrip; and from 45.5% to 49.7% better in the “bent-arm hang.” (Tomkinson 2018.)

85. The Bent Arm Hang test is a measure of upper body muscular strength and endurance used in the Eurofit Physical Fitness Test Battery. To perform the Bent Arm Hang, the child is assisted into position with the body lifted to a height so that the chin is level with the horizontal bar (like a pull up bar). The bar is grasped with the palms facing away from body and the hands shoulder width apart. The timing starts when the child is released. The child then attempts to hold this position for as long as possible. Timing stops when the child's chin falls below the level of the bar, or the head is tilted backward to enable the chin to stay level with the bar.

86. Using data from Tomkinson (2018; table 7 at 1452), the following table sampling the low, middle, and top decile for bent arm hang for 9- to 17-year-old children can be constructed:

**Bent Arm Hang time (in seconds) for children ages 9 - 17 years**

| Age | Male      |           |           | Female    |           |           | Male-Female % Difference |           |           |
|-----|-----------|-----------|-----------|-----------|-----------|-----------|--------------------------|-----------|-----------|
|     | 10th %ile | 50th %ile | 90th %ile | 10th %ile | 50th %ile | 90th %ile | 10th %ile                | 50th %ile | 90th %ile |
| 9   | 2.13      | 7.48      | 25.36     | 1.43      | 5.14      | 16.94     | 48.95%                   | 45.53%    | 49.70%    |
| 10  | 2.25      | 7.92      | 26.62     | 1.42      | 5.15      | 17.06     | 58.45%                   | 53.79%    | 56.04%    |
| 11  | 2.35      | 8.32      | 27.73     | 1.42      | 5.16      | 17.18     | 65.49%                   | 61.24%    | 61.41%    |
| 12  | 2.48      | 8.79      | 28.99     | 1.41      | 5.17      | 17.22     | 75.89%                   | 70.02%    | 68.35%    |
| 13  | 2.77      | 9.81      | 31.57     | 1.41      | 5.18      | 17.33     | 96.45%                   | 89.38%    | 82.17%    |
| 14  | 3.67      | 12.70     | 38.39     | 1.40      | 5.23      | 17.83     | 162.14%                  | 142.83%   | 115.31%   |
| 15  | 5.40      | 17.43     | 47.44     | 1.38      | 5.35      | 18.80     | 291.30%                  | 225.79%   | 152.34%   |
| 16  | 7.39      | 21.75     | 53.13     | 1.38      | 5.63      | 20.57     | 435.51%                  | 286.32%   | 158.29%   |
| 17  | 9.03      | 24.46     | 54.66     | 1.43      | 6.16      | 23.61     | 531.47%                  | 297.08%   | 131.51%   |

87. Evaluating these data, a 9-year-old boy in the 50th percentile (that is to say a 9-year-old boy of average upper body muscular strength and endurance) will perform better in the bent arm hang test than 9 through 17-year-old girls in the 50th percentile. Similarly, a 9-year-old boy in the 90th percentile will perform better in the bent arm hang test than 9 through 17-year-old girls in the 90th percentile.

88. Using data from Tomkinson et al. (2017; table 1 at 1549), the following table sampling the low, middle, and top decile for running speed in the last stage of the 20 m shuttle run for 9- to 17-year-old children can be constructed.

**20 m shuttle Running speed (km/h at the last completed stage)**

| Age | Male         |              |              | Female       |              |              | Male-Female % Difference |              |              |
|-----|--------------|--------------|--------------|--------------|--------------|--------------|--------------------------|--------------|--------------|
|     | 10th<br>%ile | 50th<br>%ile | 90th<br>%ile | 10th<br>%ile | 50th<br>%ile | 90th<br>%ile | 10th<br>%ile             | 50th<br>%ile | 90th<br>%ile |
| 9   | 8.94         | 10.03        | 11.13        | 8.82         | 9.72         | 10.61        | 1.36%                    | 3.19%        | 4.90%        |
| 10  | 8.95         | 10.13        | 11.31        | 8.76         | 9.75         | 10.74        | 2.17%                    | 3.90%        | 5.31%        |
| 11  | 8.97         | 10.25        | 11.53        | 8.72         | 9.78         | 10.85        | 2.87%                    | 4.81%        | 6.27%        |
| 12  | 9.05         | 10.47        | 11.89        | 8.69         | 9.83         | 10.95        | 4.14%                    | 6.51%        | 8.58%        |
| 13  | 9.18         | 10.73        | 12.29        | 8.69         | 9.86         | 11.03        | 5.64%                    | 8.82%        | 11.42%       |
| 14  | 9.32         | 10.96        | 12.61        | 8.70         | 9.89         | 11.07        | 7.13%                    | 10.82%       | 13.91%       |
| 15  | 9.42         | 11.13        | 12.84        | 8.70         | 9.91         | 11.11        | 8.28%                    | 12.31%       | 15.57%       |
| 16  | 9.51         | 11.27        | 13.03        | 8.71         | 9.93         | 11.14        | 9.18%                    | 13.49%       | 16.97%       |
| 17  | 9.60         | 11.41        | 13.23        | 8.72         | 9.96         | 11.09        | 10.09%                   | 14.56%       | 19.30%       |

89. Evaluating these data, a 9-year-old boy in the 50th percentile (that is to say a 9-year-old boy of average running speed) will run faster in the final stage of the 20 m shuttle run than 9 through 17-year-old girls in the 50th percentile. Similarly, a 9-year-old boy in the 90th percentile will run faster in the final stage of the 20-m shuttle run than 9 through 15, and 17-year-old girls in the 90th percentile and will be 0.01 km/h (0.01%) slower than 16-year-old girls in the 90th percentile.

90. Just using these two examples for bent arm hang and 20-m shuttle running speed (Tomkinson 2107, Tomkinson 2018) based on large sample sizes (thus having tremendous statistical power) it becomes apparent that a 9-year-old boy will be very likely to outperform similarly trained girls of his own age and older in athletic events involving upper body muscle strength and/or running speed.

91. Another report published in 2014 analyzed physical fitness measurements of 10,302 children aged 6 -10.9 years of age, from the European countries of Sweden, Germany, Hungary, Italy, Cyprus, Spain, Belgium, and Estonia. (De Miguel-Etayo et al. 2014.) The authors observed "... that boys performed better than girls in speed, lower- and upper-limb strength and cardiorespiratory fitness." (57) The data showed that for children of comparable fitness (i.e. 99th percentile boys vs. 99th percentile girls, 50th percentile boys vs. 50th percentile girls, etc.) the boys outperform the girls at every age in measurements of handgrip strength, standing long jump, 20-m shuttle run, and predicted VO<sub>2</sub>max (pages 63 and 64, respectively). For clarification, VO<sub>2</sub>max is the maximal oxygen consumption, which correlates to 30-40% of success in endurance sports.

92. The standing long jump, also called the Broad Jump, is a common and easy to administer test of explosive leg power used in the Eurofit Physical Fitness Test Battery and in the NFL Combine. In the standing long jump, the participant stands behind a line marked on the ground with feet slightly apart. A two-foot take-

off and landing is used, with swinging of the arms and bending of the knees to provide forward drive. The participant attempts to jump as far as possible, landing on both feet without falling backwards. The measurement is taken from takeoff line to the nearest point of contact on the landing (back of the heels) with the best of three attempts being scored.

93. Using data from De Miguel-Etayo et al. (2014, table 3 at 61), which analyzed physical fitness measurements of 10,302 children aged 6 -10.9 years of age, from the European countries of Sweden, Germany, Hungary, Italy, Cyprus, Spain, Belgium, and Estonia, the following table sampling the low, middle, and top decile for standing long jump for 6- to 9-year-old children can be constructed:

**Standing Broad Jump (cm) for children ages 6-9 years**

| Age    | Male      |           |           | Female    |           |           | Male-Female % Difference |           |           |
|--------|-----------|-----------|-----------|-----------|-----------|-----------|--------------------------|-----------|-----------|
|        | 10th %ile | 50th %ile | 90th %ile | 10th %ile | 50th %ile | 90th %ile | 10th %ile                | 50th %ile | 90th %ile |
| 6-<6.5 | 77.3      | 103.0     | 125.3     | 69.1      | 93.8      | 116.7     | 11.9%                    | 9.8%      | 7.4%      |
| 6.5-<7 | 82.1      | 108.0     | 130.7     | 73.6      | 98.7      | 121.9     | 11.5%                    | 9.4%      | 7.2%      |
| 7-<7.5 | 86.8      | 113.1     | 136.2     | 78.2      | 103.5     | 127.0     | 11.0%                    | 9.3%      | 7.2%      |
| 7.5-<8 | 91.7      | 118.2     | 141.6     | 82.8      | 108.3     | 132.1     | 10.7%                    | 9.1%      | 7.2%      |
| 8-<8.5 | 96.5      | 123.3     | 146.9     | 87.5      | 113.1     | 137.1     | 10.3%                    | 9.0%      | 7.1%      |
| 8.5-<9 | 101.5     | 128.3     | 152.2     | 92.3      | 118.0     | 142.1     | 10.0%                    | 8.7%      | 7.1%      |

94. Another study of Eurofit results for over 400,000 Greek children reported similar results. “[C]ompared with 6-year-old females, 6-year-old males completed 16.6% more shuttle runs in a given time and could jump 9.7% further from a standing position.” (Hilton 2021 at 201, summarizing findings of Tambalis et al. 2016.)

95. Silverman (2011) gathered hand grip data, broken out by age and sex, from a number of studies. Looking only at the nine direct comparisons within individual studies tabulated by Silverman for children aged 7 or younger, in eight of these the boys had strength advantages of between 13 and 28 percent, with the remaining outlier recording only a 4% advantage for 7-year-old boys. (Silverman 2011 Table 1.)

96. To help illustrate the importance of one specific measure of physical fitness in athletic performance, Pocek (2021) stated that to be successful, volleyball “players should distinguish themselves, besides in skill level, in terms of above-average body height, upper and lower muscular power, speed, and agility. Vertical jump is a fundamental part of the spike, block, and serve.” (8377) Pocek further stated that “relative vertical jumping ability is of great importance in volleyball regardless of the players’ position, while absolute vertical jump values can differentiate players not only in terms of player position and performance level but in their career trajectories.” (8382)

97. Using data from Ramírez-Vélez (2017; table 2 at 994) which analyzed vertical jump measurements of 7,614 healthy Colombian schoolchildren aged 9 -17.9 years of age the following table sampling the low, middle, and top decile for vertical jump can be constructed:

**Vertical Jump Height (cm) for children ages 9 - 17 years**

| Age | Male      |           |           | Female    |           |           | Male-Female % Difference |           |           |
|-----|-----------|-----------|-----------|-----------|-----------|-----------|--------------------------|-----------|-----------|
|     | 10th %ile | 50th %ile | 90th %ile | 10th %ile | 50th %ile | 90th %ile | 10th %ile                | 50th %ile | 90th %ile |
| 9   | 18.0      | 24.0      | 29.5      | 16.0      | 22.3      | 29.0      | 12.5%                    | 7.6%      | 1.7%      |
| 10  | 19.5      | 25.0      | 32.0      | 18.0      | 24.0      | 29.5      | 8.3%                     | 4.2%      | 8.5%      |
| 11  | 21.0      | 27.0      | 32.5      | 19.5      | 25.0      | 31.0      | 7.7%                     | 8.0%      | 4.8%      |
| 12  | 22.0      | 27.5      | 34.5      | 20.0      | 25.5      | 31.5      | 10.0%                    | 7.8%      | 9.5%      |
| 13  | 23.0      | 30.5      | 39.0      | 19.0      | 25.5      | 32.0      | 21.1%                    | 19.6%     | 21.9%     |
| 14  | 23.5      | 32.0      | 41.5      | 20.0      | 25.5      | 32.5      | 17.5%                    | 25.5%     | 27.7%     |
| 15  | 26.0      | 35.5      | 43.0      | 20.2      | 26.0      | 32.5      | 28.7%                    | 36.5%     | 32.3%     |
| 16  | 28.0      | 36.5      | 45.1      | 20.5      | 26.5      | 33.0      | 36.6%                    | 37.7%     | 36.7%     |
| 17  | 28.0      | 38.0      | 47.0      | 21.5      | 27.0      | 35.0      | 30.2%                    | 40.7%     | 34.3%     |

98. Similarly, using data from Taylor (2010; table 2, at 869) which analyzed vertical jump measurements of 1,845 children aged 10 -15 years in primary and secondary schools in the East of England, the following table sampling the low, middle, and top decile for vertical jump can be constructed:

**Vertical Jump Height (cm) for children 10 -15 years**

| Age | Male      |           |           | Female    |           |           | Male-Female % Difference |           |           |
|-----|-----------|-----------|-----------|-----------|-----------|-----------|--------------------------|-----------|-----------|
|     | 10th %ile | 50th %ile | 90th %ile | 10th %ile | 50th %ile | 90th %ile | 10th %ile                | 50th %ile | 90th %ile |
| 10  | 16.00     | 21.00     | 29.00     | 15.00     | 22.00     | 27.00     | 6.7%                     | -4.5%     | 7.4%      |
| 11  | 20.00     | 27.00     | 34.00     | 19.00     | 25.00     | 32.00     | 5.3%                     | 8.0%      | 6.3%      |
| 12  | 23.00     | 30.00     | 37.00     | 21.00     | 27.00     | 33.00     | 9.5%                     | 11.1%     | 12.1%     |
| 13  | 23.00     | 32.00     | 40.00     | 21.00     | 26.00     | 34.00     | 9.5%                     | 23.1%     | 17.6%     |
| 14  | 26.00     | 36.00     | 44.00     | 21.00     | 28.00     | 34.00     | 23.8%                    | 28.6%     | 29.4%     |
| 15  | 29.00     | 37.00     | 44.00     | 21.00     | 28.00     | 39.00     | 38.1%                    | 32.1%     | 12.8%     |

99. As can be seen from the data from Ramírez-Vélez (2017) and Taylor (2010), males consistently outperform females of the same age and percentile in vertical jump height. Both sets of data show that an 11-year-old boy in the 90th percentile for vertical jump height will outperform girls in the 90th percentile at ages 11 and 12, and will be equal to girls at ages 13, 14, and possibly 15. These data indicate that an 11-year-old would be likely to have an advantage over girls of the same age and older in sports such as volleyball where “absolute vertical jump

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

values can differentiate players not only in terms of player position and performance level but in their career trajectories.” (Pocek 2021 at 8382.)

100. Boys also enjoy an advantage in throwing well before puberty. “Boys exceed girls in throwing velocity by 1.5 standard deviation units as early as 4 to 7 years of age. . . The boys exceed the girls [in throwing distance] by 1.5 standard deviation units as early as 2 to 4 years of age.” (Thomas 1985 at 266.) This means that the average 4- to 7-year-old boy can out-throw approximately 87% of all girls of his age.

101. Record data from USA Track & Field indicate that boys outperform girls in track events even in the youngest age group for whom records are kept (age 8 and under).<sup>8</sup>

**American Youth Outdoor Track & Field Record times in  
age groups 8 and under (time in seconds)**

| <b>Event</b> | <b>Boys</b> | <b>Girls</b> | <b>Difference</b> |
|--------------|-------------|--------------|-------------------|
| 100M         | 13.65       | 13.78        | 0.95%             |
| 200M         | 27.32       | 28.21        | 3.26%             |
| 400M         | 62.48       | 66.10        | 5.79%             |
| 800M         | 148.59      | 158.11       | 6.41%             |
| 1500M        | 308.52      | 314.72       | 2.01%             |
| <b>Mean</b>  |             |              | 3.68%             |

102. Looking at the best times within a single year shows a similar pattern of consistent advantage for even young boys. I consider the 2018 USATF Region 8 Junior Olympic Championships for the youngest age group (8 and under).<sup>9</sup>

**2018 USATF Region 8 Junior Olympic Championships for the 8 and under age group**

| <b>Event</b> | <b>Boys</b> | <b>Girls</b> | <b>Difference</b> |
|--------------|-------------|--------------|-------------------|
| 100M         | 15.11       | 15.64        | 3.51%             |
| 200M         | 30.79       | 33.58        | 9.06%             |
| 400M         | 71.12       | 77.32        | 8.72%             |

| <b>Mean</b>  |             |              | 6.74%             |

<sup>8</sup><http://legacy.usatf.org/statistics/records/view.asp?division=american&location=outdoor%20track%20%26%20field&age=youth&sport=TF>

<sup>9</sup> <https://www.athletic.net/TrackAndField/meet/384619/results/m/1/100m>

<sup>9</sup> <https://www.athletic.net/CrossCountry/Division/List.aspx?DivID=62211>

103. Using Athletic.net<sup>9</sup>, for 2021 Cross Country and Track & Field data for boys and girls in the 7-8, 9-10, and 11-12 year old age group club reports, and for 5th, 6th, and 7th grade for the whole United States I have compiled the tables for 3000 m events, and for the 100-m, 200-m, 400-m, 800-m, 1600-m, 3000-m, long jump, and high jump Track and Field data to illustrate the differences in individual athletic performance between boys and girls, all of which appear in the Appendix. The pattern of males outperforming females was consistent across events, with rare anomalies, only varying in the magnitude of difference between males and females.

104. Similarly, using Athletic.net, for 2021 Track & Field data for boys and girls in the 6<sup>th</sup> grade for the state of West Virginia, I have compiled tables, which appear in the appendix, comparing the performance of boys and girls for the 100-m, 200-m, 400-m, 800-m, 1600-m, and 3200-m running events in which the 1<sup>st</sup> place boy was consistently faster than the 1<sup>st</sup> place girl, and the average performance of the top 10 boys was consistently faster than the average performance for the top 10 girls. Based on the finishing times for the 1<sup>st</sup> place boy and girl in the 6<sup>th</sup> grade in West Virginia 1600-m race, and extrapolating the running time to a running pace, the 1<sup>st</sup> place boy would be expected to finish 273 m in front of the 1<sup>st</sup> place girl, which is 2/3 of a lap on a standard 400-m track, or almost the length of 3 football fields. In comparison, the 1<sup>st</sup> place boy would finish 66 m in front of the 2nd place boy, and the 1<sup>st</sup> place girl would finish 20 m in front of the 2<sup>nd</sup> place girl.

represent a social–cultural bias for boys to be more physically active, rather than representing inherent sex-based differences in pre-pubertal physical fitness. However, the younger the age at which such differences are observed, and the more egalitarian the culture within which they are observed, the less plausible this hypothesis becomes. Eiberg et al. (2005) measured body composition, VO<sub>2</sub>max, and physical activity in 366 Danish boys and 332 Danish girls between the ages of 6 and 7 years old. Their observations indicated that VO<sub>2</sub>max was 11% higher in boys than girls. When expressed relative to body mass the boys' VO<sub>2</sub>max was still 8% higher than the girls. The authors stated that “...no differences in haemoglobin or sex hormones<sup>10</sup> have been reported in this age group,” yet “... when children with the same VO<sub>2</sub>max were compared, boys were still more active, and in boys and girls with the same P[hysical] A[ctivity] level, boys were fitter.” (728). These data indicate that in pre-pubertal children, in a very egalitarian culture regarding gender roles and gender norms, boys still have a measurable advantage in regards to aerobic fitness when known physiological and physical activity differences are accounted for.

108. And, as I have mentioned above, even by the age of 4 or 5, in a ruler-drop test, boys exhibit 4% to 6% faster reaction times than girls. (Latorre-Roman 2018.)

109. When looking at the data on testosterone concentrations previously presented, along with the data on physical fitness and athletic performance presented, boys have advantages in athletic performance and physical fitness before there are marked differences in testosterone concentrations between boys and girls.

110. For the most part, the data I review above relate to pre-pubertal children. Today, we also face the question of inclusion in female athletics of males who have undergone “puberty suppression.” The UK Sport Councils Literature Review notes that, “In the UK, so-called ‘puberty blockers’ are generally not used until Tanner maturation stage 2-3 (i.e. after puberty has progressed into early sexual maturation).” (9.) While it is outside my expertise, my understanding is that current practice with regard to administration of puberty blockers is similar in the United States. Tanner stages 2 and 3 generally encompass an age range from 10 to 14 years old, with significant differences between individuals. Like the authors of the UK Sports Council Literature Review, I am “not aware of research” directly addressing the implications for athletic capability of the use of puberty blockers. (UK Sport Councils Literature Review at 9.) As Handelsman documents, the male advantage begins to increase rapidly—along with testosterone levels—at about age 11, or “very closely aligned to the timing of the onset of male puberty.” (Handelsman 2017.) It seems likely that males who have undergone puberty suppression will

---

<sup>10</sup> This term would include testosterone and estrogens.

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

have physiological and performance advantages over females somewhere between those possessed by pre-pubertal boys, and those who have gone through full male puberty, with the degree of advantage in individual cases depending on that individual's development and the timing of the start of puberty blockade.

111. Tack et al. (2018) observed that in 21 transgender-identifying biological males, administration of antiandrogens for 5-31 months (commencing at  $16.3 \pm 1.21$  years of age), resulted in nearly, but not completely, halting of normal age-related *increases* in muscle strength. Importantly, muscle strength did not decrease after administration of antiandrogens. Rather, despite antiandrogens, these individuals retained higher muscle mass, lower percent body fat, higher body mass, higher body height, and higher grip strength than comparable girls of the same age. (Supplemental tables).

112. Klaver et al. (2018 at 256) demonstrated that the use of puberty blockers did not eliminate the differences in lean body mass between biological male and female teenagers. Subsequent use of puberty blockers combined with cross-sex hormone use (in the same subjects) still did not eliminate the differences in lean body mass between biological male and female teenagers. Furthermore, by 22 years of age, the use of puberty blockers, and then puberty blockers combined with cross sex hormones, and then cross hormone therapy alone for over 8 total years of treatment still had not eliminated the difference in lean body mass between biological males and females.

113. The effects of puberty blockers on growth and development, including muscle mass, fat mass, or other factors that influence athletic performance, have been minimally researched. Indeed, Klaver et al. (2018) is the only published research that I am aware of that has evaluated the use of puberty blockers on body composition. As stated by Roberts and Carswell (2021), "No published studies have fully characterized the impact of [puberty blockers on] final adult height or current height in an actively growing TGD youth." (1680). Likewise, "[n]o published literature provides guidance on how to best predict the final adult height for TGD youth receiving GnRHa and gender-affirming hormonal treatment." (1681). Thus, the effect of prescribing puberty blockers to a male child before the onset of puberty on the physical components of athletic performance is largely unknown. There is not any scientific evidence that such treatment eliminates the pre-existing performance advantages that prepubertal males have over prepubertal females.

**B. The rapid increase in testosterone across male puberty drives characteristic male physiological changes and the increasing performance advantages.**

114. While boys exhibit some performance advantage even before puberty, it is both true and well known to common experience that the male advantage

increases rapidly, and becomes much larger, as boys undergo puberty and become men. Empirically, this can be seen by contrasting the modest advantages reviewed immediately above against the large performance advantages enjoyed by men that I have detailed in Section II.

115. Multiple studies (along with common observation) document that the male performance advantage begins to increase during the early years of puberty, and then increases rapidly across the middle years of puberty (about ages 12-16). (Tønnessen 2015; Handelsman 2018 at 812-813.) Since it is well known that testosterone levels increase by more than an order of magnitude in boys across puberty, it is unsurprising that Handelsman finds that these increases in male performance advantage correlate to increasing testosterone levels, as presented in his chart reproduced below. (Handelsman 2018 at 812-13.)

116. Handelsman further finds that certain characteristic male changes including boys' increase in muscle mass do not begin at all until "circulating testosterone concentrations rise into the range of males at mid-puberty, which are higher than in women at any age." (Handelsman 2018 at 810.)

117. Knox et al. (2019) agree that "[i]t is well recognised that testosterone contributes to physiological factors including body composition, skeletal structure, and the cardiovascular and respiratory systems across the life span, with significant influence during the pubertal period. These physiological factors underpin strength, speed, and recovery with all three elements required to be competitive in almost all sports." (Knox 2019 at 397.) "High testosterone levels and prior male physiology provide an all-purpose benefit, and a substantial advantage. As the IAAF says, "To the best of our knowledge, there is no other genetic or biological trait encountered in female athletics that confers such a huge performance advantage." (Knox 2019 at 399.)

118. However, the undisputed fact that high (that is, normal male) levels of testosterone drive the characteristically male physiological changes that occur across male puberty does not at all imply that artificially *depressing* testosterone levels after those changes occur will reverse all or most of those changes so as to eliminate the male athletic advantage. This is an empirical question. As it turns out, the answer is that while some normal male characteristics can be changed by means of testosterone suppression, others cannot be, and all the reliable evidence indicates that males retain large athletic advantages even after long-term testosterone suppression.

**V. The available evidence shows that suppression of testosterone in a male after puberty has occurred does not substantially eliminate the male athletic advantage.**

119. The 2011 “NCAA Policy on Transgender Student-Athlete Participation” requires only that males who identify as transgender be on unspecified and unquantified “testosterone suppression treatment” for “one calendar year” prior to competing in women’s events. In supposed justification of this policy, the NCAA’s Office of Inclusion asserts that, “It is also important to know that any strength and endurance advantages a transgender woman arguably may have as a result of her prior testosterone levels dissipate after about one year of estrogen or testosterone-suppression therapy.” (NCAA 2011 at 8.)

120. Similarly, writing in 2018, Handelsman et al. could speculate that even though some male advantages established during puberty are “fixed and irreversible (bone size),” “[t]he limited available prospective evidence . . . suggests that the advantageous increases in muscle and hemoglobin due to male circulating testosterone concentrations are induced or reversed during the first 12 months.” (Handelsman 2018 at 824.)

121. But these assertions or hypotheses of the NCAA and Handelsman are now strongly contradicted by the available science. In this section, I examine what is known about whether suppression of testosterone in males can eliminate the male physiological and performance advantages over females.

**A. Empirical studies find that males retain a strong performance advantage even after lengthy testosterone suppression.**

122. As my review in Section II indicates, a very large body of literature documents the large performance advantage enjoyed by males across a wide range of athletics. To date, only a limited number of studies have directly measured the effect of testosterone suppression and the administration of female hormones on the athletic performance of males. These studies report that testosterone suppression for a full year (and in some cases much longer) does not come close to eliminating

male advantage in strength (hand grip, leg strength, and arm strength) or running speed.

### **Hand Grip Strength**

123. As I have noted, hand grip strength is a well-accepted proxy for general strength. Multiple separate studies, from separate groups, report that males retain a large advantage in hand strength even after testosterone suppression to female levels.

124. In a longitudinal study, Van Caenegem et al. reported that males who underwent standard testosterone suppression protocols lost only 7% hand strength after 12 months of treatment, and only a cumulative 9% after two years. (Van Caenegem 2015 at 42.) As I note above, on average men exhibit in the neighborhood of 60% greater hand grip strength than women, so these small decreases do not remotely eliminate that advantage. Van Caenegem et al. document that their sample of males who elected testosterone suppression began with less strength than a control male population. Nevertheless, after one year of suppression, their study population still had hand grip only 21% less than the control male population, and thus still far higher than a female population. (Van Caenegem 2015 at 42.)

125. Scharff et al. (2019) measured grip strength in a large cohort of male-to-female subjects from before the start of hormone therapy through one year of hormone therapy. The hormone therapy included suppression of testosterone to less than 2 nml/L “in the majority of the transwomen,” (1024), as well as administration of estradiol (1021). These researchers observed a small decrease in grip strength in these subjects over that time (Fig. 2), but mean grip strength of this group remained far higher than mean grip strength of females—specifically, “After 12 months, the median grip strength of transwomen [male-to-female subjects] still falls in the 95th percentile for age-matched females.” (1026).

126. Still a third longitudinal study, looking at teen males undergoing testosterone suppression, “noted no change in grip strength after hormonal treatment (average duration 11 months) of 21 transgender girls.” (Hilton 2021 at 207, summarizing Tack 2018.)

127. In a fourth study, Lapauw et al. (2008) looked at the extreme case of testosterone suppression by studying a population of 23 biologically male individuals who had undergone at least two years of testosterone suppression, followed by sex reassignment surgery that included “orchidectomy” (that is, surgical castration), and then at least an additional three years before the study date. Comparing this group against a control of age- and height-matched healthy males, the researchers found that the individuals who had gone through testosterone suppression and then surgical castration had an average hand grip (41 kg) that was

24% weaker than the control group of healthy males. But this remains at least 25% *higher* than the average hand-grip strength of biological females as measured by Bohannon et al. (2019).

128. Summarizing these and a few other studies measuring strength loss (in most cases based on hand grip) following testosterone suppression, Harper et al. (2021) conclude that “strength loss with 12 months of [testosterone suppression] . . . ranged from non-significant to 7%. . . . [T]he small decrease in strength in transwomen after 12-36 months of [testosterone suppression] suggests that transwomen likely retain a strength advantage over cisgender women.” (Hilton 2021 at 870.)

### Arm Strength

129. Lapauw et al. (2008) found that 3 years after surgical castration, preceded by at least two years of testosterone suppression, biologically male subjects had 33% less bicep strength than healthy male controls. (Lapauw (2008) at 1018.) Given that healthy men exhibit between 89% and 109% greater arm strength than healthy women, this leaves a very large residual arm strength advantage over biological women.

130. Roberts et al. have recently published an interesting longitudinal study, one arm of which considered biological males who began testosterone suppression and cross-sex hormones while serving in the United States Air Force. (Roberts 2020.) One measured performance criterion was pushups per minute, which, while not exclusively, primarily tests arm strength under repetition. *Before* treatment, the biological male study subjects who underwent testosterone suppression could do 45% more pushups per minute than the average for all Air Force women under the age of 30 (47.3 vs. 32.5). *After* between one and two years of testosterone suppression, this group could still do 33% more pushups per minute. (Table 4.) Further, the body weight of the study group did not decline at all after one to two years of testosterone suppression (in fact rose slightly) (Table 3), and was approximately 24 pounds (11.0 kg) higher than the average for Air Force women under the age of 30. (Roberts 2020 at 3.) This means that the individuals who had undergone at least one year of testosterone suppression were not only doing 1/3 more pushups per minute, but were lifting significantly more weight with each pushup.

131. After two years of testosterone suppression, the study sample in Roberts et al. was only able to do 6% more pushups per minute than the Air Force female average. But their weight remained unchanged from their pre-treatment starting point, and thus about 24 pounds higher than the Air Force female average. As Roberts et al. explain, “as a group, transwomen weigh more than CW [cis-women]. Thus, transwomen will have a higher power output than CW when

performing an equivalent number of push-ups. Therefore, our study may underestimate the advantage in strength that transwomen have over CW.” (Roberts 2020 at 4.)

### **Leg Strength**

132. Wiik et al. (2020), in a longitudinal study that tracked 11 males from the start of testosterone suppression through 12 months after treatment initiation, found that isometric strength levels measured at the knee “were maintained over the [study period].”<sup>11</sup> (808) “At T12 [the conclusion of the one-year study], the absolute levels of strength and muscle volume were greater in [male-to-female subjects] than in . . . CW [women who had not undergone any hormonal therapy].” (Wiik 2020 at 808.) In fact, Wiik et al. reported that “muscle strength after 12 months of testosterone suppression was comparable to baseline strength. As a result, transgender women remained about 50% stronger than . . . a reference group of females.” (Hilton 2021 at 207, summarizing Wiik 2020.)

133. Lapauw et al. (2008) found that 3 years after surgical castration, preceded by at least two years of testosterone suppression, subjects had peak knee torque only 25% lower than healthy male controls. (Lapauw 2008 at 1018.) Again, given that healthy males exhibit 54% greater maximum knee torque than healthy females, this leaves these individuals with a large average strength advantage over females even years after sex reassignment surgery.

### **Running speed**

134. The most striking finding of the recent Roberts et al. study concerned running speed over a 1.5 mile distance—a distance that tests midrange endurance. Before suppression, the MtF study group ran 21% faster than the Air Force female average. After at least 2 year of testosterone suppression, these subjects still ran 12% faster than the Air Force female average. (Roberts 2020 Table 4.)

135. The specific experience of the well-known case of NCAA athlete Cece Telfer is consistent with the more statistically meaningful results of Roberts et al., further illustrating that male-to-female transgender treatment does not negate the inherent athletic performance advantages of a post-pubertal male. In 2016 and 2017 Cece Telfer competed as Craig Telfer on the Franklin Pierce University men’s track team, being ranked 200<sup>th</sup> and 390<sup>th</sup> (respectively) against other NCAA Division 2 men. “Craig” Telfer did not qualify for the National Championships in any events. Telfer did not compete in the 2018 season while undergoing testosterone

---

<sup>11</sup> Isometric strength measures muscular force production for a given amount of time at a specific joint angle but with no joint movement.

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

suppression (per NCAA policy). In 2019 Cece Telfer competed on the Franklin Pierce University *women's* team, qualified for the NCAA Division 2 Track and Field National Championships, and placed 1st in the women's 400 meter hurdles and placed third in the women's 100 meter hurdles. (For examples of the media coverage of this please see <https://www.washingtontimes.com/news/2019/jun/3/cece-telfer-franklin-pierce-transgenderhurdler-wi/> last accessed May 29, 2020. <https://www.newshub.co.nz/home/sport/2019/06/athletics-transgender-woman-cece-telfer-whopreviously-competed-as-a-man-wins-ncaa-track-championship.html> (last accessed May 29, 2020).)

136. The table below shows the best collegiate performance times from the combined 2015 and 2016 seasons for Cece Telfer when competing as a man in men's events, and the best collegiate performance times from the 2019 season when competing as a woman in women's events. Comparing the times for the running events (in which male and female athletes run the same distance) there is no statistical difference between Telfer's "before and after" times. Calculating the difference in time between the male and female times, Telfer performed an average of 0.22% *faster* as a female. (Comparing the performance for the hurdle events (marked with H) is of questionable validity due to differences between men's and women's events in hurdle heights and spacing, and distance for the 110m vs. 100 m.) While this is simply one example, and does not represent a controlled experimental analysis, this information provides some evidence that male-to-female transgender treatment does not negate the inherent athletic performance advantages of a postpubertal male. (These times were obtained from [https://www.tfrrs.org/athletes/6994616/Franklin\\_Pierce/CeCe\\_Telfer.html](https://www.tfrrs.org/athletes/6994616/Franklin_Pierce/CeCe_Telfer.html) and <https://www.tfrrs.org/athletes/5108308.html>, last accessed May 29, 2020).

| As Craig Telfer (male athlete) |                | As Cece Telfer (female athlete) |                |
|--------------------------------|----------------|---------------------------------|----------------|
| Event                          | Time (seconds) | Event                           | Time (seconds) |
| 55                             | 7.01           | 55                              | 7.02           |

| 400 H ‡                        | 57.34          | 400 H ‡                         | 57.53**        |

\* women's 3<sup>rd</sup> place, NCAA Division 2 National Championships

\*\* women's 1<sup>st</sup> place, NCAA Division 2 National Championships

† men's hurdle height is 42 inches with differences in hurdle spacing between men and women

‡ men's hurdle height is 36 inches, women's height is 30 inches with the same spacing between hurdles

137. Similarly, University of Pennsylvania swimmer Lia Thomas began competing in the women's division in the fall of 2021, after previously competing for U. Penn. in the men's division. Thomas has promptly set school, pool, and/or league women's records in 200 yard freestyle, 500 yard freestyle, and 1650 yard freestyle competitions, beating the nearest female in the 1650 yard by an unheard-of 38 seconds.

138. In a pre-peer review article, Senefeld, Coleman, Hunter, and Joyner (doi: <https://doi.org/10.1101/2021.12.28.21268483>, accessed January 12, 2022) "compared the gender-related differences in performance of a transgender swimmer who competed in both the male and female NCAA (collegiate) categories to the sex-related differences in performance of world and national class swimmers" and observed that this athlete [presumably Lia Thomas based on performance times and the timing of this article] was unranked in 2018-2019 in the 100-yard, ranked 551<sup>st</sup> in the 200-yard, 65<sup>th</sup> in the 500-yard 32<sup>nd</sup> in the 1650-yards men's freestyle. After following the NCAA protocol for testosterone suppression and competing as a woman in 2021-2022, this swimmer was ranked 94<sup>th</sup> in the 100-yard, 1<sup>st</sup> in the 200-yard, 1<sup>st</sup> in the 500-yard, and 6<sup>th</sup> in the 1650-yard women's freestyle. The performance times swimming as a female, when compared to swimming as a male, were 4.6% slower in the 100-yard, 2.6% slower in the 200-yard, 5.6% slower in the 500-yard, and 6.8% slower in the 1650-yard events than when swimming as a male. *It is important to note that these are mid-season race times and do not represent season best performance times or in a championship event where athletes often set their personal record times.* The authors concluded "...that for middle distance events (100, 200 and 400m or their imperial equivalents) lasting between about one and five minutes, the decrements in performance of the transgender woman swimmer are less than expected on the basis of a comparison of a large cohort of world and national class performances by female and male swimmers" and "it is possible that the relative improvements in this swimmer's rankings in the women's category relative to the men's category are due to legacy effects of testosterone on a number of physiological factors that can influence athletic performance."

139. Harper (2015) has often been cited as "proving" that testosterone suppression eliminates male advantage. And indeed, hedged with many disclaimers, the author in that article does more or less make that claim with respect to "distance races," while emphasizing that "the author makes no claims as to the equality of performances, pre and post gender transition, in any other sport." (Harper 2015 at 8.) However, Harper (2015) is in effect a collection of unverified anecdotes, not science. It is built around self-reported race times from just eight self-selected transgender runners, recruited "mostly" online. How and on what websites the subjects were recruited is not disclosed, nor is anything said about how those not recruited online were recruited. Thus, there is no information to tell us whether these eight runners could in any way be representative, and the

recruitment pools and methodology, which could bear on ideological bias in their self-reports, is not disclosed.

140. Further, the self-reported race times relied on by Harper (2015) *span 29 years*. It is well known that self-reported data, particularly concerning emotionally or ideologically fraught topics, is unreliable, and likewise that memory of distant events is unreliable. Whether the subjects were responding from memory or from written records, and if so what records, is not disclosed, and does not appear to be known to the author. For six of the subjects, the author claims to have been able to verify “approximately half” of the self-reported times. Which scores these are is not disclosed. The other two subjects responded only anonymously, so nothing about their claims could be or was verified. In short, neither the author nor the reader knows whether the supposed “facts” on which the paper’s analysis is based are true.

141. Even if we could accept them at face value, the data are largely meaningless. Only two of the eight study subjects reported (undefined) “stable training patterns,” and even with consistent training, athletic performance generally declines with age. As a result, when the few data points span 29 years, it is not possible to attribute declines in performance to asserted testosterone suppression. Further, distance running is usually not on a track, and race times vary significantly depending on the course and the weather. Only one reporting subject who claimed a “stable training pattern” reported “before and after” times on the same course within three years’ time,” which the author acknowledges would “represent the best comparison points.”

142. Harper (2015) to some extent acknowledges its profound methodological flaws, but seeks to excuse them by the difficulty of breaking new ground. The author states that, “The first problem is how to formulate a study to create a meaningful measurement of athletic performance, both before and after testosterone suppression. No methodology has been previously devised to make meaningful measurements.” (2) This statement was not accurate at the time of publication, as there are innumerable publications with validated methodology for comparing physical fitness and/or athletic performance between people of different ages, sexes, and before and after medical treatment, any of which could easily have been used with minimal or no adaptation for the purposes of this study. Indeed, well before the publication of Harper (2015), several authors that I have cited in this review had performed and published disciplined and methodologically reliable studies of physical performance and physiological attributes “before and after” testosterone suppression.

143. More recently, and to her credit, Harper has acknowledged the finding of Roberts (2020) regarding the durable male advantage in running speed in the 1.5 mile distance, even after two years of testosterone suppression. She joins with co-

authors in acknowledging that this study of individuals who (due to Air Force physical fitness requirements) “could at least be considered exercise trained,” agrees that Roberts’ data shows that “transwomen ran significantly faster during the 1.5 mile fitness test than ciswomen,” and declares that this result is “consistent with the findings of the current review in untrained transgender individuals” that even 30 months of testosterone suppression does not eliminate all male advantages “associated with muscle endurance and performance.” (Harper 2021 at 8.) The Harper (2021) authors conclude overall “that strength may be well preserved in transwomen during the first 3 years of hormone therapy,” and that [w]hether transgender and cisgender women can engage in meaningful sport [in competition with each other], even after [testosterone suppression], is a highly debated question.” (Harper 2021 at 1, 8.)

144. Higerd (2021) “[a]ssess[ed] the probability of a girls’ champion being biologically male” by evaluating 920,11 American high school track and field performances available through the track and field database Athletic.net in five states (CA, FL, MN, NY, WA), over three years (2017 – 2019), in eight events; high jump, long jump, 100M, 200M, 400M, 800M, 1600M, and 3200M and estimated that “there is a simulated 81%-98% probability of transgender dominance occurring in the female track and field event” and further concluded that “in the majority of cases, the entire podium (top of the state) would be MTF [transgender athletes]” (at xii).

### **B. Testosterone suppression does not reverse important male physiological advantages.**

145. We see that, once a male has gone through male puberty, later testosterone suppression (or even castration) leaves large strength and performance advantages over females in place. It is not surprising that this is so. What is now a fairly extensive body of literature has documented that many of the specific male physiological advantages that I reviewed in Section II are not reversed by testosterone suppression after puberty, or are reduced only modestly, leaving a large advantage over female norms still in place.

146. Handelsman has well documented that the large increases in physiological and performance advantages characteristic of men develop in tandem with, and are likely driven by, the rapid and large increases in circulating testosterone levels that males experience across puberty, or generally between the ages of about 12 through 18. (Handelsman 2018.) Some have misinterpreted Handelsman as suggesting that all of those advantages are and remain entirely dependent—on an ongoing basis—on *current* circulating testosterone levels. This is a misreading of Handelsman, who makes no such claim. As the studies reviewed above demonstrate, it is also empirically false with respect to multiple measures of

performance. Indeed, Handelsman himself, referring to the Roberts et al. (2020) study which I describe below, has recently written that “transwomen treated with estrogens after completing male puberty experienced only minimal declines in physical performance over 12 months, substantially surpassing average female performance for up to 8 years.” (Handelsman 2020.)

147. As to individual physiological advantages, the more accurate and more complicated reality is reflected in a statement titled “The Role of Testosterone in Athletic Performance,” published in 2019 by several dozen sports medicine experts and physicians from many top medical schools and hospitals in the U.S. and around the world. (Levine et al. 2019.) This expert group concurs with Handelsman regarding the importance of testosterone to the male advantage, but recognizes that those advantages depend not only on *current* circulating testosterone levels in the individual, but on the “exposure in biological males to much higher levels of testosterone during growth, development, and throughout the athletic career.” (*Emphasis added.*) In other words, both past and current circulating testosterone levels affect physiology and athletic capability.

148. Available research enables us to sort out, in some detail, which specific physiological advantages are immutable once they occur, which can be reversed only in part, and which appear to be highly responsive to later hormonal manipulation. The bottom line is that very few of the male physiological advantages I have reviewed in Section II above are largely reversible by testosterone suppression once an individual has passed through male puberty.

### **Skeletal Configuration**

149. It is obvious that some of the physiological changes that occur during “growth and development” across puberty cannot be reversed. Some of these irreversible physiological changes are quite evident in photographs that have recently appeared in the news of transgender competitors in female events. These include skeletal configuration advantages including:

- Longer and larger bones that give height, weight, and leverage advantages to men;
- More advantageous hip shape and configuration as compared to women.

### **Cardiovascular Advantages**

150. Developmental changes for which there is no apparent means of reversal, and no literature suggesting reversibility, also include multiple

contributors to the male cardiovascular advantage, including diaphragm placement, lung and trachea size, and heart size and therefore pumping capacity.<sup>12</sup>

151. On the other hand, the evidence is mixed as to hemoglobin concentration, which as discussed above is a contributing factor to  $\dot{V}O_2$  max. Harper (2021) surveyed the literature and found that “Nine studies reported the levels of Hgb [hemoglobin] or HCT [red blood cell count] in transwomen before and after [testosterone suppression], from a minimum of three to a maximum of 36 months post hormone therapy. Eight of these studies. . . found that hormone therapy led to a significant (4.6%–14.0%) decrease in Hgb/HCT ( $p < 0.01$ ), while one study found no significant difference after 6 months,” but only one of those eight studies returned results at the generally accepted 95% confidence level. (Harper 2021 at 5-6 and Table 5.)

152. I have not found any study of the effect of testosterone suppression on the male advantage in mitochondrial biogenesis.

### **Muscle mass**

153. Multiple studies have found that muscle mass decreases modestly or not at all in response to testosterone suppression. Knox et al. report that “healthy young men did not lose significant muscle mass (or power) when their circulating testosterone levels were reduced to 8.8 nmol/L (lower than the 2015 IOC guideline of 10 nmol/L) for 20 weeks.” (Knox 2019 at 398.) Gooren found that “[i]n spite of muscle surface area reduction induced by androgen deprivation, after 1 year the mean muscle surface area in male-to- female transsexuals remained significantly greater than in untreated female-to-male transsexuals.” (Gooren 2011 at 653.) An earlier study by Gooren found that after one year of testosterone suppression, muscle mass at the thigh was reduced by only about 10%, exhibited “no further reduction after 3 years of hormones,” and “remained significantly greater” than in his sample of untreated women. (Gooren 2004 at 426-427.) Van Caenegem et al. found that muscle cross section in the calf and forearm decreased only trivially (4% and 1% respectively) after two years of testosterone suppression. (Van Caenegem 2015 Table 4.)

154. Taking measurements one month after start of testosterone suppression in male-to-female (non-athlete) subjects, and again 3 and 11 months after start of feminizing hormone replacement therapy in these subjects, Wiik et al.

---

<sup>12</sup> “[H]ormone therapy will not alter ... lung volume or heart size of the transwoman athlete, especially if [that athlete] transitions postpuberty, so natural advantages including joint articulation, stroke volume and maximal oxygen uptake will be maintained.” (Knox 2019 at 398.)

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

found that total lean tissue (i.e. primarily muscle) did not decrease significantly across the entire period. Indeed, “some of the [subjects] did not lose any muscle mass at all.” (Wiik 2020 at 812.) And even though they observed a small decrease in thigh muscle mass, they found that isometric strength levels measured at the knee “were maintained over the [study period].” (808) “At T12 [the conclusion of the one-year study], the absolute levels of strength and muscle volume were greater in [male-to-female subjects] than in [female-to-male subjects] and CW [women who had not undergone any hormonal therapy].” (808)

155. Hilton & Lundberg summarize an extensive survey of the literature as follows:

“12 longitudinal studies have examined the effects of testosterone suppression on lean body mass or muscle size in transgender women. The collective evidence from these studies suggests that 12 months, which is the most commonly examined intervention period, of testosterone suppression to female typical reference levels results in a modest (approximately– 5%) loss of lean body mass or muscle size. . . .

“Thus, given the large baseline differences in muscle mass between males and females (Table 1; approximately 40%), the reduction achieved by 12 months of testosterone suppression can reasonably be assessed as small relative to the initial superior mass. We, therefore, conclude that the muscle mass advantage males possess over females, and the performance implications thereof, are not removed by the currently studied durations (4 months, 1, 2 and 3 years) of testosterone suppression in transgender women. (Hilton 2021 at 205-207.)

156. When we recall that “women have 50% to 60% of men’s upper arm muscle cross-sectional area and 65% to 70% of men’s thigh muscle cross-sectional area” (Handelsman 2018 at 812), it is clear that Hilton’s conclusion is correct. In other words, biologically male subjects possess substantially larger muscles than biologically female subjects after undergoing a year or even three years of testosterone suppression.

157. I note that outside the context of transgender athletes, the testosterone-driven increase in muscle mass and strength enjoyed by these male-to-female subjects would constitute a disqualifying doping violation under all league anti-doping rules with which I am familiar.

**C. Responsible voices internationally are increasingly recognizing that suppression of testosterone in a male after puberty has occurred does not substantially reverse the male athletic advantage.**

158. The previous very permissive NCAA policy governing transgender participation in women's collegiate athletics was adopted in 2011, and the previous IOC guidelines were adopted in 2015. At those dates, much of the scientific analysis of the actual impact of testosterone suppression had not yet been performed, much less any wider synthesis of that science. In fact, a series of important peer-reviewed studies and literature reviews have been published only very recently, since I prepared my first paper on this topic, in early 2020.

159. These new scientific publications reflect a remarkably consistent consensus: once an individual has gone through male puberty, testosterone suppression does not substantially eliminate the physiological and performance advantages that that individual enjoys over female competitors.

160. Importantly, I have found no peer-reviewed scientific paper, nor any respected scientific voice, that is now asserting the contrary—that is, that testosterone suppression can eliminate or even largely eliminate the male biological advantage once puberty has occurred.

161. I excerpt the key conclusions from important recent peer-reviewed papers below.

162. Roberts 2020: “In this study, we confirmed that . . . the pretreatment differences between transgender and cis gender women persist beyond the 12-month time requirement currently being proposed for athletic competition by the World Athletics and the IOC.” (6)

163. Wiik 2020: The muscular and strength changes in males undergoing testosterone suppression “were modest. The question of when it is fair to permit a transgender woman to compete in sport in line with her experienced gender identity is challenging.” (812)

164. Harper 2021: “[V]alues for strength, LBM [lean body mass], and muscle area in transwomen remain above those of cisgender women, even after 36 months of hormone therapy.” (1)

165. Hilton & Lundberg 2021: “evidence for loss of the male performance advantage, established by testosterone at puberty and translating in elite athletes to a 10–50% performance advantage, is lacking. . . . These data significantly

undermine the delivery of fairness and safety presumed by the criteria set out in transgender inclusion policies . . .” (211)

166. Hamilton et al. 2020, “Response to the United Nations Human Rights Council’s Report on Race and Gender Discrimination in Sport: An Expression of Concern and a Call to Prioritize Research”: “There is growing support for the idea that development influenced by high testosterone levels may result in retained anatomical and physiological advantages . . . . If a biologically male athlete self-identifies as a female, legitimately with a diagnosis of gender dysphoria or illegitimately to win medals, the athlete already possesses a physiological advantage that undermines fairness and safety. This is not equitable, nor consistent with the fundamental principles of the Olympic Charter.”

167. Hamilton et al. 2021, “Consensus Statement of the Fédération Internationale de Médecine du Sport” (International Federation of Sports Medicine, or FIMS), signed by more than 60 sports medicine experts from prestigious institutions around the world: The available studies “make it difficult to suggest that the athletic capabilities of transwomen individuals undergoing HRT or GAS are comparable to those of cisgender women.” The findings of Roberts et al. “question the required testosterone suppression time of 12 months for transwomen to be eligible to compete in women’s sport, as most advantages over ciswomen were not negated after 12 months of HRT.”

168. Outside the forum of peer-reviewed journals, respected voices in sport are reaching the same conclusion.

169. The **Women’s Sports Policy Working Group** identifies among its members and “supporters” many women Olympic medalists, former women’s tennis champion and LGBTQ activist Martina Navratilova, Professor Doriane Coleman, a former All-American women’s track competitor, transgender athletes Joanna Harper and Dr. Renee Richards, and many other leaders in women’s sports and civil rights. I have referenced other published work of Joanna Harper and Professor Coleman. In early 2021 the Women’s Sports Policy Working Group published a “Briefing Book” on the issue of transgender participation in women’s sports,<sup>13</sup> in which they reviewed largely the same body of literature I have reviewed above, and analyzed the implications of that science for fairness and safety in women’s sports.

170. Among other things, the Women’s Sports Policy Working Group concluded:

---

<sup>13</sup> <https://womenssportspolicy.org/wp-content/uploads/2021/02/Congressional-Briefing-WSPWG-Transgender-Women-Sports-2.27.21.pdf>

- “[T]he evidence is increasingly clear that hormones do not eliminate the legacy advantages associated with male physical development” (8) due to “the considerable size and strength advantages that remain even after hormone treatments or surgical procedures.” (17)
- “[T]here is convincing evidence that, depending on the task, skill, sport, or event, trans women maintain male sex-linked (legacy) advantages even after a year on standard gender-affirming hormone treatment.” (26, citing Roberts 2020.)
- “[S]everal peer-reviewed studies, including one based on data from the U.S. military, have confirmed that trans women retain their male sex-linked advantages even after a year on gender affirming hormones. . . . Because of these retained advantages, USA Powerlifting and World Rugby have recently concluded that it isn't possible fairly and safely to include trans women in women's competition.” (32)

171. As has been widely reported, in 2020, after an extensive scientific consultation process, the **World Rugby** organization issued its Transgender Guidelines, finding that it would not be consistent with fairness or safety to permit biological males to compete in World Rugby women's matches, no matter what hormonal or surgical procedures they might have undergone. Based on their review of the science, World Rugby concluded:

- “Current policies regulating the inclusion of transgender women in sport are based on the premise that reducing testosterone to levels found in biological females is sufficient to remove many of the biologically-based performance advantages described above. However, peer-reviewed evidence suggests that this is not the case.”
- “Longitudinal research studies on the effect of reducing testosterone to female levels for periods of 12 months or more do not support the contention that variables such as mass, lean mass and strength are altered meaningfully in comparison to the original male-female differences in these variables. The lowering of testosterone removes only a small proportion of the documented biological differences, with large, retained advantages in these physiological attributes, with the safety and performance implications described previously.”
- “. . . given the size of the biological differences prior to testosterone suppression, this comparatively small effect of testosterone reduction allows substantial and meaningful differences to remain. This has significant implications for the risk of injury . . . .”

- “. . . bone mass is typically maintained in transgender women over the course of at least 24 months of testosterone suppression, . . . . Height and other skeletal measurements such as bone length and hip width have also not been shown to change with testosterone suppression, and nor is there any plausible biological mechanism by which this might occur, and so sporting advantages due to skeletal differences between males and females appear unlikely to change with testosterone reduction.

172. In September 2021 the government-commissioned Sports Councils of the United Kingdom and its subsidiary parts (the five Sports Councils responsible for supporting and investing in sport across England, Wales, Scotland and Northern Ireland) issued a formal “Guidance for Transgender Inclusion in Domestic Sport” (UK Sport Councils 2021), following an extensive consultation process, and a commissioned “International Research Literature Review” prepared by the Carbmill Consulting group (UK Sport Literature Review 2021). The UK Sport Literature Review identified largely the same relevant literature that I review in this paper, characterizes that literature consistently with my own reading and description, and based on that science reaches conclusions similar to mine.

173. The UK Sport Literature Review 2021 concluded:

- “Sexual dimorphism in relation to sport is significant and the most important determinant of sporting capacity. The challenge to sporting bodies is most evident in the inclusion of transgender people in female sport.” “[The] evidence suggests that parity in physical performance in relation to gender-affected sport cannot be achieved for transgender people in female sport through testosterone suppression. Theoretical estimation in contact and collision sport indicate injury risk is likely to be increased for female competitors.” (10)
- “From the synthesis of current research, the understanding is that testosterone suppression for the mandated one year before competition will result in little or no change to the anatomical differences between the sexes, and a more complete reversal of some acute phase metabolic pathways such as haemoglobin levels although the impact on running performance appears limited, and a modest change in muscle mass and strength: The average of around 5% loss of muscle mass and strength will not reverse the average 40-50% difference in strength that typically exists between the two sexes.” (7)
- “These findings are at odds with the accepted intention of current policy in sport, in which twelve months of testosterone suppression is

expected to create equivalence between transgender women and females.” (7)

174. Taking into account the science detailed in the UK Sport Literature Review 2021, the UK Sports Councils have concluded:

- “[T]he latest research, evidence and studies made clear that there are retained differences in strength, stamina and physique between the average woman compared with the average transgender woman or non-binary person registered male at birth, with or without testosterone suppression.” (3)
- “Competitive fairness cannot be reconciled with self-identification into the female category in gender-affected sport.” (7)
- “As a result of what the review found, the Guidance concludes that the inclusion of transgender people into female sport cannot be balanced regarding transgender inclusion, fairness and safety in gender-affected sport where there is meaningful competition. This is due to retained differences in strength, stamina and physique between the average woman compared with the average transgender woman or non-binary person assigned male at birth, with or without testosterone suppression.” (6)
- “Based upon current evidence, testosterone suppression is unlikely to guarantee fairness between transgender women and natal females in gender-affected sports. . . . Transgender women are on average likely to retain physical advantage in terms of physique, stamina, and strength. Such physical differences will also impact safety parameters in sports which are combat, collision or contact in nature.” (7)

175. On January 15, 2022 the American Swimming Coaches Association (ASCA) issued a statement stating, “The American Swimming Coaches Association urges the NCAA and all governing bodies to work quickly to update their policies and rules to maintain fair competition in the women’s category of swimming. ASCA supports following all available science and evidenced-based research in setting the new policies, and we strongly advocate for more research to be conducted” and further stated “The current NCAA policy regarding when transgender females can compete in the women’s category can be unfair to cisgender females and needs to be reviewed and changed in a transparent manner.” (<https://swimswam.com/asca-issues-statement-calling-for-ncaa-to-review-transgender-rules/>; Accessed January 16, 2022.)

176. On January 19, 2022, the NCAA Board of Governors approved a change to the policy on transgender inclusion in sport and stated that “...the updated NCAA policy calls for transgender participation for each sport to be determined by the policy for the national governing body of that sport, subject to ongoing review and recommendation by the NCAA Committee on Competitive Safeguards and Medical Aspects of Sports to the Board of Governors. If there is no N[ational]G[overning]B[ody] policy for a sport, that sport's international federation policy would be followed. If there is no international federation policy, previously established IOC policy criteria would be followed” (<https://www.ncaa.org/news/2022/1/19/media-center-board-of-governors-updates-transgender-participation-policy.aspx>; Accessed January 20, 2022.)

177. On February 1, 2022, because “...a competitive difference in the male and female categories and the disadvantages this presents in elite head-to-head competition ... supported by statistical data that shows that the top-ranked female in 2021, on average, would be ranked 536th across all short course yards (25 yards) male events in the country and 326th across all long course meters (50 meters) male events in the country, among USA Swimming members,” USA Swimming released its Athlete Inclusion, Competitive Equity and Eligibility Policy. The policy is intended to “provide a level-playing field for elite cisgender women, and to mitigate the advantages associated with male puberty and physiology.” (USA Swimming Releases Athlete Inclusion, Competitive Equity and Eligibility Policy, available at <https://www.usaswimming.org/news/2022/02/01/usa-swimming-releases-athlete-inclusion-competitive-equity-and-eligibility-policy>.) The policy states:

- For biologically male athletes seeking to compete in the female category in certain “elite” level events, the athlete has the burden of demonstrating to a panel of independent medical experts that:
  - o “From a medical perspective, the prior physical development of the athlete as Male, as mitigated by any medical intervention, does not give the athlete a competitive advantage over the athlete’s cisgender Female competitors” and
  - o There is a presumption that the athlete is not eligible unless the athlete “demonstrates that the concentration of testosterone in the athlete’s serum has been less than 5 nmol/L . . . continuously for a period of at least thirty-six (36) months before the date of the Application.” This presumption may be rebutted “if the Panel finds, in the unique circumstances of the case, that [the athlete’s prior physical development does not give the athlete a competitive advantage] notwithstanding the athlete’s serum testosterone results (e.g., the athlete has a medical condition

which limits bioavailability of the athlete's free testosterone)." (USA Swimming Athlete Inclusion Procedures at 43.)

### Conclusions

The research and actual observed data show the following:

- At the level of (a) elite, (b) collegiate, (c) scholastic, and (d) recreational competition, men, adolescent boys, or male children, have an advantage over equally gifted, aged and trained women, adolescent girls, or female children in almost all athletic events;
- Biological male physiology is the basis for the performance advantage that men, adolescent boys, or male children have over women, adolescent girls, or female children in almost all athletic events; and
- The administration of androgen inhibitors and cross-sex hormones to men or adolescent boys after the onset of male puberty does not eliminate the performance advantage that men and adolescent boys have over women and adolescent girls in almost all athletic events. Likewise, there is no published scientific evidence that the administration of puberty blockers to males before puberty eliminates the pre-existing athletic advantage that prepubertal males have over prepubertal females in almost all athletic events.

For over a decade sports governing bodies (such as the IOC and NCAA) have wrestled with the question of transgender inclusion in female sports. The previous policies implemented by these sporting bodies had an underlying "premise that reducing testosterone to levels found in biological females is sufficient to remove many of the biologically-based performance advantages." (World Rugby 2020 at 13.) Disagreements centered around what the appropriate threshold for testosterone levels must be—whether the 10nmol/liter value adopted by the IOC in 2015, or the 5nmol/liter value adopted by the IAAF.

But the science that has become available within just the last few years contradicts that premise. Instead, as the UK Sports Councils, World Rugby, the FIMS Consensus Statement, and the Women's Sports Policy Working Group have all recognized the science is now sharply "at odds with the accepted intention of current policy in sport, in which twelve months of testosterone suppression is expected to create equivalence between transgender women and females" (UK Sports Literature Review 2021 at 7), and it is now "difficult to suggest that the athletic capabilities of transwomen individuals undergoing HRT or GAS are comparable to those of cisgender women." (Hamilton, FIMS Consensus Statement 2021.) It is important to note that while the 2021 "IOC Framework on Fairness,

Inclusion, and Non-Discrimination on the Basis of Gender Identity and Sex Variations” calls for an “evidence-based approach,” that Framework does not actually reference *any* of the now extensive scientific evidence relating to the physiological differences between the sexes, and the inefficacy of hormonal intervention to eliminate male advantages relevant to most sports. Instead, the IOC calls on other sporting bodies to define criteria for transgender inclusion, while demanding that such criteria simultaneously ensure fairness, safety, and inclusion for all. The recently updated NCAA policy on transgender participation also relies on other sporting bodies to establish criteria for transgender inclusion while calling for fair competition and safety.

But what we currently know tells us that these policy goals—fairness, safety, and full transgender inclusion—are irreconcilable for many or most sports. Long human experience is now joined by large numbers of research papers that document that males outperform females in muscle strength, muscular endurance, aerobic and anaerobic power output, VO<sub>2</sub>max, running speed, swimming speed, vertical jump height, reaction time, and most other measures of physical fitness and physical performance that are essential for athletic success. The male advantages have been observed in fitness testing in children as young as 3 years old, with the male advantages increasing immensely during puberty. To ignore what we know to be true about males’ athletic advantages over females, based on mere hope or speculation that cross sex hormone therapy (puberty blockers, androgen inhibitors, or cross-sex hormones) might neutralize that advantage, when the currently available evidence says it does not, is not science and is not “evidence-based” policy-making.

Because of the recent research and analysis in the general field of transgender athletics, many sports organizations have revised their policies or are in the process of doing so. As a result, there is not any universally recognized policy among sports organizations, and transgender inclusion policies are in a state of flux, likely because of the increasing awareness that the goals of fairness, safety, and full transgender inclusion are irreconcilable.

Sports have been separated by sex for the purposes of safety and fairness for a considerable number of years. The values of safety and fairness are endorsed by numerous sports bodies, including the NCAA and IOC. The existing evidence of durable physiological and performance differences based on biological sex provides a strong evidence-based rationale for keeping rules and policies for such sex-based separation in place (or implementing them as the case may be).

As set forth in detail in this report, there are physiological differences between males and females that result in males having a significant performance advantage over similarly gifted, aged, and trained females in nearly all athletic events before, during, and after puberty. There is not scientific evidence that any

G. Brown

Expert Report, B.P.J. v. WV BOE et al.

amount or duration of cross sex hormone therapy (puberty blockers, androgen inhibitors, or cross-sex hormones) eliminates all physiological advantages that result in males performing better than females in nearly all athletic events. Males who have received such therapy retain sufficient male physiological traits that enhance athletic performance vis-à-vis similarly aged females and are thus, from a physiological perspective, more accurately categorized as male and not female.

## INTRODUCTION

Up to the present, the great majority of news, debate, and even scholarship about transgender participation in female athletics has focused on track and field events and athletes, and the debate has largely concerned questions of fairness and inclusion. However, the transgender eligibility policies of many high school athletic associations in the United States apply with equal force to all sports, including sports in which players frequently collide with each other, or can be forcefully struck by balls or equipment such as hockey or lacrosse sticks. And in fact, biologically male transgender athletes have competed in a wide range of high school, collegiate, and professional girls' or women's sports, including, at least, basketball,<sup>1</sup> soccer,<sup>2</sup> volleyball,<sup>3</sup> softball,<sup>4</sup> lacrosse,<sup>5</sup> and even women's tackle football.<sup>6</sup>

The science of sex-specific differences in physiology, intersecting with the physics of sports injury, leaves little doubt that participation by biological males in these types of girls' or women's sports, based on gender identity, creates significant additional risk of injury for the biologically female participants competing alongside these transgender athletes.

In 2020, after an extensive review of the scientific literature, consultation with experts, and modeling of expected injuries, World Rugby published revised rules governing transgender participation, along with a detailed explanation of how the new policy was supported by current evidence. World Rugby concluded that “there is currently no basis with which safety and fairness can be assured to biologically female rugby players should they encounter contact situations with players whose biological male advantages persist to a large degree,” and that after puberty, “the lowering of testosterone removes only a small proportion of the documented biological differences.” Hence, World Rugby concluded that biological men should not compete in women's rugby. (World Rugby Transgender Women Guidelines 2020.) World Rugby has been criticized by some for its new guidelines, but those criticisms have often avoided discussions of medical science entirely, or have asserted that modeling scenarios can overstate true risk. What cannot be denied, however, is that World Rugby's approach is evidence-based, and rooted in concern for athlete safety. As a medical doctor who has spent my career in sports medicine, it is my opinion that World Rugby's assessment of the evidence is scientifically sound, and that injury modeling

meaningfully predicts that biologically male transgender athletes do constitute a safety risk for the biologically female athlete in women's sports.

In a similar vein, in 2021, the UK Sports Councils' Equality Group released new guidance for transgender inclusion in organized sports. This guidance was formulated after extensive conversations with stakeholders, a review of scientific findings related to transgender athletes in sport through early 2021, and an assessment of the use by some sport national governing bodies of case-by-case assessment to determine eligibility. Noteworthy within these stakeholder consultations was a lack of consensus on any workable solution, as well as concerns related to athlete safety and "adherence to rules which give sport validity." The Literature Review accompanying the guidance document further noted that "[t]here are significant differences between the sexes which render direct competition between males and females . . . unsafe in sports which allow physical contact and collisions." (UK Sports Councils' Equality Group Literature Review 2021 at 1.) Their review of the science "made clear that there are retained differences in strength, stamina and physique between the average woman compared with the average transgender woman....with or without testosterone suppression." (UK Sports Councils' Equality Group Guidance at 3.) This was also reflected in their ten guiding principles, stating that physical differences between the sexes will "impact safety parameters in sports which are combat, collision or contact in nature." (UK Sports Councils' Equality Group Guidance 2021 at 7.) Ultimately, UK Sport

concluded that the full inclusion of transgender athletes in women's sports "cannot be reconciled within the current structure of sport," stating that "the inclusion of transgender people into female sport cannot be balanced regarding transgender inclusion, fairness and safety in gender-affected sport where there is meaningful competition . . . . due to retained differences in strength, stamina and physique between the average woman compared with the average transgender woman..., with or without testosterone suppression." (UK Sports Councils' Equality Group Guidance 2021 at 6.) Finally, UK Sport affirmed the use of sex categorization in sport, along with age and disability, as important for the maintenance of safety and fairness. (UK Sports Councils' Equality Group Guidance 2021 at 7-8.)

Unfortunately, apart from World Rugby's careful review and the recent release of UK Sports Councils' guidance, the public discourse is lacking any careful consideration of the question of safety. As a physician who has spent my career caring for athletes, I find this silence about safety both surprising and concerning. It is my hope through this white paper to equip and motivate sports leagues and policy makers to give adequate attention to the issue of safety for female athletes when transgender policies are being considered. I first explain the nature and causes of common sports injuries. I then review physiological differences between male and female bodies that affect the risk and severity of injuries to females when biological males compete in the female category, and

explain why testosterone suppression does not eliminate these heightened risks to females. Finally, I explain certain conclusions about those risks.

### **CREDENTIALS**

1. I am a medical doctor practicing Sports Medicine, maintaining an active clinical practice at Stadia Sports Medicine in West Des Moines, Iowa. I received my M.D. from the University of Nebraska College of Medicine in 1994 and completed a residency in family medicine at the University of Michigan in 1997.

2. Following my time in Ann Arbor, I matched to a fellowship in Sports Medicine at Ball Memorial Hospital in Muncie, Indiana, training from 1997 to 1999, with clinical time split between Central Indiana Orthopedics, the Ball State Human Performance Laboratory, and the Ball State University training room. I received my board certification in Sports Medicine in 1999, which I continue to hold. Since residency training, my practice has focused on Sports Medicine—the treatment and prevention of injuries related to sport and physical activity.

3. Since 1997, I have served in several clinical practices and settings as a treating physician, including time as team physician for both the University of Illinois and Ball State University, where I provided care to athletes in several sports, including football, ice hockey, basketball, field hockey, softball, gymnastics, soccer, and volleyball. In the course of my career, I have provided coverage for NCAA Power Five Conference championships and NCAA National

Championship events in basketball, field hockey and gymnastics, among other sports, as well as provided coverage for national championship events for U.S.A. gymnastics, and U.S. Swimming and Diving. I have also covered professional soccer in Des Moines.

4. Since 2006, I have been the physician owner of Stadia Sports Medicine in West Des Moines, Iowa. My practice focuses on treatment of sports and activity-related injury, including concussive injury, as well as problems related to the physiology of sport.

5. I have served in and provided leadership for several professional organizations over the course of my career. In 2004, I was designated a Fellow of the American College of Sports Medicine (ACSM). I have served on ACSM's Health and Science Policy Committee since 2010, and for a time chaired their Clinical Medicine Subcommittee. From 2009 to 2013, I served two elected terms on the Board of Directors of the American Medical Society for Sports Medicine (AMSSM), and during that time served as Chair of that body's Practice and Policy Committee. I was subsequently elected to a four-year term on AMSSM's executive committee in 2017, and from 2019-20, I served as AMSSM's President. AMSSM is the largest organization of sports medicine physicians in the world. I gained fellowship status through AMSSM in 2020—my first year of eligibility. My work for ACSM and AMSSM has brought with it extensive experience in public policy as relates to Sports Medicine.

6. In 2020, I was named as AMSSM's first board delegate to the newly-constituted Physical Activity Alliance. I am a named member of an NCAA advisory group on COVID-19, through which I provided input regarding the cancellation of the basketball tournament in 2020. I also serve as a member of the Iowa Medical Society's Sports Medicine Subcommittee and have been asked to serve on the Iowa High School Athletic Association's newly-forming Sports Medicine Advisory Committee.

7. I have served as a manuscript reviewer for organizational policy pronouncements, and for several professional publications, most recently a sports medicine board review book just published in 2021. I have published several articles on topics related to musculoskeletal injuries in sports and rehabilitation, which have been published in peer-reviewed journals such as Clinical Journal of Sports Medicine, British Journal of Sports Medicine, Current Reviews in Musculoskeletal Medicine, Athletic Therapy Today, and the Journal of Athletic Training. In conjunction with my work in policy advocacy, I have helped write several pieces of legislation, including the initial draft of what became the Sports Medicine Licensure Clarity Act, signed into law by President Trump in 2018, which eases the restrictions on certain practitioners to provide health services to athletes and athletic teams outside of the practitioner's home state. A list of my publications over the past ten (10) years is included as an appendix to this report.

8. In the past four years, I have not testified as an expert witness in a deposition or at trial.

9. I am being compensated for my services as an expert witness in this case at the rates of \$650 per hour for consultation, \$800 per hour for deposition testimony, and \$3,500 per half-day of trial testimony.

## I. OVERVIEW

10. In this statement, I offer information and my own professional opinion on the potential for increased injury risk to females in sports when they compete against biologically male transgender athletes.<sup>7</sup> At many points in this statement, I provide citations to published, peer-reviewed articles that provide relevant and supporting information to the points I make.

11. The principal conclusions that I set out in this white paper are as follows:

- a. Government and sporting organizations have historically considered the preservation of athlete safety as one component of competitive equity.
- b. Injury in sport is somewhat predictable based on modeling assumptions that take into account relevant internal and external risk factors.

---

<sup>7</sup> In the body of this paper, I use the terms “male” and “female” according to their ordinary medical meaning—that is to say, to refer to the two biological sexes. I also use the word “man” to refer to a biologically male human, and “woman” to refer to a biologically female human. In the context of this opinion, I include in these categories non-syndromic, biologically-normal males and females who identify as a member of the opposite sex, including those who use endogenous hormone suppression to alter their body habitus. In contexts that are not focused on questions of biology and physiology, terms of gender are sometimes used to refer to subjective identities rather than to biological categories – something I avoid for purposes of a paper focused on sports science

c. Males exhibit large average advantages in size, weight, and physical capacity over females—often falling far outside female ranges. Even before puberty, males have a performance advantage over females in most athletic events. Failure to preserve protected female-only categories in contact sports (broadly defined) will ultimately increase both the frequency and severity of injury suffered by female athletes who share playing space with these males.

d. Current research supports the conclusion that suppression of testosterone levels by males who have already begun puberty will not fully reverse the effects of testosterone on skeletal size, strength, or muscle hypertrophy, leading to persistence of sex-based differences in power, speed, and force-generating capacity.

12. In this white paper, I use the term “contact sports” to refer broadly to all sports in which collisions between players, or collisions between equipment such as a stick or ball and the body of a player, occur with some frequency (whether or not permitted by the rules of the game), and are well recognized in the field of sports medicine as causes of sport-related injuries.<sup>8</sup> The 1975 Title IX implementing regulations (34 CFR § 106.41) say that “for purposes of this [regulation] contact sports include boxing, wrestling, rugby, ice hockey, football, basketball, *and other sports* the purpose or major activity of which involves bodily contact.” Certainly, all of the sports specifically named in the regulation fall within my definition of “contact sport.” Mixed martial arts, field hockey (Barboza 2018), soccer (Kuczinski 2018), rugby (Viviers 2018), lacrosse

---

<sup>8</sup> It is common to see, within the medical literature, reference to distinctions between “contact” and “collision” sports. For purposes of clarity, I have combined these terms, since in the context of injury risk modeling, there is no practical distinction between them.

(Pierpoint 2019), volleyball,<sup>9</sup> baseball, and softball also involve collisions that can and do result in injuries, and so also fall within my definition.

## **II. A BRIEF HISTORY OF THE RATIONALE FOR SEPARATION OF SPORT BY SEX**

13. World Rugby is correct when it notes that “the women’s category exists to ensure protection, safety, and equality” for women. (World Rugby Transgender Women Guidelines 2020.) To some extent, those in charge of sport governing bodies in the modern era have always recognized the importance of grouping athletes together based on physical attributes, in order to ensure both safety and competitive balance. Weight classifications have existed in wrestling since it reappeared as an Olympic event in 1904. Women and men have participated in separate categories since the advent of intercollegiate sporting clubs early in the 20<sup>th</sup> century. When Title IX went into effect in 1975, there were just under 300,000 female high school athletes, and fewer than 10,000 female collegiate athletes. With the changes that resulted from Title IX, it was assumed that newly-available funds for women in sport would ensure the maintenance of existing, or creation of new, sex-segregated athletic teams that would foster greater participation by women. This has been borne out subsequently; by the first half of the 1980’s these numbers had risen to 1.9 million and nearly 100,000 respectively. (Hult 1989.)

---

<sup>9</sup> See <https://www.latimes.com/sports/story/2020-12-08/stanford-volleyball-hayley-hodson-concussions-cte-lawsuit>, and <https://volleyballmag.com/corinneatchison/> (both accessed 6/20/21).

14. The rationale for ongoing “separate but equal” status when it came to sex-segregated sports was made clear within the language of the original implementing regulations of Title IX , which, acknowledging real, biologically-driven differences between the sexes, created carve-out exceptions authorizing sex-separation of sport for reasons rooted in the maintenance of competitive equity. Importantly, the effect of these innate sex-based differences on the health and safety of the athlete were acknowledged by the express authorization of sex-separated teams for sports with higher perceived injury risk—i.e., “contact sports.” (Coleman 2020.)

15. In the almost half century since those regulations were adopted, the persistent reality of sex-determined differences in athletic performance and safety has been recognized by the ongoing and nearly universal segregation of men’s and women’s teams—even those that are not classically defined as being part of a contact or collision sport.

16. Now, however, many schools and sports leagues in this country are permitting males to compete in female athletics—including in contact sports—based on gender identity. In my view, these policies have been adopted without careful analysis of safety implications. Other researchers and clinicians have addressed questions of the negative impact of such policies on fairness, or equality of athletic experiences for girls and women, in published articles, and in court submissions. One recent review of track and field performances, including sprints, distance races and field events, noted that men surpass the

top female performance in each category between 1000 and 10,000 times *each year*, with hundreds or thousands of men beating the top women in each event. (Coleman & Shreve.) Although this was not their primary focus, World Rugby well-summarized the point when it observed that in a ranking list of the top thousand performances in most sports, every year, *every one* will have been achieved by a biological male. (World Rugby Transgender Women Guidelines 2020.) Although most easily documented in athletes who have gone through puberty, these differences are not exclusively limited to post-pubescent athletes either.

17. I have reviewed the expert declaration of Gregory A. Brown, Ph.D., FACM of February 23, 2022, provided in this case, which includes evidence from a wide variety of sources, including population-based mass testing data, as well as age-stratified competition results, all of which support the idea that prepubertal males run faster, jump higher and farther, exhibit higher aerobic power output, and have greater upper body strength (evidenced by stronger hand grip and better performance with chin-ups or bent arm hang) than comparably aged females. This performance gap is well-documented in population-based physiologic testing data that exists in databases such as the Presidential Fitness Test, the Eurofit Fitness test, and additional mass testing data from the UK and Australia. Collectively, this data reveals that pre-pubertal males outperform comparably aged females in a wide array of athletic tests including but not limited to the countermovement jump test, drop jump test, change of direction

test, long jump, timed sit-up test, the 10 X 5 meter shuttle run test, the 20 meter shuttle run test, curl-ups, pull-ups, push-ups, one mile run, standing broad jump, and bent arm hang test. Dr. Brown further references studies showing a significant difference in the body composition of males and females before puberty. In sum, a large and unbridgeable performance gap between the sexes is well-studied and equally well-documented, beginning in many cases before puberty. In this white paper, I focus on some of these differences as they touch on the question of athlete safety.

### **III. UNDERSTANDING THE CAUSES OF SPORTS INJURIES**

18. The causes for injury in sport are multifactorial. In recent decades, medical researchers have provided us an evolving understanding of how sports injuries occur, as well as the factors that make them more or less probable, and more or less severe. Broadly speaking, there are two ways of modeling injury: the epidemiological model, and the biomechanical model. These models are not mutually exclusive, but provide complementary conceptual frameworks to help us stratify risk in sport.

#### **A. The epidemiological model of injury**

19. From a practical standpoint, sports medicine researchers and clinicians often use the “epidemiological model” to explain, prevent and manage sports injuries. Broadly speaking, this model views an injury in sport as the product of internal and external risk factors, triggered by an inciting event. In other words, a given injury is “caused” by a number of different factors that are

unique to a given situation. (Meeuwise 1994.) When the interplay of these factors exceeds the injury threshold, injury occurs. One example of how this interplay might work would be a female distance runner in track who develops a tibial stress fracture, with identified risks of low estrogen state from amenorrhea (suppression of menses), an aggressive winter training program on an indoor tile surface, and shoes that have been used for too many miles, and are no longer providing proper shock absorption. Most risk factors ebb and flow, with the overall injury risk at any given time fluctuating as well. Proper attention to risk factor reduction *before* the start of the sports season (including appropriate rule-making) is the best way to reduce actual injury rates *during* the season.

20. As alluded to, the risk factors associated with injury can be broadly categorized as internal or external. Internal risk factors are internal to the athlete. These include relatively fixed variables, such as the athlete's age, biological sex, bone mineral density (which affects bone strength) and joint laxity, as well as more mutable variables such as body weight, fitness level, hydration state, current illness, prior injury, or psychosocial factors such as aggression.

21. External risk factors are, as the name suggests, external to the athlete. These include non-human risks such as the condition of the playing surface or equipment, athletic shoe wear, or environmental conditions. Other external risk factors come from opposing competitors, and include such

variables as player size, speed, aggressiveness, and overall adherence to the rules of the game. As already mentioned, these risks can be minimized through the proper creation and enforcement of rules, as well as the appropriate grouping of athletes together for purposes of competition. To the latter point, children don't play contact sports with adults and, in the great majority of cases, men and women compete in categories specific to their own biological sex. Certainly these categorical separations are motivated in part by average performance differences and considerations of fairness and opportunity. But they are also motivated by safety concerns. When properly applied, these divisions enhance safety because, when it comes to physical traits such as body size, weight, speed, muscle girth, and bone strength, although a certain amount of variability exists within each group, the averages and medians differ widely *between* the separated groups.<sup>10</sup>

22. Thus, each of these commonly utilized groupings of athletes represents a pool of individuals with predictable commonalities. Epidemiological risk assessment is somewhat predictable and translatable as long as these pools remain intact. But the introduction of outside individuals

---

<sup>10</sup> In some cases, safety requires even further division or exclusion. A welterweight boxer would not compete against a heavyweight, nor a heavyweight wrestle against a smaller athlete. In the case of youth sports, when children are at an age where growth rates can vary widely, leagues will accommodate for naturally-occurring large discrepancies in body size by limiting larger athletes from playing positions where their size and strength is likely to result in injury to smaller players. Thus, in youth football, players exceeding a certain weight threshold may be temporarily restricted to playing on the line and disallowed from carrying the ball, or playing in the defensive secondary, where they could impose high-velocity hits on smaller players.

into a given pool (e.g. an adult onto a youth football team, or males into most women's sports) would change the balance of risk inside that pool. Simply put, when you introduce larger, faster, and stronger athletes from one pool into a second pool of athletes who are *categorically* smaller (whether as a result of age or sex), you have altered the characteristics of the second pool, and, based on known injury modeling, have statistically increased the injury risk for the original athletes in that pool. This, in a nutshell, is the basis for World Rugby's recommendations.

23. Most clinical studies of the epidemiology of sports injuries use a multivariate approach, identifying multiple independent risk factors and examining how these factors might interact, in order to determine their relative contribution to injury risk, and make educated inferences about causation. (Meeuwise 1994.)

24. In applying the multivariate approach, the goal is to keep as many variables as possible the same so as to isolate the potential effect of a single variable (such as age or biological sex) on injury risk, as well as to determine how the isolated variable interacts with the other analyzed variables to affect injury risk. Failure to consider relevant independent variables can lead to error. Researchers focusing on differences between male and female athletes, for example, would not compare concussion rates of a high school girls' soccer team to concussion rates of a professional men's soccer team, because differences in the concussion rate might be due to a number of factors besides sex, such as age,

body mass, relative differences in skill, speed, or power, as well as differences in training volume and intensity.

25. As indicated earlier, an injury event is usually the end product of a number of different risk factors coming together. (Bahr 2005.) A collision between two soccer players who both attempt to head the ball, for example, might be the inciting event that causes a concussion. Although the linear and angular forces that occur through sudden deceleration would be the proximate cause of this injury, the epidemiological model of injury would also factor in “upstream” risks, predicting the possibility of an injury outcome for each athlete differently depending on the sum of these risks. If the collision injury described above occurs between two disparately-sized players, the smaller athlete will tend to decelerate more abruptly than the larger athlete, increasing the smaller athlete’s risk for injury. Additional discrepancies in factors such as neck strength, running speeds, and muscle force generation capacity all result in differing risks and thus, the potential for differing injury outcomes from the same collision. As I discuss later in this white paper, there are significant statistical differences between the sexes when it comes to each of these variables, meaning that in a collision sport where skeletally mature males and females are playing against one another, there is a higher statistical likelihood that injury will result when collisions occur, and in particular there is a higher likelihood that a female will suffer injury. This again is the basis for the recent decision by World Rugby to disallow the crossover of men into women’s rugby,

regardless of gender identity. (World Rugby Transgender Women Guidelines 2020.) The decision-making represented by this policy change is rational and rooted in objective facts and objective risks of harm, because it takes real, acknowledged, and documented physical differences between the sexes (in many cases before adolescence), and models expected injury risk on the basis of the known differences that persist even after hormone manipulation.

### **B. The biomechanical model of injury**

26. Sports medicine researchers and clinicians also consider a biomechanical approach when it comes to understanding sports injuries. In the biomechanical model of injury, injury is considered to be analogous to the failure of a machine or other structure. Every bone, muscle, or connective tissue structure in an athlete's body has a certain load tolerance. Conceptually, when an external "load" exceeds the load tolerance of a given structure in the human body, an injury occurs. (Fung 1993 at 1.) Thus, researchers focus on the mechanical load—the force exerted on a bone, ligament, joint or other body part—and the load tolerance of that impacted or stressed body part, to understand what the typical threshold for injury is, and how predictable this might be. (McIntosh 2005 at 2-3.) Biomechanical models of injury usually consider forces in isolation. The more consistent the movement pattern of an individual, and the fewer the contributions of unexpected outside forces to the athlete, the more accurate biomechanical predictions of injury will be.

27. Biomechanical modeling can be highly predictive in relatively simple settings. For example, in blunt trauma injury from falls, mortality predictably rises the greater the fall. About 50% of people who fall four stories will survive, while only 10% will survive a fall of seven stories. (Buckman 1991.) As complexity increases, predictability in turn decreases. In sport, the pitching motion is highly reproducible, and strain injury to the ulnar collateral ligament (UCL) of the elbow can be modeled. The load tolerance of the UCL of a pitcher's elbow is about 32 Newton-meters, but the failure threshold of a ligament like this in isolation is not the only determinant of whether injury will occur. During the pitching motion, the valgus force imparted to the elbow (gapping stress across the inner elbow that stretches the UCL) routinely reaches 64 Newtons, which is obviously greater than the failure threshold of the ligament. Since not all pitchers tear their UCLs, other variables innate to an athlete must mitigate force transmission to the ligament and reduce risk. The load tolerance of any particular part of an athlete's body is thus determined by other internal factors such as joint stiffness, total ligament support, muscle strength across the joint, or bone mineral density. Injury load can be self-generated, as in the case of a pitcher's elbow, or externally-generated, as in the case of a linebacker hitting a wide receiver. While load tolerance will vary by individual, as described above, and is often reliant on characteristics innate to a given athlete, external load is determined by outside factors such as the nature of the playing surface or

equipment used, in combination with the weight and speed of other players or objects (such as a batted ball) with which the player collides. (Bahr 2005.)

28. As this suggests, the two “models” of sports injuries described above are not in any sense inconsistent or in tension with each other. Instead, they are complementary ways of thinking about injuries that can provide different insights. But the important point to make regarding these models is that in either model, injury risk (or the threshold for injury) rises and falls depending on the size of an externally-applied force, and the ability of a given athlete to absorb or mitigate that force.

#### **IV. THE PHYSICS OF SPORTS INJURY**

29. Sports injuries often result from collisions between players, or between a player and a rapidly moving object (e.g. a ball or hockey puck, a lacrosse or hockey stick). In soccer, for example, most head injuries result from collisions with another player’s head or body, collision with the goal or ground, or from an unanticipated blow from a kicked ball. (Boden 1998; Mooney 2020.) In basketball, players often collide with each other during screens, while diving for a loose ball, or while driving to the basket. In lacrosse or field hockey, player-to-player, or player-to-stick contact is common.

30. But what are the results of those collisions on the human body? Basic principles of physics can cast light on this question from more than one angle. A general understanding of these principles can help us identify factors

that will predictably increase the relative risk, frequency, and severity of sports injuries, given certain assumptions.

31. First, we can consider **energy**. Every collision involves an object or objects that possess energy. The energy embodied in a moving object (whether a human body, a ball, or anything else) is called kinetic energy.

32. Importantly, the kinetic energy of a moving object is expressed as:  $E_k = \frac{1}{2}mv^2$ . That is, kinetic energy is a function of the mass of the object multiplied by the *square* of its velocity. (Dashnaw 2012.) To illustrate with a simple but extreme example: if athletes A and B are moving at the same speed, but athlete A is twice as heavy, athlete A carries twice as much kinetic energy as athlete B. If the two athletes weigh the same amount, but athlete A is going twice as fast, athlete A carries four times as much kinetic energy as athlete B. But as I have noted, the kinetic energy of a moving object is a function of the mass of the object multiplied by the square of its velocity. Thus, if athlete A is twice as heavy, and moving twice as fast, athlete A will carry eight times the kinetic energy of athlete B into a collision.<sup>11</sup>

33. The implication of this equation means that what appear to be relatively minor discrepancies in size and speed can result in major differences in energy imparted in a collision, to the point that more frequent and more severe injuries can occur. To use figures that correspond more closely to average

---

<sup>11</sup>  $2 \times 2^2 = 8$

differences between men and women, if Player M weighs only 20% more than Player F, and runs only 15% faster, Player M will bring *58% more kinetic energy* into a collision than Player F.<sup>12</sup>

34. The law of conservation of energy tells us that energy is never destroyed or “used up.” If kinetic energy is “lost” by one body in a collision, it is inevitably transferred to another body, or into a different form. In the case of collision between players, or between (e.g.) a ball and a player’s head, some of the energy “lost” by one player, or by the ball, may be transformed into (harmless) sound; some may result in an increase in the kinetic energy of the player who is struck (through acceleration, which I discuss below); but some of it may result in *deformation* of the player’s body—which, depending on its severity, may result in injury. Thus, the greater the kinetic energy brought into a collision, the greater the potential for injury, all other things being equal.

35. Alternately, we can consider force and *acceleration*, which is particularly relevant to concussion injuries.

36. Newton’s third law of motion tells us that when two players collide, their bodies experience equal and opposite forces at the point of impact.

37. Acceleration refers to the rate of change in speed (or velocity). When two athletes collide, their bodies necessarily accelerate (or decelerate) rapidly: stopping abruptly, bouncing back, or being deflected in a different

---

<sup>12</sup>  $1.2 \times (1.15)^2 = 1.587$

direction. Newton's second law of motion tells us that:  $\mathbf{F} = m\mathbf{a}$  (that is, force equals mass multiplied by acceleration). From this equation we see that when a larger and a smaller body collide, and (necessarily) experience equal and opposite forces, the smaller body (or smaller player, in sport) will experience more rapid acceleration. We observe this physical principle in action when we watch a bowling ball strike bowling pins: the heavy bowling ball only slightly changes its course and speed; the lighter pins go flying.

38. This same equation also tells us that if a given player's body or head is hit with a *larger* force (e.g., from a ball that has been thrown or hit faster), it will experience *greater* acceleration, everything else being equal.

39. Of course, sport is by definition somewhat chaotic, and forces are often not purely linear. Many collisions also involve angular velocities, with the production of rotational force, or torque. Torque can be thought of as force that causes rotation around a central point. A different but similar equation of Newtonian physics governs the principles involved.<sup>13</sup> Torque is relevant to injury in several ways. When torque is applied through joints in directions those joints are not able to accommodate, injury can occur. In addition, rotational force can cause different parts of the body to accelerate at different rates—in some cases, very rapid rates, also leading to injury. For example, a collision where the

---

<sup>13</sup> In this equation,  $\boldsymbol{\tau} = I\boldsymbol{\alpha}$ , torque equals moment of inertia multiplied by angular acceleration, where "moment of inertia" is defined as  $I = mr^2$ , that is, mass multiplied by the square of the distance to the rotational axis.

body is impacted at the waist can result in high torque and acceleration on the neck and head.

40. Sport-related concussion—a common sports injury and one with potentially significant effects—is attributable to linear, angular, or rotational acceleration and deceleration forces that result from impact to the head, or from an impact to the body that results in a whiplash “snap” of the head. (Rowson 2016.) In the case of a concussive head injury, it is the brain that accelerates or decelerates on impact, colliding with the inner surface of the skull. (Barth 2001 at 255.)

41. None of this is mysterious: each of us, if we had to choose between being hit either by a large, heavy athlete running at full speed, or by a small, lighter athlete, would intuitively choose collision with the small, light athlete as the lesser of the two evils. And we would be right. One author referred to the “increase in kinetic energy, and therefore imparted forces” resulting from collision with larger, faster players as “profound.” (Dashnaw 2012.)

## **V. GENDER DIFFERENCES RELEVANT TO INJURY**

42. It is important to state up front that it is self-evident to most people familiar with sport and sport injuries that if men and women were to consistently participate together in competitive contact sports, there would be higher rates of injury in women. This is one reason that rule modifications often

exist in leagues where co-ed participation occurs.<sup>14</sup> Understanding the physics of sports injuries helps provide a theoretical framework for why this is true, but so does common sense and experience. All of us are familiar with basic objective physiological differences between the sexes, some of which exist in childhood, and some of which become apparent after the onset of puberty, and persist throughout adulthood. And as a result of personal experience, all of us also have some intuitive sense of what types of collisions are likely to cause pain or injury. Not surprisingly, our “common sense” on these basic facts about the human condition is also consistent with the observations of medical science. Below, I provide quantifications of some of these well-known differences between the sexes that are relevant to injury risk, as well as some categorical differences that may be less well known.

#### **A. Height and weight**

43. It is an inescapable fact of the human species that males as a group are statistically larger and heavier than females. On average, men are 7% to 8% taller than women. (Handelsman 2018 at 818.) According to the most recently available Centers for Disease Control and Prevention (CDC) statistics, the weight of the average U.S. adult male is 16% greater than that of the average U.S. adult female. (CDC 2018.) This disparity persists into the athletic cohort.

---

<sup>14</sup> For example, see <https://www.athleticbusiness.com/college/intramural-coed-basketball-playing-rules-vary-greatly.html> (detailing variety of rule modifications applied in co-ed basketball). Similarly, coed soccer leagues often prohibit so-called “slide tackles,” which are not prohibited in either men’s or women’s soccer. See, e.g., <http://www.premiercoedsports.com/pages/rulesandpolicies/soccer>.

Researchers find that while athletes tend on average to be lighter than non-athletes, the weight difference between the average adult male and female athlete remains within the same range—between 14% and 23%, depending on the sport analyzed. (Santos 2014; Fields 2018.) Indeed, World Rugby estimates that the typical male rugby player weighs 20% to 40% more than the typical female rugby player. (World Rugby Transgender Women Guidelines 2020.) This size advantage by itself allows men to bring more force to bear in a collision.

**B. Bone and connective tissue strength**

44. Men have bones in their arms, legs, feet, and hands that are both larger and stronger per unit volume than those of women, due to greater cross-sectional area, greater bone mineral content, and greater bone density. The advantage in bone size (cross-sectional area) holds true in both upper and lower extremities, even when adjusted for lean body mass. (Handelsman 2018 at 818; Nieves 2005 at 530.) Greater bone size in men is also correlated with stronger tendons that are more adaptable to training (Magnusson 2007), and an increased ability to withstand the forces produced by larger muscles (Morris 2020 at 5). Male bones are not merely larger, they are stronger per unit of volume. Studies of differences in arm and leg bone mineral density – one component of bone strength – find that male bones are denser, with measured advantages of between 5% and 14%. (Gilsanz 2011; Nieves 2005.)

46. When it comes to acceleration from a static position to a sprint, men are consistently faster than women. World record sprint performance gaps between the sexes remain significant at between 7% and 10.5%, with world record times in women now exhibiting a plateau (no longer rapidly improving with time) similar to the historical trends seen in men. (Cheuvront 2005.) This performance gap has to do with, among other factors, increased skeletal stiffness, greater cross-sectional muscle area, denser muscle fiber composition and greater limb length. (Handelsman 2018.) Collectively, males, on average, run about 10% faster than females. (Lombardo 2018 at 93.) This becomes important as it pertains to injury risk, because males involved in sport will often be travelling at faster speeds than their female counterparts in comparable settings, with resultant faster speed at impact, and thus greater impact force, in a given collision.

47. In 2014, a male mixed-martial art fighter identifying as female and fighting under the name Fallon Fox fought a woman named Tamikka Brents, and caused significant facial injuries in the course of their bout. Speaking about their fight later, Brents said:

“I’ve fought a lot of women and have never felt the strength that I felt in a fight as I did that night. I can’t answer whether it’s because she was born a man or not because I’m not a doctor. I can only say, I’ve never felt so overpowered ever in my life, and I am an abnormally strong female in my own right.”<sup>15</sup>

48. So far as I am aware, mixed martial arts is not a collegiate or high school interscholastic sport. Nevertheless, what Brent experienced in an extreme setting is true and relevant to safety in all sports that involve contact. In absolute terms, males as a group are substantially stronger than women.

49. Compared to women, men have “larger and denser muscle mass, and stiffer connective tissue, with associated capacity to exert greater muscular force more rapidly and efficiently.” (Hilton 2021 at 201.) Research shows that on average, during the prime athletic years (ages 18-29) men have, on average, 54% greater total muscle mass than women (33.7 kg vs. 21.8 kg) including 64% greater muscle mass in the upper body, and 47% greater in the lower body. (Janssen 2000 at Table 1.) The cross-sectional area of muscle in women is only 50% to 60% that of men in the upper arm, and 65% to 70% of that of men in the thigh. This translates to women having only 50% to 60% of men's upper limb strength and 60% to 80% of men's lower limb strength. (Handelsman 2018 at 812.) Male weightlifters have been shown to be approximately 30% stronger than female weightlifters of equivalent stature and mass. (Hilton 2021 at 203.) But in competitive athletics, since the stature and mass of the average male

---

<sup>15</sup> <https://bjj-world.com/transgender-mma-fighter-fallon-fox-breaks-skull-of-her-female-opponent/>

exceeds that of the average female, actual differences in strength between average body types will, on average, exceed this. The longer limb lengths of males augment strength as well. Statistically, in comparison with women, men also have lower total body fat, differently distributed, and greater lean muscle mass, which increases their power-to-weight ratios and upper-to-lower limb strength ratios as a group. Looking at another common metric of strength, males average 57% greater grip strength (Bohannon 2019) and 54% greater knee extension torque (Neder 1999). Research shows that sex-based discrepancies in lean muscle mass begin to be established from infancy, and persist through childhood to adolescence. (Davis 2019; Kirchengast 2001; Taylor 1997; Taylor 2010; McManus 2011.)

50. Using their legs and torso for power generation, men can apply substantially larger forces with their arms and upper body, enabling them to generate more ball velocity through overhead motions, as well as to generate more pushing or punching power. In other words, isolated sex-specific differences in muscle strength in one region (even differences that in isolation seem small) can, and do combine to generate even greater sex-specific differences in more complex sport-specific functions. One study looking at moderately-trained individuals found that males can generate 162% more punching power than females. (Morris 2020.) Thus, multiple small advantages aggregate into larger ones.

### E. Throwing and kicking speed

51. One result of the combined effects of these sex-determined differences in skeletal structure is that men are, on average, able to throw objects faster than women. (Lombardo 2018; Chu 2009; Thomas 1985.) By age seventeen, the *average* male can throw a ball farther than 99% of seventeen-year-old females—which necessarily means at a faster initial speed assuming a similar angle of release— despite the fact that factors such as arm length, muscle mass, and joint stiffness individually don’t come close to exhibiting this degree of sex-defined advantage. One study of elite male and female baseball pitchers showed that men throw baseballs 35% faster than women—81 miles/hour for men vs. 60 miles/hour for women. The authors of this study attribute this to a sex-specific difference in the ability to generate muscle torque and power. (Chu 2009.) A study showing greater throwing velocity in male versus female handball players attributed it to differences in body size, including height, muscle mass, and arm length. (Van Den Tillaar 2012.) Interestingly, significant sex-related difference in throwing ability has been shown to manifest even before puberty, but the difference increases rapidly during and after puberty. (Thomas 1985 at 266.) These sex-determined differences in throwing speed are not limited to sports where a ball is thrown. Males have repeatedly been shown to throw a javelin more than 30% farther than females. (Lombardo 2018 Table 2; Hilton 2021 at 203.) Even in preadolescent children, differences exist. International youth records for 5- to

12-year-olds in the javelin show 34-55% greater distance in males vs. females using a 400g javelin.<sup>16</sup>

52. Men also serve and spike volleyballs with higher velocity than women, with a performance advantage in the range of 29-34%. (Hilton 2021.) Analysis of first and second tier Belgian national elite male volleyball players shows ball spike speeds of 63 mph and 56 mph respectively. (Forthomme 2005.) NCAA Division I female volleyball players—roughly comparable to the second-tier male elite group referenced above—average a ball spike velocity of approximately 40 mph (18.1 m/s). (Ferris 1995 at Table 2.) Notably, based on the measurements of these studies, male spiking speed in *lower* elite divisions is almost 40% greater than that of NCAA Division I female collegiate players. Separate analyses of serving speed between elite men and women Spanish volleyball players showed that the average power serving speed in men was 54.6 mph (range 45.3–64.6 mph), with maximal speed of 76.4 mph. In women, average power serving speed was 49 mph (range 41–55.3 mph) with maximal speed of 59 mph. This translates to an almost 30% advantage in maximal serve velocity in men. (Palao 2014.)

53. Recall that kinetic energy is dependent on mass and the square of velocity. A volleyball (with fixed mass) struck by a male, and traveling an

---

<sup>16</sup> <http://age-records.125mb.com/>.

average 35% faster than one struck by a female, will deliver 82% more energy to a head upon impact.

54. The greater leg strength and jumping ability of men confer a further large advantage in volleyball that is relevant to injury risk. In volleyball, an “attack jump” is a jump to position a player to spike the ball downward over the net against the opposing team. Research on elite national volleyball players found that on average, males exhibited a 50% greater vertical jump height during an “attack” than did females. (Sattler 2015.) Similar data looking at countermovement jumps (to block a shot) in national basketball players reveals a 35% male advantage in jump height. (Kellis 1999.) In volleyball, this dramatic difference in jump height means that male players who are competing in female divisions will more often be able to successfully perform a spike, and this will be all the more true considering that the women’s net height is seven inches lower than that used in men’s volleyball. Confirming this inference, research also shows that the successful attack percentage (that is, the frequency with which the ball is successfully hit over the net into the opponent’s court in an attempt to score) is so much higher with men than women that someone analyzing game statistics can consistently identify games played by men as opposed to women on the basis of this statistic alone. These enhanced and more consistently successful attacks by men directly correlate to their greater jumping ability and attack velocity at the net. (Kountouris 2015.)

55. The combination of the innate male-female differences cited above, along with the lower net height in women's volleyball, means that if a reasonably athletic male is permitted to compete against women, the participating female players will likely be exposed to higher ball velocities that are outside the range of what is typically seen in women's volleyball. When we recall that ball-to-head impact is a common cause of concussion among women volleyball players, this fact makes it clear that participation in girls' or women's volleyball by biologically male individuals will increase concussion injury risk for participating girls or women.

56. Male sex-based advantages in leg strength also lead to greater kick velocity. In comparison with women, men kick balls harder and faster. A study comparing kicking velocity between university-level male and female soccer players found that males kick the ball with an average 20% greater velocity than females. (Sakamoto 2014.) Applying the same principles of physics we have just used above, we see that a soccer ball kicked by a male, travelling an average 20% faster than a ball kicked by a female, will deliver 44% more energy on head impact. Greater force-generating capacity will thus increase the risk of an impact injury such as concussion.

## **VI. ENHANCED FEMALE VULNERABILITY TO CERTAIN INJURIES**

57. Above, I have reviewed physiological differences that result in the male body bringing greater weight, speed, and force to the athletic field or court,

and how these differences can result in a greater risk of injury to females when males compete against them. It is also true that the female body is more vulnerable than the male body to certain types of injury even when subject to comparable forces. This risk appears to extend to the younger age cohorts as well. An analysis of Finnish student athletes from 1987-1991, analyzing over 600,000 person-years of activity exposures, found, in students under fifteen years of age, higher rates of injury in girls than boys in soccer, volleyball, judo and karate. (Kujala 1995.) Another epidemiological study looking specifically at injury rates in over 14,000 middle schoolers over a 20 year period showed that “in sex-matched sports, middle school girls were more likely to sustain *any* injury (RR = 1.15, 95% CI = 1.1, 1.2) or a time-loss injury (RR = 1.09, 95% CI = 1.0, 1.2) than middle school boys.” In analyzed both-sex sports (i.e., sex-separated sports that both girls and boys play, like soccer), girls sustained higher injury rates, and greater rates of time-loss injury. (Beachy 2014.) Another study of over 2000 middle school students at nine schools showed that the injury rate was higher for girls’ basketball than for football (39.4 v 30.7/1000 AEs), and injury rates for girls’ soccer were nearly double that of boys’ soccer (26.3 v. 14.7/1000 AEs). (Caswell 2017.) In this regard, I will focus on two areas of heightened female vulnerability to collision-related injury which have been extensively studied: concussions, and anterior cruciate ligament injuries.

## A. Concussions

58. Females are more likely than males to suffer concussions in comparable sports, and on average suffer more severe and longer lasting disability once a concussion does occur. (Harmon 2013 at 4; Berz 2015; Blumenfeld 2016; Covassin 2003; Rowson 2016.) Females also seem to be at higher risk for post-concussion syndrome than males. (Berz 2015; Blumenfeld 2016; Broshek 2005; Colvin 2009; Covassin 2012; Dick 2009; Marar 2012; Preiss-Farzanegan 2009.)

59. The most widely-accepted definition of sport-related concussion comes from the Consensus Statement on Concussion in Sport (see below).<sup>17</sup> (McCrory 2018.) To summarize, concussion is “a traumatically induced transient

---

<sup>17</sup> “Sport related concussion is a traumatic brain injury induced by biomechanical forces. Several common features that may be utilised in clinically defining the nature of a concussive head injury include:

SRC may be caused either by a direct blow to the head, face, neck or elsewhere on the body with an impulsive force transmitted to the head.

SRC typically results in the rapid onset of short-lived impairment of neurological function that resolves spontaneously. However, in some cases, signs and symptoms evolve over a number of minutes to hours.

SRC may result in neuropathological changes, but the acute clinical signs and symptoms largely reflect a functional disturbance rather than a structural injury and, as such, no abnormality is seen on standard structural neuroimaging studies.

SRC results in a range of clinical signs and symptoms that may or may not involve loss of consciousness. Resolution of the clinical and cognitive features typically follows a sequential course. However, in some cases symptoms may be prolonged.

The clinical signs and symptoms cannot be explained by drug, alcohol, or medication use, other injuries (such as cervical injuries, peripheral vestibular dysfunction, etc) or other comorbidities (e.g., psychological factors or coexisting medical conditions).”

disturbance of brain function and involves a complex pathophysiological process” that can manifest in a variety of ways. (Harmon 2013 at 1.)

60. Sport-related concussions have undergone a significant increase in societal awareness and concurrent injury reporting since the initial passage of the Zachery Lystedt Concussion Law in Washington State in 2009 (Bompadre 2014), and the subsequent passage of similar legislation governing return-to-play criteria for concussed athletes in most other states in the United States. (Nat’l Cnf. of State Leg’s 2018). Concussion is now widely recognized as a common sport-related injury, occurring in both male and female athletes. (CDC 2007.) Sport-related concussions can result from player-surface contact or player-equipment contact in virtually any sport. However, sudden impact via a player-to-player collision, with rapid deceleration and the transmission of linear or rotational forces through the brain, is also a common cause of concussion injury. (Covassin 2012; Marar 2012; Barth 2001; Blumenfeld 2016; Boden 1998; Harmon 2013 at 4.)

61. A large retrospective study of U.S. high school athletes showed a higher rate of female concussions in soccer (79% higher), volleyball (0.6 concussions/10,000 exposures, with 485,000 reported exposures, vs. no concussions in the male cohort), basketball (31% higher), and softball/baseball (320% higher). (Marar 2012.) A similarly-sized, similarly-designed study comparing concussion rates between NCAA male and female collegiate athletes showed, overall, a concussion rate among females 40% higher than that of

males. Higher rates of injury were seen across individual sports as well, including ice hockey (10% higher); soccer (54% higher); basketball (40% higher); and softball/baseball (95% higher). (Covassin 2016.) The observations of these authors, my own observations from clinical practice, and the acknowledgment of our own Society's Position Statement (Harmon 2013), all validate the higher frequency and severity of sport-related concussions in women and girls.

62. Most epidemiological studies to date looking at sport-related concussion in middle schoolers show that more boys than girls are concussed. There are fewer studies estimating concussion *rate*. This is, in part, because measuring injury rate is more time and labor-intensive. Researchers at a childrens' hospital, for example, could analyze the number of children presenting to the emergency department with sport-related concussion and publish findings of absolute number. However, to study concussion incidence, athlete exposures also have to be recorded. Generally speaking, an athlete exposure is a single practice or game where an athlete is exposed to playing conditions that could reasonably supply the necessary conditions for an injury to occur. Rates of athletic injury, concussion among them, are then, by convention, expressed in terms of injury rate per 1000 athletic exposures. More recently, some studies have been published that analyze the rates of concussion in the middle school population. Looking at the evidence, the conclusion can be made that females experience increased susceptibility to concussive injuries before puberty. For example, Ewing-Cobbs, et al. (2018) found elevated post-

concussion symptoms in girls across all age ranges studied, including children between the ages of 4 and 8. Kerr's 2017 study of middle school students showed over three times the rate of female vs male concussion in students participating in sex-comparable sports [0.18 v. 0.66/1000 A.E.'s]. (Kerr 2017.) This is the first study I am aware of that mimics the trends seen in adolescent injury epidemiology showing a higher rate of concussion in girls than boys in comparable sports.

63. More recent research looking at the incidence of sport-related concussions in U.S. middle schoolers between 2015 and 2020, found that the rate of concussion was higher in middle school athletes than those in high school. In this study, girls had more than twice the rate of concussion injury (0.49/1000 athletic exposures vs 0.23/1000 AE) in analyzed sports (baseball/softball, basketball, soccer and track), as well as statistically greater time loss. (Hacherl 2021 (Journal of Athletic Training); Hacherl 2021 (Archives of Clinical Neuropsychology).) The authors hypothesized that the increasing incidence of concussion in middle school may relate to "other distinct differences associated with the middle school sport setting itself, such as, the large variations in player size and skill."<sup>18</sup>

64. In addition, females on average suffer materially greater cognitive impairment than males when they do suffer a concussion. Group differences in

---

<sup>18</sup> <https://www.nata.org/press-release/062421/middle-school-sports-have-overall-higher-rate-concussion-reported-high-school>.

cognitive impairment between females and males who have suffered concussion have been extensively studied. A study of 2340 high school and collegiate athletes who suffered concussions determined that females had a 170% higher frequency of cognitive impairment following concussions, and that in comparison with males, female athletes had significantly greater declines in simple and complex reaction times relative to their preseason baseline levels. Moreover, the females experienced greater objective and subjective adverse effects from concussion even after adjusting for potentially protective effect of helmets used by some groups of male athletes. (Broshek 2005 at 856, 861; Colvin 2009; Covassin 2012.)

65. This large discrepancy in frequency and severity of concussion injury is consistent with my own observations across many years of clinical practice. The large majority of student athletes who have presented at my practice with severe and long-lasting cognitive disturbance have been adolescent girls. I have seen girls remain symptomatic for over a year, and lose ground academically and become isolated from their peer groups due to these ongoing symptoms. For patients who experience these severe effects, post-concussion syndrome can be life-altering.

66. Some of the anatomical and physiological differences that we have considered between males and females help to explain the documented differences in concussion rates and in symptoms between males and females. (Covassin 2016; La Fontaine 2019; Lin 2019; Tierney 2005; Wunderle 2014.)

Anatomically, there are significant sex-based differences in head and neck anatomy, with females exhibiting in the range of 30% to 40% less head-neck segment mass and neck girth, and 49% lower neck isometric strength. This means that when a female athlete's head is subjected to the same load as an analogous male, there will be a greater tendency for head acceleration, and resultant injury. (Tierney 2005 at 276-277.)

67. When modeling the effect of the introduction of male mass, speed, and strength into women's rugby, World Rugby gave particular attention to the resulting increases in forces and acceleration (and injury risk) experienced in the head and neck of female players. Their analysis found that "the magnitude of the known risk factors for head injury are . . . predicted by the size of the disparity in mass between players. The addition of [male] speed as a biomechanical variable further increases these disparities," and their model showed an increase of up to 50% in neck and head acceleration that would be experienced in a typical tackle scenario in women's rugby. As a result, "a number of tackles that currently lie beneath the threshold for injury would now exceed it, causing head injury." (World Rugby Transgender Women Guidelines 2020.) While rugby is notoriously contact-intensive, similar increases to risk of head and neck injury to women are predictable in any sport context in which males and females collide at significant speed, as happens from time to time in sports including soccer, softball, and basketball.

68. In addition, even when the heads of female and male athletes are subjected to identical accelerative forces, there are sex-based differences in neural anatomy and physiology, cerebrovascular organization, and cellular response to concussive stimuli that make the female more likely to suffer concussive injury, or more severe concussive injury. For instance, hypothalamic-pituitary disruption is thought to play a role in post-concussion symptomatology that differentially impacts women. (McGroarty 2020; Broshek 2005 at 861.) Another study found that elevated progesterone levels during one portion of the menstrual cycle were associated with more severe post-concussion symptomatology that differentially impacted women. (Wunderle 2014.)

69. As it stands, when females compete against each other, they already have higher rates of concussive injury than males, across most sports. The addition of biologically male athletes into women's contact sports will inevitably increase the risk of concussive injury to girls and women, for the multiple reasons I have explained above, including, but not limited to, the innate male advantage in speed and lean muscle mass. Because the effects of concussion can be severe and long-lasting, particularly for biological females, we can predict with some confidence that if participation by biological males in women's contact sports based on gender identity becomes more common, more biological females will suffer substantial concussive injury and the potential for long-term harm as a result.

## **B. Anterior Cruciate Ligament injuries**

70. The Anterior Cruciate Ligament (“ACL”) is a key knee stabilizer that prevents anterior translation of the tibia relative to the femur and also provides rotatory and valgus knee stability.<sup>19</sup> (Lin 2019 at 4.) Girls and women are far more vulnerable to ACL injuries than are boys and men. The physics of injury that we have reviewed above makes it inevitable that the introduction of biologically male athletes into the female category will increase still further the occurrence of ACL injuries among girls or women who encounter these players on the field.

71. Sports-related injury to the ACL is so common that it is easy to overlook the significance of it. But it is by no means a trivial injury, as it can end sports careers, require surgery, and usually results in early-onset, post-traumatic osteoarthritis, triggering long-term pain and mobility problems later in life. (Wang 2020.)

72. Even in the historic context in which girls and women limit competition to (and so only collide with) other girls and women, the rate of ACL injury is substantially higher among female than male athletes. (Flaxman 2014; Lin 2019; Agel 2005.) One meta-analysis of 58 studies reports that female athletes have a 150% relative risk for ACL injury compared with male athletes, with other estimates suggesting as much as a 300% increased risk. (Montalvo 2019; Sutton 2013.) Particularly in those sports designated as contact sports, or

---

<sup>19</sup> Valgus force at the knee is a side-applied force that gaps the medial knee open.

sports with frequent cutting and sharp directional changes (basketball, field hockey, lacrosse, soccer), females are at greater risk of ACL injury. In basketball and soccer, this risk extends across all skill levels, with female athletes between two and eight times more likely to sustain an ACL injury than their male counterparts. (Lin 2019 at 5.) These observations are widely validated, and consistent with the relative frequencies of ACL injuries that I see in my own practice.

73. When the reasons underlying the difference in the incidence of ACL injury between males and females were first studied in the early 1990s, researchers speculated that the difference might be attributable to females' relative inexperience in contact sports, or to their lack of appropriate training. However, a follow-up 2005 study looking at ACL tear disparities reported that, "Despite vast attention to the discrepancy between anterior cruciate ligament injury rates between men and women, these differences continue to exist." (Agel 2005 at 524.) Inexperience and lack of training do not explain the differences. Sex seems to be an independent predictor of ACL tear risk.

74. In fact, as researchers have continued to study this discrepancy, they have determined that multiple identifiable anatomical and physiological differences between males and females play significant roles in making females more vulnerable to ACL injuries than males. (Flaxman 2014; Lin 2019; Wolf 2015.) Summarizing the findings of a number of separate studies, one researcher recently cited as anatomical risk factors for ACL injury smaller ligament size,

decreased femoral notch width, increased posterior-inferior slope of the lateral tibia plateau, increased knee and generalized laxity, and increased body mass index (BMI). With the exception of increased BMI, each of these factors is more likely to occur in female than male athletes. (Lin 2019 at 5.) In addition, female athletes often stand in more knee valgus (that is, in a “knock-kneed” posture) due to wider hips and a medially-oriented femur. Often, this is also associated with a worsening of knee valgus during jump landings. The body types and movement patterns associated with these valgus knee postures are more common in females and increase the risk for ACL tear. (Hewett 2005.)

75. As with concussion, the cyclic fluctuation of sex-specific hormones in women is also thought to be a possible risk factor for ACL injury. Estrogen acts on ligaments to make them more lax, and it is thought that during the ovulatory phase of menses (when estrogen levels peak), the risk of ACL tear is higher. (Chidi-Ogbolu 2019 at 1; Herzberg 2017.)

76. Whatever the factors that increase the injury risk for ACL tears in women, the fact that a sex-specific difference in the rate of ACL injury exists is well established and widely accepted.

77. Although non-contact mechanisms are the most common reason for ACL tears in females, tears related to contact are also common, with ranges reported across multiple studies of from 20%-36% of all ACL injuries in women. (Kobayashi 2010 at 672.) For example, when a soccer player who is kicking a ball is struck by another player in the lateral knee of the stance leg, medial and

rotational forces can tear the medial collateral ligament (MCL), the ACL, and the meniscus. Thus, as participation in the female category based on identity rather than biology becomes more common (entailing the introduction of athletes with characteristics such as greater speed and lean muscle mass), and as collision forces suffered by girls and women across the knee increase accordingly, the risk for orthopedic injury and in particular ACL tears among impacted girls and women will inevitably rise.

78. Of course there exists variation in all these factors within a given group of males or females. However, it is also true that within sex-specific pools, size differential is somewhat predictable and bounded, even considering outliers. When males are permitted to enter into the pool of female athletes based on gender identity rather than biological sex, there is an increased possibility that a statistical outlier in terms of size, weight, speed, and strength—and potentially an extreme outlier—is now entering the female pool. Although injury is not guaranteed, risks to female participants will increase. And as I discuss later, the available evidence together suggests that this will be true even with respect to males who have been on testosterone suppression for a year or more. World Rugby relied heavily upon this when they were determining their own policy, and I think it is important to reiterate that this policy, rooted in concern for athlete safety, is justifiable based upon current evidence from medical research and what we know about biology.

## VII. TESTOSTERONE SUPPRESSION WILL NOT PREVENT THE HARM TO FEMALE SAFETY IN ATHLETICS

79. A recent editorial in the New England Journal of Medicine opined that policies governing transgender participation in female athletics “must safeguard the rights of all women—whether cisgender or transgender.” (Dolgin 2020.) Unfortunately, the physics and medical science reviewed above tell us that this is not practically possible. If biological males are given a “right” to participate in the female category based on gender identity, then biological women will be denied the right to reasonable expectations of safety and injury risk that have historically been guaranteed by ensuring that females compete (and collide) only with other females.

80. Advocates of unquestioning inclusion based on gender identity often contend that hormonal manipulation of a male athlete can feminize the athlete enough that he is comparable with females for purposes of competition. The NCAA’s Office of Inclusion asserts (still accessible on the NCAA website as of this writing) that “It is also important to know that any strength and endurance advantages a transgender woman arguably may have as a result of her prior testosterone levels dissipate after about one year of estrogen or testosterone suppression therapy.”<sup>20</sup> (NCAA 2011 at 8.) Whether or not this is true is a critically important question.

---

<sup>20</sup> <https://www.ncaa.org/sports/2016/3/2/lesbian-gay-bisexual-transgender-and-questioning-lgbtq.aspx>

81. At the outset, we should note that while advocates sometimes claim that testosterone suppression *can* eliminate physiological advantages in a biological male, none of the relevant transgender eligibility policies that I am aware of prior to 2021 requires any demonstration that it has *actually* achieved that effect in a particular male who seeks admission into the female category. The Connecticut policy that is currently at issue in ongoing litigation permits admission to the female category at the high school level without requiring any testosterone suppression at all. Prior to their new policy, just announced in January 2022, the NCAA's policy required no demonstration of any reduction of performance capability, change in weight, or regression of any other physical attribute of the biological male toward female levels. It did not require achievement of any particular testosterone level, and did not provide for any monitoring of athletes for compliance. Moving forward, through a phasing process, the NCAA will ultimately require athletes in each sport to meet requirements of their sport's national governing body (NGB). If no policy exists, the policy of that sport's international governing body applies, or, finally, if no policy exists there, the 2015 policy of the International Olympic Committee (IOC) will apply. The 2015 IOC policy requires no showing of any diminution of any performance capability or physical attribute of the biological male, and requires achievement and compliance monitoring only of a testosterone level below 10nmol/liter—a level far above levels occurring in normal biological

females (0.06 to 1.68 nmol/L).<sup>21</sup> Indeed, female athletes with polycystic ovarian disorder—a condition that results in elevated testosterone levels—rarely exceed 4.8 nmol/L, which is the basis for setting the testing threshold to detect testosterone *doping* in females at 5.0 nmol/L. Thus, males who qualify under the 2015 IOC policy to compete as transgender women may have testosterone levels—even after hormone suppression—*double* the level that would disqualify a biological female for doping with testosterone.<sup>22</sup>

82. As Dr. Emma Hilton has observed, the fact that there are over 3000 sex-specific differences in skeletal muscle alone makes the hypothesis that sex-linked performance advantages are attributable solely to current circulating testosterone levels improbable at best. (Hilton 2021 at 200-01.)

83. In fact, the available evidence strongly indicates that no amount of testosterone suppression can eliminate male physiological advantages relevant to performance and safety. Several authors have recently reviewed the science and statistics from numerous studies that demonstrate that one year (or more) of testosterone suppression does not substantially eliminate male performance advantages. (Hilton 2021; De Varona 2021; Harper 2021.) As a medical doctor, I will focus on those specific sex-based characteristics of males who have

---

<sup>21</sup> Normal testosterone range in a healthy male averages between 7.7 and 29.4 nmol/L.

<sup>22</sup> In November 2021, the IOC released new guidelines, deferring decision-making about a given sport's gender-affectedness to its governing body. The current NCAA policy, however, still utilizes the 2015 IOC policy to determine an athlete's eligibility in event that the sport's national and international governing bodies lack policies to determine eligibility.

undergone normal sex-determined pubertal skeletal growth and maturation that are relevant to the *safety* of female athletes. Here, too, the available science tells us that testosterone suppression does not eliminate the increased risk to females or solve the safety problem.

84. The World Rugby organization reached this same determination based on the currently available science, concluding that male physiological advantages that “create risks [to female players] appear to be only minimally affected” by testosterone suppression. (World Rugby Transgender Women Guidelines 2020.)

85. Surprisingly, so far as public information reveals, the NCAA’s Committee on Competitive Safeguards is not monitoring and documenting instances of transgender participation on women’s teams for purposes of injury reporting. In practice, the NCAA is conducting an experiment which in theory predicts an increased frequency and severity of injuries to women in contact sports, while at the same time failing to collect the relevant data from its experiment.

86. In their recent guidelines, UK Sport determined that, “based upon current evidence, testosterone suppression is unlikely to guarantee fairness between transgender women and natal females in gender-affected sports.” (UK Sports Councils’ Equality Group Guidance 2021 at 7.) They also warned that migration to a scenario by NGBs where eligibility is determined through case-by-case assessment “is unlikely to be practical nor verifiable for entry into

gender-affected sports,” in part because “many tests related to sports performance are volitional,” and incentives on the part of those tested would align with intentional poor performance. (UK Sports Councils’ Equality Group Guidance 2021 at 8.)

87. Despite these concerns, this appears to be exactly the route that the IOC is taking, as reflected in their Framework on Fairness, Inclusion and Non-Discrimination on the Basis of Gender Identity, released in November of 2021.<sup>23</sup> In it, the IOC lists two disparate goals. First, that “where sports organizations elect to issue eligibility criteria for men’s and women’s categories for a given competition, they should do so with a view to . . . [p]roviding confidence that no athlete within a category has an unfair and disproportionate competitive advantage . . . [and] preventing a risk to the physical safety of other athletes.” (IOC Framework 2021 § 4.1.) At the same time, governing bodies are not to preclude any athlete from competing until evidence exists based upon “robust and peer-reviewed research that . . . demonstrates a consistent, unfair, disproportionate competitive advantage in performance and/or an unpreventable risk to the physical safety of other athletes” – research moreover that “is largely based on data collected *from a demographic group that is consistent in gender and athletic engagement with the group that the eligibility*

---

<sup>23</sup> The IOC Framework on Fairness, Inclusion and Non-Discrimination on the Basis of Gender Identity and Sex Variations is available at [https://stillmed.olympics.com/media/Documents/News/2021/11/IOC-Framework-Fairness-Inclusion-Non-discrimination-2021.pdf?\\_ga=2.72651665.34591192.1645554375-759350959.1644946978](https://stillmed.olympics.com/media/Documents/News/2021/11/IOC-Framework-Fairness-Inclusion-Non-discrimination-2021.pdf?_ga=2.72651665.34591192.1645554375-759350959.1644946978)

*criteria aim to regulate.”* (IOC Framework 2021 § 6.1) Finally, affected athletes may appeal any evidence-based decision-making process through a further “appropriate internal mediation mechanism, such as a Court of Arbitration for Sport.” (IOC Framework 2021 § 6.1.) Rather than cite any of the growing evidence that testosterone suppression cannot mitigate sex-based performance differences, the IOC’s new policy remains aspirational and opaque. And yet the research relating to hormonal suppression in transgender athletes, as confirmed by World Rugby and UK Sport, already speaks very clearly to the fact that males retain a competitive advantage over women that cannot be eliminated through testosterone suppression alone. What follows is a brief summary of some of these retained differences as they relate to sport safety.

**A. Size and weight**

88. Males are, on average, larger and heavier. As we have seen, these facts alone mean that males bring more kinetic energy into collisions, and that lighter females will suffer more abrupt deceleration in collisions with larger bodies, creating heightened injury risk for impacted females.

89. I start with what is obvious and so far as I am aware undisputed—that after the male pubertal growth spurt, suppression of testosterone does not materially *shrink* bones so as to eliminate height, leverage, performance, and weight differences that follow from simply having longer, larger bones, and being subsequently taller.

90. In addition, multiple studies have found that testosterone suppression may modestly reduce, but does not come close to eliminating the male advantage in muscle mass and lean body mass, which together contribute to the greater average male weight. Researchers looking at transitioning adolescents found that the weight of biological male subjects *increased* rather than decreased after treatment with an antiandrogen testosterone suppressor. (Tack 2018.) In one recent meta-analysis, researchers looking at the musculoskeletal effects of hormonal transition found that even after males had undergone 36 months of therapy, their lean body mass and muscle area remained above those of females. (Harper 2021.) Another group in 2004 studied the effects of testosterone suppression to less than 1 nmol/L in men after one or more years, but still found only a 12% total loss of muscle area by the end of thirty-six months. (Gooren 2004.)

#### **B. Bone density**

91. Bone mass (which includes both size and density) is maintained over *at least* two years of testosterone suppression (Singh-Ospina 2017; Figuera 2019), and one study found it to be preserved even over a median of 12.5 years of suppression (Hilton 2021; Ruetsche 2005).

#### **C. Strength**

92. A large number of studies have now observed minimal or no reduction in strength in male subjects following testosterone suppression. In one recent meta-analysis, strength loss after twelve months of hormone therapy

ranged from negligible to 7%. (Harper 2021.) Given the baseline male strength advantage in various muscle groups of from approximately 25% to 100% above female levels that I have noted in Section V.D above, even a 7% reduction leaves a large retained advantage in strength. Another study looking at handgrip strength—which is a proxy for general strength—showed a 9% loss of strength after two years of hormonal treatment in males who were transitioning, leaving a 23% retained advantage over the female baseline. (Hilton 2021.) Yet another study which found a 17% retained grip strength advantage noted that this placed the median of the group treated with hormone therapy in the 95<sup>th</sup> percentile for grip strength among age-matched females. (Scharff 2019.) Researchers looking at transitioning adolescents showed no loss of grip strength after hormone treatment. (Tack 2018.)

93. One recent study on male Air Force service members undergoing transition showed that they retained more than two thirds of pretreatment performance advantage over females in sit-ups and push-ups after between one and two years of testosterone-reducing hormonal treatment. (Roberts 2020.) Another recently-published observational cohort study looked at thigh strength and thigh muscle cross-sectional area in men undergoing hormonal transition to transgender females. After one year of hormonal suppression, this group saw only a 4% decrease in thigh muscle cross-sectional area, and a negligible decrease in thigh muscle strength. (Wiik 2020.) Wiik and colleagues looked at isokinetic strength measurements in individuals who had undergone at least 12

months of hormonal transition and found that muscle strength was comparable to baseline, leaving transitioned males with a 50% strength advantage over reference females. (Wiik 2020.) Finally, one cross-sectional study that compared men who had undergone transition at least three years prior to analysis, to age-matched, healthy males found that the transgender individuals had retained enough strength that they were still outside normative values for women. This imbalance continued to hold even after *eight* years of hormone suppression. The authors also noted that since males who identify as women often have lower baseline (i.e., before hormone treatment) muscle mass than the general population of males, and since baseline measures for this study were unavailable, the post-transition comparison may actually represent an overestimate of muscle mass regression in transgender females. (Lapauw 2008; Hilton 2021.)

94. World Rugby came to the same conclusion based on its own review of the literature, reporting that testosterone suppression “does not reverse muscle size to female levels,” and in fact that “studies assessing [reductions in] mass, muscle mass, and/or strength suggest that reduction in these variables range between 5% and 10%. Given that the typical male vs female advantages range from 30% to 100%, these reductions are small.” (World Rugby Transgender Women Guidelines 2020.)

95. It is true that most studies of change in physical characteristics or capabilities over time after testosterone suppression involve untrained subjects

rather than athletes, or subjects with low to moderate training. It may be assumed that all of the Air Force members who were subjects in the study I mention above were physically fit and engaged in regular physical training. But neither that study nor those studies looking at athletes quantify the volume or type of strength training athletes are undergoing. The important point to make is that the only effect strength training could have on these athletes is to *counteract* and reduce the limited loss of muscle mass and strength that does otherwise occur to some extent over time with testosterone blockade. There has been at least one study that illustrates this, although only over a short period, measuring strength during a twelve-week period where testosterone was suppressed to levels of 2 nmol/L. During that time, subjects actually increased leg lean mass by 4%, and total lean mass by 2%, and subject performance on the 10 rep-max leg press improved by 32%, while their bench press performance improved by 17%. (Kvorning 2006.)

96. The point for safety is that superior strength enables a biological male to apply greater force against an opponent's body during body contact, or to throw, hit, or kick a ball at speeds outside the ranges normally encountered in female-only play, with the attendant increased risks of injury that I have already explained.

#### **D. Speed**

97. As to speed, the study of transitioning Air Force members found that these males retained a 9% running speed advantage over the female control

group after one year of testosterone suppression, and their average speed had not declined significantly farther by the end of the 2.5 year study period. (Roberts 2020.) Again, I have already explained the implications of greater male speed on safety for females on the field and court, particularly in combination with the greater male body weight.

## CONCLUSION

Since the average male athlete is larger and exerts greater power than the average female athlete in similar sports, male–female collisions will produce greater energy at impact, and impart greater risk of injury to a female, than would occur in most female-female collisions. Because of the well-documented physiological testing and elite performance differences in speed and strength, as well as differences in lean muscle mass that exist across all age ranges, the conclusions of this paper can apply to a certain extent before, as well as during, and after puberty. We have seen that males who have undergone hormone therapy in transition toward a female body type nevertheless retain musculoskeletal “legacy” advantages in muscle girth, strength, and size. We have also seen that the additive effects of these individual advantages create multiplied advantages in terms of power, force generation and momentum on the field of play. In contact or collision sports, sports involving projectiles, or sports where a stick is used to strike something, the physics and physiology reviewed above tell us that permitting male-bodied athletes to compete against, or on the same team as females—even when undergoing testosterone

suppression—must be expected to create predictable, identifiable, substantially increased, and unequal risks of injuries to the participating women.

Based on its independent and extensive analysis of the literature coupled with injury modeling, World Rugby recognized the inadequacy of the International Olympic Committee’s policy to preserve safety for female athletes in their contact sport (the NCAA policy is even more lax in its admission of biological males into the female category). Among the explicit findings of the World Rugby working group were the following:

- Forces and inertia faced by a smaller and slower player during collisions are significantly greater when in contact with a larger, faster player.
- Discrepancies in mass and speed (such as between two opponents in a tackle) are significant determinants of various head and other musculoskeletal injury risks.
- The risk of injury to females is increased by biological males’ greater ability to exert force (strength and power), and also by females’ reduced ability to receive or tolerate that force.
- Testosterone suppression results in only “small” reductions in the male physiological advantages. As a result, heightened injury risks remain for females who share the same field or court with biological males.
- These findings together predict a significant increase in injury rates for females in rugby if males are permitted to participate based on gender identity, *with or without testosterone suppression*, since the magnitude of forces and energy transfer during collisions will increase substantially, directly correlated to the differences in physical attributes that exist between the biological sexes.

Summarizing their work, the authors of the World Rugby Guidelines said that, “World Rugby’s number one stated priority is to make the game as safe as

possible, and so World Rugby cannot allow the risk to players to be increased to such an extent by allowing people who have the force and power advantages conferred by testosterone to play with and against those who do not.” (World Rugby Transgender Guidelines 2020.) As my own analysis above makes clear, I agree with the concerns of UK Sport and the conclusions of World Rugby regarding risk to female athletes. Importantly, I also agree that it must be a high priority for sports governing bodies (and other regulatory or governmental bodies governing sports) to make each sport as safe as reasonably possible. And in my view, medical practitioners with expertise in this area have an obligation to advocate for science-based policies that promote safety.

The *performance* advantages retained by males who participate in women’s sports based on gender identity are readily recognized by the public. When an NCAA hurdler who ranked 200<sup>th</sup> while running in the collegiate male division transitions and immediately leaps to a number one ranking in the women’s division;<sup>24</sup> when a high school male sprinter who ranked 181<sup>st</sup> in the state running in the boys’ division transitions and likewise takes first place in the girls’ division (De Varona 2021), the problem of fairness and equal opportunities for girls and women is immediately apparent, and indeed this problem is being widely discussed today in the media.

---

<sup>24</sup> [https://en.wikipedia.org/wiki/Cece\\_Telfer](https://en.wikipedia.org/wiki/Cece_Telfer) (accessed 6/20/21)

The causes of sports injuries, however, are multivariate and not always as immediately apparent. While, as I have noted, some biological males have indeed competed in a variety of girls' and women's contact sports, the numbers up till now have been small. But recent studies have reported very large increases in the number of children and young people identifying as transgender compared to historical experience. For example, an extensive survey of 9th and 11th graders in Minnesota found that 2.7% identified as transgender or gender-nonconforming— well over 100 times historical rates (Rider 2018), and many other sources likewise report this trend.<sup>25</sup>

Faced with this rapid social change, it is my view as a medical doctor that policymakers have an important and pressing duty not to wait while avoidable injuries are inflicted on girls and women, but instead to proactively establish policies governing participation of biological males in female athletics that give proper and scientifically-based priority to safety in sport for these girls and women. Separating participants in contact sports based on biological sex preserves competitive equity, but also promotes the safety of female athletes by protecting them from predictable and preventable injury. Otherwise, the hard science that I have reviewed in this white paper leaves little doubt that eligibility policies based on ideology or gender identity rather than science, will,

over time, result in increased, and more serious, injuries to girls and women who are forced to compete against biologically male transgender athletes. When basic science and physiology both predict increased injury, then leagues, policy-makers, and legislators have a responsibility to act to protect girls and women before they get hurt.

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>I. CREDENTIALS &amp; SUMMARY .....</b>                                                                                                                                                                                               | <b>1</b>  |
| <b>II. BACKGROUND ON THE FIELD .....</b>                                                                                                                                                                                                | <b>8</b>  |
| A. The biological baseline of the binary sexes.....                                                                                                                                                                                     | 8         |
| B. Definition and diagnosis of gender dysphoria.....                                                                                                                                                                                    | 12        |
| C. Impact of gender dysphoria on minority and vulnerable groups.....                                                                                                                                                                    | 13        |
| D. Three competing conceptual models of gender dysphoria and transgender identity .....                                                                                                                                                 | 14        |
| E. Four competing models of therapy .....                                                                                                                                                                                               | 16        |
| <b>III. THERE IS NO CONSENSUS OR AGREED “STANDARD OF CARE” CONCERNING THERAPEUTIC APPROACHES TO CHILD OR ADOLESCENT GENDER DYSPHORIA.....</b>                                                                                           | <b>22</b> |
| A. Experts and organizations disagree as to whether “distress” is a necessary element for diagnoses that justifies treatment for gender identity issues. ....                                                                           | 23        |
| B. Opinions and practices vary widely about the utilization of social transition for children and adolescents.....                                                                                                                      | 24        |
| C. The WPATH “Standards of Care” is not an impartial or evidence-based document. ....                                                                                                                                                   | 25        |
| D. Opinions and practices differ widely with respect to the proper role of psychological counseling before, as part of, or after a diagnosis of gender dysphoria. ....                                                                  | 28        |
| E. Opinions and practices vary widely with respect to the administration of puberty blockers and cross-sex hormones. ....                                                                                                               | 30        |
| <b>IV. TRANSGENDER IDENTITY IS NOT BIOLOGICALLY BASED. ....</b>                                                                                                                                                                         | <b>33</b> |
| A. No theory of biological basis has been scientifically validated. ....                                                                                                                                                                | 34        |
| B. Large changes across time and geography in the epidemiology of transgender identification are inconsistent with the hypothesis of a biological basis for transgender identity. ....                                                  | 35        |
| C. Disorders of sexual development (or DSDs) and gender identity are very different phenomena, and it is an error to conflate the two.....                                                                                              | 38        |
| D. Studies of individuals born with DSDs suggest that there may be a biological predisposition towards <i>typical</i> gender identifications, but provide no support for a biological basis for <i>transgender</i> identification. .... | 39        |
| <b>V. GENDER IDENTITY IS EMPIRICALLY NOT FIXED FOR MANY INDIVIDUALS. ....</b>                                                                                                                                                           | <b>40</b> |
| A. Most children who experience gender dysphoria ultimately “desist” and resolve to cisgender identification. ....                                                                                                                      | 40        |

|                                                                                                                                                                   |                                                                                                                                                                                                       |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| B.                                                                                                                                                                | Desistance is increasingly observed among teens and young adults who first manifest GD during or after adolescence. ....                                                                              | 42 |
| <b>VI. TRANSITION AND AFFIRMATION IS AN IMPORTANT PSYCHOLOGICAL AND MEDICAL INTERVENTION THAT CHANGES GENDER IDENTITY OUTCOMES. ....</b>                          |                                                                                                                                                                                                       |    |
| <b>45</b>                                                                                                                                                         |                                                                                                                                                                                                       |    |
| A.                                                                                                                                                                | If both a typical gender or a transgender long-term gender identity outcome are possible for a particular patient, the alternatives are not medically neutral. ....                                   | 45 |
| B.                                                                                                                                                                | Social transition of young children is a powerful psychotherapeutic intervention that radically changes outcomes, almost eliminating desistance.....                                                  | 46 |
| C.                                                                                                                                                                | Administration of puberty blockers is a powerful medical and psychotherapeutic intervention that radically changes outcomes, almost eliminating desistance on the historically observed timeline..... | 48 |
| <b>VII. ## I. CREDENTIALS & SUMMARY

1. I am Clinical Professor of Psychiatry at Case Western Reserve University School of Medicine, and maintain an active private clinical practice. I received my MD from Case Western Reserve University in 1967, and completed a psychiatric residency at the University Hospitals of Cleveland in 1973. I became an Assistant Professor of Psychiatry at Case Western in 1973, became a Full Professor in 1985, and in 2021 was honored to be inducted into the Department of Psychiatry's "Hall of Fame."

2. Since July 1973, my specialties have included psychological problems and conditions relating to individuals' sexuality and sexual relations, therapies for sexual problems, and the relationship between love, intimate relationships, and wider mental health. In 2005, I received the Masters and Johnson Lifetime Achievement Award from the Society of Sex Therapy and Research. I am a Distinguished Life Fellow of the American Psychiatric Association.

3. I have served as a book and manuscript reviewer for numerous professional publications. I have been the Senior Editor of the first (2003), second (2010), and third (2016) editions of the *Handbook of Clinical Sexuality for Mental Health Professionals*. In addition to five previously solo-authored books for professionals, I have recently published *Psychotherapeutic Approaches to Sexual Problems* (2020). The book has a chapter titled "The Gender Revolution."

4. In total I have authored or co-authored over 180 journal articles and book chapters, 20 of which deal with the issue of gender dysphoria. I am an invited member of a Cochrane Collaboration subcommittee that is currently preparing a review of the scientific literature on the effectiveness of puberty blocking hormones and of cross-sex hormones for

gender dysphoria for adolescents. Cochrane Reviews are a well-respected cornerstone of evidence-based practice, comprising a systematic review that aims to identify, appraise, and synthesize all the empirical evidence that meets pre-specified eligibility criteria in response to a particular research question.

5. I first encountered a patient suffering what we would now call gender dysphoria in July 1973. In 1974, I founded the Case Western Reserve University Gender Identity Clinic, and have served as Co-Director of that clinic since that time. Across the years, our Clinic treated hundreds of patients who were experiencing a transgender identity. An occasional child was seen during this era. I was the primary psychiatric caregiver for several dozen of our patients and supervisor of the work of other therapists. I was an early member of the Harry Benjamin International Gender Dysphoria Association (later known as WPATH) and served as the Chairman of the committee that developed the 5th version of its Standards of Care. In 1993 the Gender Identity Clinic was renamed, moved to a new location, and became independent of Case Western Reserve University. I continue to serve as Co-Director.

6. In the course of my five decades of practice treating patients who suffered from gender dysphoria, I have at one time or another recommended or prescribed or supported social transition, cross-sex hormones, and surgery for particular patients, but only after extensive diagnostic and psychotherapeutic work.

7. In 2006, Judge Mark Wolf of the Eastern District of Massachusetts asked me to serve as an independent, court-appointed expert in a litigation involving the treatment of a transgender inmate within the Massachusetts prison system. In that litigation, the U.S. Court of Appeals for the First Circuit in a 2014 (En Banc) opinion cited and relied on my expert

testimony. I have been retained by the Massachusetts Department of Corrections as a consultant on the treatment of transgender inmates since 2007.

8. In 2019, I was qualified as an expert and testified concerning the diagnosis, understanding, developmental paths and outcomes, and therapeutic treatment of transgenderism and gender dysphoria, particularly as it relates to children, in the matter of *In the Interest of J.A.D.Y. and J.U.D.Y.*, Case No. DF-15-09887-S, 255th Judicial District, Dallas County, TX (the “*Younger* litigation”). I have provided expert testimony in other litigation as listed in my curriculum vitae. In 2019, I provided written expert testimony in the landmark case in the United Kingdom; *Bell v. The Tavistock and Portman NHS Foundation Trust*.

9. I am regularly requested to speak on the topic of gender dysphoria and have given countless presentations to academic conferences and Departments of Psychiatry around the country. In May of this year, I will be co-presenting a symposium on the management of adolescent-onset transgender identity at American Psychiatric Association’s Annual Meeting.

10. A fuller review of my professional experience, publications, and awards is provided in my curriculum vitae, a copy of which is attached hereto as Exhibit A.

11. I am being compensated for my time spent in connection with this case at a rate of \$400.00 per hour for consultation and \$500.00 per hour for time spent testifying.

12. I have reviewed the “Declaration and Expert Report of Deanna Adkins, MD,” dated January 21, 2022 (“Adkins”). In that declaration Dr. Adkins makes a variety of statements about gender dysphoria, therapies for gender dysphoria, and outcomes of therapies, which I believe to be inaccurate, or unsupported by scientific evidence. Dr. Adkins is a pediatric endocrinologist. I note with some concern that Dr. Adkins makes a number of sweeping and

purportedly scientific assertions but cites almost no peer-reviewed articles or studies that support her opinions.

13. Based on her declaration, Dr. Adkins' practice is focused on children and adolescents; her CV and declaration do not suggest substantial experience in working with adults or older young adults who are living in a transgender identity, or who suffer from gender dysphoria. (This diagnosis requires "clinically significant" distress.) The wider lifecycle view that derives from experience with these adults (and familiarity with the literature concerning them) provides an important cautionary perspective. The psychiatrist or psychologist treating a trans child or adolescent, of course seeks to make the young patient happy, but the overriding consideration is the creation of a happy, highly functional, mentally healthy person for the next 50 to 70 years of life. I refer to treatment that keeps this goal in view as the "life course" perspective.

14. Dr. Adkins' stated belief that the only way to avoid harm is affirmative care is just one of many questionable assumptions that lack firm scientific foundation. Others that frequently ride along with advocates' convictions about affirmative care include:

- a. A trans identity is immutable;
- b. Trans identities are primarily caused by biological forces;
- c. Gender identity and orientation are distinct stable dimensions of identity;
- d. There are no alternative treatments to affirmative care;
- e. Affirmative care lastingly improves mental health and social function;
- f. Affirmative care reduces the rates of suicidal ideation and suicide;
- g. Young teens can give informed consent for hormones because they know best what will make them happy now and in the future;

h. De-transition of affirmed youth is rare;

i. Associated psychopathology during and after affirmative care is primarily due to minority stress.

15. These assertions are inaccurate or unsupported, for reasons that I explain in this Declaration. I will provide citations to published, peer-reviewed articles that inform my judgments.

16. I have also reviewed the “Expert Report and Declaration of Joshua D. Safer, MD,” dated January 21, 2022 (“Safer”). In that declaration Dr. Safer similarly makes a variety of statements about gender dysphoria, therapies for gender dysphoria, and outcomes of therapies, which I believe to be inaccurate, or unsupported by scientific evidence. Dr. Safer also makes a number of sweeping and purportedly scientific assertions that are not substantiated by peer-reviewed articles or studies.

17. It is also my opinion that a number of Dr. Safer’s assertions are inaccurate or unsupported, for reasons that I explain in this Declaration. Similarly, I will provide citations to published, peer-reviewed articles that inform my judgments.

18. A summary of the key points that I explain in this report is as follows:

a. Sex as defined by biology and reproductive function is clear, binary, and cannot be changed. While hormonal and surgical procedures may enable some individuals to “pass” as the opposite gender during some or all of their lives, such procedures carry with them physical, psychological, and social risks, and no procedures can enable an individual to perform the reproductive role of the opposite sex. (Section II.A.)

b. The diagnosis of “gender dysphoria” encompasses a diverse array of conditions, with widely differing pathways and characteristics depending on age of onset, biological sex, mental health, intelligence, motivations for gender transition, socioeconomic status, country of origin, etc. Data from one population (e.g., adults) cannot be assumed to be applicable to others (e.g., children). (Section II.B.)

c. Among practitioners in the field, there are currently widely varying views concerning both the causes of and appropriate therapeutic response to gender dysphoria in children or adolescents. There are no generally accepted “standards of care” and existing studies do not provide a basis for a scientific conclusion as to which therapeutic response results in the best long-term outcomes for affected individuals. (Section III.)

d. Transgender identity is not biologically based. Rather, gender dysphoria is a psychiatric condition that cannot be identified by any biological test or measurement. (Sections IV.A, IV.B.)

e. Disorders of sexual development (“DSDs”) are biological phenomena. It is an error to conflate and/or scientifically link DSDs with incidents of gender dysphoria. (Sections IV.C, IV.D.)

f. The large majority of children who are diagnosed with gender dysphoria “desist”—that is, their gender dysphoria does not persist—by puberty or adulthood. Desistance is also increasingly observed among teens and young adults who have experienced “rapid onset gender dysphoria” — first manifesting gender dysphoria during or shortly after adolescence. (Section V.A., V.B.)

g. “Social transition” —the active affirmation of transgender identity—in young children is a powerful psychotherapeutic intervention that will substantially reduce the

number of children “desisting” from transgender identity. Therefore, the profound implications of “affirmative” treatment—which include taking puberty blockers and cross-sex hormones—must be taken into account where social transition is being considered. (Section VI.A., VI.B.)

h. Administration of puberty blockers is not a benign “pause” of puberty, but rather a powerful medical and psychotherapeutic intervention that almost invariably leads to persistence in a transgender identity and, ultimately, to the administration of cross-sex hormones. (Section VI.C.)

i. The knowledge base concerning the “affirmative” treatment of gender dysphoria available today has very low scientific quality with many long-term implications remaining unknown. (Section VII.A)

j. There are no studies that show that affirmation of transgender identity in young children reduces suicide or suicidal ideation, or improves long-term outcomes, as compared to other therapeutic approaches. Meanwhile, multiple studies show that adult individuals living transgender lives suffer much higher rates of suicidal ideation, completed suicide, and negative physical and mental health conditions than does the general population. This is true before and after transition, hormones, and surgery. (Section VII.B., VII.C.)

k. In light of what is known and not known about the impact of affirmation on the incidence of suicide, suicidal ideation, and other indicators of mental and physical health, it is scientifically baseless, and therefore unethical, to assert that a child or adolescent who express an interest in a transgender identity will kill him- or herself unless adults and peers affirm that child in a transgender identity. (Section VIII.)

1. Hormonal interventions to treat gender dysphoria are experimental in nature and have not been shown to be safe, but rather put an individual at risk of a wide range of long-term and even life-long harms including: physical health risks; sterilization and the associated emotional response; impaired sexual response; surgical complications and life-long after-care; alienation of family and romantic relationships; elevated mental health risks of depression, anxiety, and substance abuse. (Section IX.)

## II. BACKGROUND ON THE FIELD

### A. The biological baseline of the binary sexes

19. Dr. Adkins asserts that “the terms biological sex and biological male or female are imprecise and should be avoided.” (Adkins at 10.) Dr. Safer further asserts that the term biological sex “can cause confusion,” and moreover that a person’s sex encompasses gender identity. (Safer at 6.) These statements are untrue. Biological sex is very well defined in all biological sciences including medicine. It is pervasively important in human development throughout the lifecycle.

20. Sex is not “assigned at birth” by humans visualizing the genitals of a newborn; it is not imprecise. Rather, it is clear, binary, and determined at conception. The sex of a human individual at its core structures the individual’s biological reproductive capabilities—to produce ova and bear children as a mother, or to produce semen and beget children as a father. As physicians know, sex determination occurs at the instant of conception, depending on whether a sperm’s X or Y chromosome fertilizes the egg. A publication of the federal government’s National Institute of Health accurately summarizes the scientific facts:

“Sex is a biological classification, encoded in our DNA. Males have XY chromosomes, and females have XX chromosomes. Sex makes us male or female. Every cell in your body has a sex—making up tissues and organs, like your skin, brain, heart, and

stomach. Each cell is either male or female depending on whether you are a man or a woman.” (NIH 2022.)

21. The binary of biological sex is so fundamental and wide-ranging in its effects on human (and mammal) development and physiology that since 2014 the NIH has required all funded research on humans or vertebrate animals to include “sex as a biological variable” and give “adequate consideration of both sexes in experiments.” (NIH 2015). In 2021, the Endocrine Society issued a position paper elaborating on the application of the NIH requirement. The Endocrine Society correctly stated that “Sex is a biological concept . . . all mammals have 2 distinct sexes;” that “biological sex is . . . a fundamental source of intraspecific variation in anatomy and physiology;” and that “In mammals, numerous sexual traits (gonads, genitalia, etc.) that typically differ in males and females are tightly linked to each other because one characteristic leads to sex differences in other traits.” (Bhargava et al. 2021 at 221, 229.)

22. The Endocrine Society emphasized that “The terms sex and gender should not be used interchangeably,” and noted that even in the case of those “rare” individuals who suffer from some defect such that they “possess a combination of male- and female-typical characteristics, those clusters of traits are sufficient to classify most individuals as either biologically male or female.” They concluded, “Sex is an essential part of vertebrate biology, but gender is a human phenomenon. Sex often influences gender, but gender cannot influence sex.” (Bhargava et al. 2021 at 220-221, 228.) For purposes of this litigation, Dr. Bhargava’s statement that gender cannot influence sex is of central importance.

23. As these statements and the NIH requirement suggest, biological sex pervasively influences human anatomy, its development and physiology. This includes, of course, the development of the human brain, in which many sexually dimorphic characteristics have now been identified. In particular, the Endocrine Society and countless other researchers have

determined that human brains undergo particular sex-specific developmental stages during puberty. This predictable developmental process is a genetically controlled coordinated endocrine response that begins with pituitary influences leading to increases in circulating sex hormones. (Bhargava et al. 2021 at 225, 229; Blakemore et al. 2010 at 926-927, 929; NIH 2001.).

24. Humans have viewed themselves in terms of binary sexes since the earliest historical records. Recognizing a concept of “gender identity” as something distinct from sex is a rather recent innovation whose earliest manifestations likely began in the late 1940s. Its usage became common in medicine in the 1980s and subsequently in the larger culture. Definitions of gender have been evolving and remain individual-centric and subjective. In a statement on “Gender and Health,” the World Health Organization defines “gender” as “the characteristics of women, men, girls and boys that are socially constructed” and that “var[y] from society to society and can change over time,” and “gender identity” as referring to “a person’s deeply felt, internal and individual experience of gender.” (WHO Gender and Health.) As these definitions indicate, a person’s “felt” “experience of gender” is inextricably bound up with and affected by societal gender roles and stereotypes—or, more precisely, by the affected individual’s *perception* of societal gender roles and stereotypes and their personal idiosyncratic meanings. Typically, gendered persons also have subtly different, often idiosyncratic, reactions to societal gender roles and stereotypes without preoccupation with changing their anatomy.

25. Thus, the self-perceived gender of a child begins to develop along with the early stages of identity formation generally, influenced in part from how others label the infant: “I love you, son (daughter).” This designation occurs thousands of times in the first two years of life when a child begins to show awareness of the two possibilities. As acceptance of the designated

gender corresponding to the child's sex is the outcome in >99% of children everywhere, anomalous gender identity formation begs for understanding. Is it biologically shaped? Is it biologically determined? Is it the product of how the child was privately regarded and treated? Is it a product of the quality of early life caregiver attachments? Does it stem from trauma-based rejection of maleness or femaleness, and if so, flowing from what trauma? Does it derive from a tense, chaotic interpersonal parental relationship without physical or sexual abuse? Is it a symptom of another, as of yet unrevealed, emotional disturbance or neuropsychiatric condition (autism)? The answers to these relevant questions are not scientifically known but are not likely to be the same for every trans-identified child, adolescent, or adult.

26. Under the influence of hormones secreted by the testes or ovaries, numerous additional sex-specific differences between male and female bodies continuously develop postnatally, culminating in the dramatic maturation of the primary and secondary sex characteristics with puberty. These include differences in hormone levels, height, weight, bone mass, shape, musculature, body fat levels and distribution, and hair patterns, as well as physiological differences such as menstruation and ejaculation. These are genetically programmed biological consequences of sex—the actual meaning of sex over time. Among the consequences of sex is the consolidation of gender identity during and after puberty.

27. Despite the increasing ability of hormones and various surgical procedures to reconfigure some male bodies to visually pass as female, or vice versa, the biology of the person remains as defined by his (XY) or her (XX) chromosomes, including cellular, anatomic, and physiologic characteristics and the particular disease vulnerabilities associated with that chromosomally defined sex. For instance, the XX (genetically female) individual who takes testosterone to stimulate certain male secondary sex characteristics will nevertheless remain

unable to produce sperm and father children. It is certainly true, as Dr. Adkins writes, that “[h]ormone therapy and social transition significantly change a person’s physical appearance.” (Adkins at 8.) But in critical respects this change can only be “skin deep.” Contrary to assertions and hopes that medicine and society can fulfill the aspiration of the trans individual to become “a complete man” or “a complete woman,” this is not biologically attainable. (Levine 2018 at 6; Levine 2016 at 238.) It is possible for some adolescents and adults to pass unnoticed—that is, to be perceived by most individuals as a member of the gender that they aspire to be—but with limitations, costs, and risks, as I detail later.

## **B. Definition and diagnosis of gender dysphoria**

28. Specialists have used a variety of terms over time, with somewhat shifting definitions, to identify and speak about a distressing incongruence between an individual’s genetically determined sex and the gender with which they identify or to which they aspire. Today’s American Psychiatric Association *Diagnostic and Statistical Manual of Mental Disorders* (“DSM-5”) employs the term Gender Dysphoria and defines it with separate sets of criteria for adolescents and adults on the one hand, and children on the other.

29. There are at least five distinct pathways to gender dysphoria: early childhood onset; onset near or after puberty with no prior cross gender patterns; onset after defining oneself as gay for several or more years and participating in a homosexual lifestyle; adult onset after years of heterosexual transvestism; and onset in later adulthood with few or no prior indications of cross-gender tendencies or identity. (Levine 2021.) The early childhood onset pathway and the more recently observed onset around puberty pathway are most relevant to this matter.

30. Gender dysphoria has very different characteristics depending on age and sex at onset. Young children who are living a transgender identity commonly suffer materially fewer symptoms of concurrent mental distress than do older patients. (Zucker 2018 at 10.) The

developmental and mental health patterns for each of these groups are sufficiently different that data developed in connection with one of these populations cannot be assumed to be applicable to another.

31. The criteria used in DSM-5 to identify Gender Dysphoria include a number of signs of discomfort with one's natal sex and vary somewhat depending on the age of the patient, but in all cases require "clinically significant distress or impairment in . . . important areas of functioning" such as social, school, or occupational settings. The symptoms must persist for at least six months.

32. Children who conclude that they are transgender are often unaware of a vast array of adaptive possibilities for how to live life as a man or a woman—possibilities that become increasingly apparent over time to both males and females. A boy or a girl who claims or expresses interest in pursuing a transgender identity often does so based on stereotypical notions of femaleness and maleness that reflect constrictive notions of what men and women can be. (Levine 2017 at 7.) A young child's—or even an adolescent's—understanding of this topic is quite limited. Nor can they grasp what it may mean for their future to be sterile. These children and adolescents consider themselves to be relatively unique; they do not realize that discomfort with the body and perceived social role is neither rare nor new to civilization. What is new is that such discomfort is thought to indicate that they must be a trans person.

### **C. Impact of gender dysphoria on minority and vulnerable groups**

33. Given that, as I discuss later, a diagnosis of gender dysphoria is now frequently putting even young children on a pathway that leads to irreversible physical changes and sterilization by young adulthood, it should be of serious concern to all practitioners that minority and vulnerable groups are receiving this diagnosis at disproportionately high rates. These include: children of color (Rider et al. 2018), children with mental developmental disabilities

(Reisner et al. 2015), children on the autistic spectrum (at a rate more than 7x the general population) (Shumer et al. 2016; van der Miesen et al. 2018), children with ADHD (Becerra-Culqui et al. 2018), children residing in foster care homes, adopted children (at a rate more than 3x the general population) (Shumer et al. 2017), victims of childhood sexual or physical abuse or other “adverse childhood events” (Thoma 2021 et al.; Newcomb et al. 2020; Kozłowska et al. 2021), children with a prior history of psychiatric illness (Edwards-Leeper et al. 2017; Kaltiala-Heino et al. 2015; Littman 2018), and more recently adolescent girls (in a large recent study, at a rate more than 2x that of boys) (Rider et al. 2018 at 4).

**D. Three competing conceptual models of gender dysphoria and transgender identity**

34. Discussions about appropriate responses by mental health professionals (“MHPs”) to actual or sub-threshold gender dysphoria are complicated by the fact that various speakers and advocates (or a single speaker at different times) view transgenderism through at least three very different paradigms, often without being aware of, or at least without acknowledging, the distinctions.

35. Gender dysphoria is **conceptualized and described by some professionals and laypersons as though it were a serious, physical medical illness that causes suffering,** comparable to diseases that are curable before it spreads, such as melanoma or sepsis. Within this paradigm, whatever is causing distress associated with gender dysphoria—whether secondary sex characteristics such as facial hair, nose and jaw shape, presence or absence of breasts, or the primary anatomical sex organs of testes, ovaries, penis, or vagina—should be removed to alleviate the illness. The promise of these interventions is the cure of the gender dysphoria.

36. Dr. Adkins appears to endorse this perspective, asserting that gender dysphoria is a “medical condition.” (Adkins at 4.) It should be noted, however, that gender dysphoria is a psychiatric, not a medical, diagnosis. Since its inception in DSM-III in 1983, it has always been specified in the psychiatric DSM manuals and has not been specified in medical diagnostic manuals. Notably, gender dysphoria is the only psychiatric condition to be treated by surgery, even though no endocrine or surgical intervention package corrects any identified biological abnormality. (Levine 2016 at 240.)

37. Gender dysphoria is alternatively **conceptualized in developmental terms**, as an adaptation to a psychological problem that may have been first manifested as a failure to establish a comfortable conventional sense of self in early childhood. This paradigm starts from the premise that all human lives are influenced by past processes and events. Trans lives are not exceptions to this axiom. (Levine 2016 at 238.) MHPs who think of gender dysphoria through this paradigm may work both to identify and address causes of the basic problem of the deeply uncomfortable self or a sense of self impaired by later adversity or abuse. The purpose is to ameliorate suffering when the underlying problem cannot be solved. MHPs first work with the patient and (ideally) family to learn about the events and processes that may have led to the trans person repudiating the gender associated with his sex. The developmental paradigm is mindful of temperamental, parental bonding, psychological, sexual, and physical trauma influences, and the fact that young children work out their psychological issues through fantasy and play and adolescents work out their issues by adopting various interests and identity labels.

38. There is evidence among adolescents that peer social influences through “friend groups” (Littman 2018) or through the internet can increase the incidence of gender dysphoria or claims of transgender identity. Responsible MHPs will want to probe these potential influences

to better understand what is truly deeply tied to the psychology of the patient, and what may instead be being “tried on” by the youth as part of the adolescent process of self-exploration and self-definition.

39. In addition, the developmental paradigm recognizes that, with the important exception of genetic sex, essentially all aspects of an individual’s identity evolve—often markedly—across the individual’s lifetime. This includes gender. Some advocates assert that a transgender identity is biologically caused, fixed from early life, and eternally present in an unchanging manner. As I review later, however, this assertion is not supported by science.<sup>1</sup>

40. The third paradigm through which gender dysphoria is alternatively conceptualized is from **a sexual minority rights perspective**. Under this paradigm, any response other than medical and societal affirmation and implementation of a patient’s claim to “be” the opposite gender is a violation of the individual’s civil right to self-expression. Any effort to ask “why” questions about the patient’s condition, or to address underlying causes, is viewed as a violation of autonomy and civil rights. In the last few years, this paradigm has been successful in influencing public policy and the education of pediatricians, endocrinologists, and many mental health professionals. Obviously, however, this is not a medical or psychiatric perspective. Unfortunately, it appears to be the most powerful perspective that exists in the public, non-scientific debate.

#### **E. Four competing models of therapy**

41. Few would disagree that the human psyche is complex. Few would disagree that children’s and adolescents’ developmental pathways typically have surprising twists and turns. The complexity and unpredictability of childhood and adolescent development equally applies to

---

<sup>1</sup> Even the advocacy organization The Human Rights Campaign asserts that a person can have “a fluid or unfixed gender identity.” <https://www.hrc.org/resources/glossary-of-terms>.

trans-identifying youth. Because of past difficulties of running placebo-controlled clinical trials in the transgender treatment arena, substantial disagreements among professionals about the causes of trans identities and their ideal treatments exist. These current disagreements might have been minimized if trans treated persons were carefully followed up to determine long term outcomes. They have not been. When we add to this to the very different current paradigms for understanding transgender phenomena, it is not scientifically surprising that disagreements are sharply drawn. It is with this in mind that I summarize below the leading approaches, and offer certain observations and opinions concerning them.

**(1) The “watchful waiting” therapy model**

42. In Section V.A below I review the uniform finding of eleven follow-up studies that the large majority of children who present with gender dysphoria will desist from desiring a transgender identity by adulthood if left untreated by social transition approaches.

43. When a pre-adolescent child presents with gender dysphoria, a “watchful waiting” approach seeks to allow for the fluid nature of gender identity in children to naturally evolve—that is, take its course from forces within and surrounding the child. Watchful waiting has two versions:

a. Treating any other psychological co-morbidities—that is, other mental illnesses as defined by DSM-5 (separation anxiety disorder, attention deficit hyperactivity disorder, autism spectrum disorder, obsessive compulsive disorder, etc), or subthreshold for diagnosis but behavioral problems that the child may exhibit (school avoidance, bedwetting, inability to make friends, aggression/defiance) without a focus on gender (**model #1**); and

b. No treatment at all for anything but a regular follow-up appointment. This might be labeled a “hands off” approach (**model #2**).

**(2) The psychotherapy model: Alleviate distress by identifying and addressing causes (model #3)**

44. One of the foundational principles of psychotherapy has long been to work with a patient to identify the causes of observed psychological distress and then to address those causes as a means of alleviating the distress. The National Institute of Mental Health has promulgated the idea that 75% of adult psychopathology has its origins in childhood experience.

45. Many experienced practitioners in the field of gender dysphoria, including myself, have believed that it makes sense to employ these long-standing tools of psychotherapy for patients suffering gender dysphoria, asking the question as to what factors in the patient's life are the determinants of the patient's repudiation of his or her natal sex. (Levine 2017 at 8; Levine 2021.) I and others have reported success in alleviating distress in this way for at least some patients, whether the patient's sense of discomfort or incongruence with his or her natal sex entirely disappeared or not. Relieving accompanying psychological co-morbidities leaves the patient freer to consider the pros and cons of transition as he or she matures.

46. Among other things, the psychotherapist who is applying traditional methods of psychotherapy may help—for example—the male patient appreciate the wide range of masculine emotional and behavioral patterns as he grows older. He may discuss with his patient, for example, that one does not have to become a “woman” in order to be kind, compassionate, caring, noncompetitive, to love the arts, and to be devoted to others' feelings and needs. (Levine 2017 at 7.) Many biologically male trans individuals, from childhood to older ages, speak of their perceptions of femaleness as enabling them to discuss their feelings openly, whereas they perceive boys and men to be constrained from emotional expression within the family and larger culture, and to be aggressive. Men, of course, can be emotionally expressive, just as they can

wear pink. Converse examples can be given for girls and women. These types of ideas regularly arise during psychotherapies.

47. As I note above, many gender-nonconforming children and adolescents in recent years derive from minority and vulnerable groups who have reasons to feel isolated and have an uncomfortable sense of self. A trans identity may be a hopeful attempt to redefine the self in a manner that increases their comfort and decreases their anxiety. The clinician who uses traditional methods of psychotherapy may not focus on their gender identity, but instead work to help them to address the actual sources of their discomfort. Success in this effort may remove or reduce the desire for a redefined identity. This often involves a focus on disruptions in their attachment to parents in vulnerable children, for instance, those in the foster care system.

48. Because “watchful waiting” can include treatment of accompanying psychological co-morbidities, and the psychotherapist who hopes to relieve gender dysphoria may focus on potentially causal sources of psychological distress rather than on the gender dysphoria itself, there is no sharp line between “watchful waiting” and the psychotherapy model in the case of prepubescent children.

49. To my knowledge, there is no evidence beyond anecdotal reports that psychotherapy can enable a return to male identification for genetically male boys, adolescents, and men, or return to female identification for genetically female girls, adolescents, and women. On the other hand, anecdotal evidence of such outcomes does exist; I and other clinicians have witnessed reinvestment in the patient’s biological sex in some individual patients who are undergoing psychotherapy. The Internet contains many such reports, and I have published a paper on a patient who sought my therapeutic assistance to reclaim his male gender identity after 30 years living as a woman and is in fact living as a man today. (Levine 2019.) I have seen

children desist even before puberty in response to thoughtful parental interactions and a few meetings of the child with a therapist. There are now a series of articles and at least one major book on the psychological treatment of adolescents. (D’Angelo et al. 2021 at 7-16; Evans & Evans 2021.)

### **(3) The affirmation therapy model (model #4)**

50. While it is widely agreed that the therapist should not directly challenge a claimed transgender identity in a child, some advocates and practitioners go much further, and promote and recommend that any expression of transgender identity should be immediately accepted as decisive, and thoroughly affirmed by means of consistent use of clothing, toys, pronouns, etc., associated with transgender identity. They argue that the child should be comprehensively re-socialized in grade school in their aspired-to gender. As I understand it, this is asserted as a reason why male students who assert a female gender identity must be permitted to compete in girls’ or women’s athletic events. These advocates treat any question about the causes of the child’s transgender identification as inappropriate. They may not recognize the child’s ambivalence. They assume that observed psychological co-morbidities in the children or their families are unrelated or will get better with transition, and need not be addressed by the MHP who is providing supportive guidance concerning the child’s gender identity.

51. Some advocates, indeed, assert that unquestioning affirmation of any claim of transgender identity in children is essential, and that the child will otherwise face a high risk of suicide or severe psychological damage. Dr. Adkins appears to follow this line, asserting that “My clinical experience . . . has been that [patients] suffer and experience worse health outcomes” when they are not permitted to enter all spaces and participate in all activities in a manner “consistent with gender identity.” (Adkins at 9.) This claim is simply not supported by the clinical data we have available to us. Indeed, available long-term data contradicts Dr.

Adkins' claim. I address physical and mental health outcomes in Section VII below, and suicide in Section VIII below.

52. Dr. Adkins also asserts that fully supported social transition is the “only treatment for prepubertal children.” (Adkins at 6.) As I review in the next section, this is not correct. This may be the only treatment that Dr. Adkins considers, but my own conversations and contacts lead me to believe that Dr. James Cantor was correct when he wrote that “almost all clinics and professional associations in the world” do not use “gender affirmation” for prepubescent children and instead “delay any transitions after the onset of puberty.” (Cantor 2019 at 1.)

53. I do not know what proportion of practitioners are using which model. However, in my opinion, in the case of young children, prompt and thorough affirmation of a transgender identity disregards the principles of child development and family dynamics and is not supported by science. Instead of science, this approach is currently being reinforced by an echo-chamber of approval from other like-minded child-oriented professionals who do not sufficiently consider the known negative medical and psychiatric outcomes of trans adults. Rather than recommend social transition in grade school, the MHP must focus attention on the child's underlying internal and familial issues. Ongoing relationships between the MHP and the parents, and the MHP and the child, are vital to help the parents, child, other family members, and the MHP to understand over time the issues that need to be dealt with by each of them.

54. Likewise, since the child's sense of gender develops in interaction with his parents and their own gender roles and relationships, the responsible MHP will almost certainly need to delve into family and marital dynamics.

### III. THERE IS NO CONSENSUS OR AGREED “STANDARD OF CARE” CONCERNING THERAPEUTIC APPROACHES TO CHILD OR ADOLESCENT GENDER DYSPHORIA.

55. Dr. Adkins states that “[t]he only treatment to avoid [ ] serious harm is to recognize the gender identity of patients with gender dysphoria and follow appropriate treatment protocols to affirm gender identity and alleviate distress,” and appears to believe that transition and affirmation of children who suffer from gender dysphoria is a generally accepted “standard of care.” (Adkins at 5.) It is not.

56. As I review in separate sections later, there is far too little firm clinical evidence in this field to permit any evidence-based standard of care. Given the lack of scientific evidence, it is neither surprising nor improper that—as I detailed in Section II—there is a diversity of views among practitioners as to as to the best therapeutic response for the child, adolescent, or young adult who suffers from gender dysphoria. Dr. Adkins is unwittingly confusing therapeutic precedent among those who agree with her views, armed with ideas promulgated by WPATH, with careful scientific documentation of her concepts. She presumes that her views have been scientifically established even though much has been published highlighting the lack of supportive definitive evidence.

57. Reviewing the state of opinion and practice in 2021, the Royal Australian and New Zealand College of Psychiatrists observed that “There are polarised views and mixed evidence regarding treatment options for people presenting with gender identity concerns, especially children and young people.” (RANZCP, 2021.) Similarly, a few years earlier prominent Dutch researchers noted: “[T]here is currently no general consensus about the best approach to dealing with the (uncertain) future development of children with GD, and making decisions that may influence the function and/or development of the child — such as social

transition.” (Ristori & Steensma 2016 at 18.)<sup>2</sup> In this Section, I comment on some of the more important areas of disagreement within the field.

**A. Experts and organizations disagree as to whether “distress” is a necessary element for diagnoses that justifies treatment for gender identity issues.**

58. As outlined in Section II.B above, “clinically significant distress” is one of the criteria used in DSM-5 to identify gender dysphoria. This indicates a heightened level of distress that rises beyond a threshold level of social awkwardness or discomfort with the changing body. It is known that many trans-identified youth with incongruence between their sexed bodies and their gender identity choose not to take hormones; their incongruence is quite tolerable as they further clarify their sexual identity elements. This population raises the questions of what distress is being measured when DSM-5 criteria are met and what else might be done about it.

59. I note that there is no “clinically significant distress” requirement in World Health Organization’s International Classification of Diseases (ICD-11) criteria for gender incongruence, which rather indicates “a marked and persistent incongruence between an individual’s experienced gender and the assigned sex.” (World Health Organization 2019.)

60. Therefore, even between these two committee-based authorities, there is a significant disagreement as to what constitutes a gender condition justifying life-changing interventions. To my knowledge, some American gender clinics and practitioners are essentially operating under the ICD-11 criteria rather than the APA’s DSM-5 criteria, prescribing transition for children, hormonal interventions for slightly older children, and different hormones for adolescents who assert a desire for a transgender identity whether or not they are exhibiting “clinically significant distress.” Others adhere to the DSM-5 diagnostic standard.

---

<sup>2</sup> See also Zucker 2020 which questions the merit of social transition as a first-line treatment.

61. I will add that even from within one “school of thought,” such as embodied by Dr. Adkins, it is not responsible to make a single, categorical statement about the proper treatment of children or adolescents presenting with gender dysphoria or other gender-related issues. There is no single pathway to the development of a trans identity and no reasonably uniform short- or long-term outcome of medically treating it. As individuals grow physically, mature psychologically, and experience or fail to experience satisfying romantic relationships, their life course depends on their differing psychological, social, familial, and life experiences. There should be no trust in assertions that trans identified youth must be treated in a particular manner to avoid harm for two reasons: first, there is no systematic data on the nature of, and the rate of harms of either affirmative treatment, no treatment, or psychological only treatment. Second, as in other youthful psychiatric and other challenges, outcomes vary.

**B. Opinions and practices vary widely about the utilization of social transition for children and adolescents.**

62. Dr. Adkins notes that she is a member of the World Professional Association for Transgender Health (WPATH), invokes a guidance document that that organization has chosen to publish under the title of “standards of care,” and asserts that the WPATH Standards of Care are “widely accepted.” (Adkins at 3, 5.) Below, I will provide some explanation of WPATH and its “Standards of Care,” which are not the product of a strictly scientific organization, and are by no means accepted by all or even most practitioners as setting out best practices.

63. Here, however, I will note that WPATH does not take a position concerning whether or when social transition may be appropriate for pre-pubertal children. Instead, the WPATH “Standards of Care” states that the question of social transition for children is a “controversial issue” and calls for mental health professionals to support families in what it describes as “difficult decisions” concerning social transition.

64. Dr. Erica Anderson is a prominent practitioner in this area who identifies as a transgender woman, who was the first transgender president of USPATH, and who is a former board member of WPATH. Dr. Anderson recently resigned from those organizations and has condemned automatic approval of transition upon the request of a child or adolescent, noting that “adolescents . . . are notoriously susceptible to peer influence,” that transition “doesn’t cure depression, doesn’t cure anxiety disorders, doesn’t cure autism-spectrum disorder, doesn’t cure ADHD,” and instead that “a comprehensive biopsychosocial evaluation” should proceed allowing a child to transition. (Davis 2022.) And as I have explained previously, my own view based on 50 years of experience in this area favors strong caution before approving life-altering interventions such as social transition, puberty blockers, or cross-sex hormones.

**C. The WPATH “Standards of Care” is not an impartial or evidence-based document.**

65. Because WPATH is frequently cited by advocates of social, hormonal, and surgical transition, I provide some context concerning that private organization and its “Standards of Care.”

66. I was a member of the Harry Benjamin International Gender Dysphoria Association from 1974 until 2001. From 1997 through 1998, I served as the Chairman of the eight-person International Standards of Care Committee that issued the fifth version of the Standards of Care. I resigned my membership in 2002 due to my regretful conclusion that the organization and its recommendations had become dominated by politics and ideology, rather than by scientific process, as it was years earlier. In approximately 2007, the Harry Benjamin International Gender Dysphoria Association changed its name to the World Professional Association for Transgender Health.

67. WPATH is a voluntary membership organization. Since at least 2002, attendance at its biennial meetings has been open to trans individuals who are not licensed professionals. While this ensures taking patients' needs into consideration, it limits the ability for honest and scientific debate, and means that WPATH can no longer be considered a purely professional organization.

68. WPATH takes a decided view on issues as to which there is a wide range of opinion among professionals. WPATH explicitly views itself as not merely a scientific organization, but also as an advocacy organization. (Levine 2016 at 240.) WPATH is supportive to those who want sex reassignment surgery ("SRS"). Skepticism as to the benefits of SRS to patients, and strong alternate views, are not well tolerated in discussions within the organization or their educational outreach programs. Such views have been known to be shouted down and effectively silenced by the large numbers of nonprofessional adults who attend the organization's biennial meetings. Two groups of individuals that I regularly work with have attended recent and separate WPATH continuing education sessions. There, questions about alternative approaches were quickly dismissed with "There are none. This is how it is done." Such a response does not accurately reflect what is known, what is unknown, and the diversity of clinical approaches in this complex field.

69. The Standards of Care ("SOC") document is the product of an effort to be balanced, but it is not politically neutral. WPATH aspires to be both a scientific organization and an advocacy group for the transgendered. These aspirations sometimes conflict. The limitations of the Standards of Care, however, are not primarily political. They are caused by the lack of rigorous research in the field, which allows room for passionate convictions on how to care for the transgendered. And, of course, once individuals have socially, medically, and surgically

transitioned, WPATH members and the trans people themselves at the meetings are committed to supporting others in their transitions. Not only have some trans participants been distrustful or hostile to those who question the wisdom of these interventions, their presence makes it difficult for professionals to raise their concerns. Vocal trans rights advocates have a worrisome track record of attacking those who have alternative views. (Dreger 2015.)

70. In recent years, WPATH has fully adopted some mix of the medical and civil rights paradigms. It has downgraded the role of counseling or psychotherapy as a requirement for these life-changing processes. WPATH no longer considers preoperative psychotherapy to be a requirement. It is important to WPATH that the person has gender dysphoria; the pathway to the development of this state is not. (Levine 2016 at 240.) The trans person is assumed to have thoughtfully considered his or her options before seeking hormones, for instance.

71. Most psychiatrists and psychologists who treat patients suffering sufficiently severe distress from gender dysphoria to seek inpatient psychiatric care are not members of WPATH. Many psychiatrists, psychologists, and pediatricians who treat some patients suffering gender dysphoria on an outpatient basis are not members of WPATH. WPATH represents a self-selected subset of the profession along with its many non-professional members; it does not capture the clinical experiences of others. WPATH claims to speak for the medical profession; however, it does not welcome skepticism and therefore, deviates from the philosophical core of medical science. There are pediatricians, psychiatrists, endocrinologists, and surgeons who object strongly, on professional grounds, to transitioning children and providing affirmation in a transgender identity as the first treatment option. WPATH does not speak for all of the medical profession.

72. In 2010 the WPATH Board of Directors issued a statement advocating that incongruence between sex and felt gender identity should cease to be identified in the DSM as a pathology.<sup>3</sup> This position was debated but not adopted by the (much larger) American Psychiatric Association, which maintained the definitions and diagnoses of gender dysphoria as a pathology in the DSM-5 manual issued in 2013.

73. In my experience some current members of WPATH have little ongoing experience with the mentally ill, and many trans care facilities are staffed by MHPs who are not deeply experienced with recognizing and treating frequently associated psychiatric co-morbidities. Further, being a mental health professional, per se, does not guarantee experience and skill in recognizing and effectively intervening in serious or subtle patterns. Because the 7th version of the WPATH SOC deleted the requirement for therapy, trans care facilities that consider these Standards sufficient are permitting patients to be counseled to transition by means of social presentation, hormones, and surgery by individuals with masters rather than medical degrees.

**D. Opinions and practices differ widely with respect to the proper role of psychological counseling before, as part of, or after a diagnosis of gender dysphoria.**

74. In Version 7 of its Standards of Care, released in 2012, WPATH downgraded the role of counseling or psychotherapy, and the organization no longer sees psychotherapy without transition and hormonal interventions as a potential path to eliminate gender dysphoria by enabling a patient to return to or achieve comfort with the gender identity aligned with his or her biology.

---

<sup>3</sup> WPATH *De-Psychopathologisation Statement* (May 26, 2010), available at [wpath.org/policies](http://wpath.org/policies) (last accessed January 21, 2020).

75. Around the world, many prominent voices and practitioners disagree. For example, renowned gender therapists Dr. Laura Edwards-Leeper and Dr. Erica Anderson (who, as mentioned above, identifies as a transgender woman) have recently spoken out arguing that children and adolescents are being subjected to puberty blockers and hormonal intervention far too quickly, when careful and extended psychotherapy and investigation for potential causes of feelings of dysphoria (such as prior sexual abuse) should be the first port of call and might resolve the dysphoria. (Edwards-Leeper & Anderson 2021; Davis 2022.)

76. In a recently published position statement on gender dysphoria, the Royal Australian and New Zealand College of Psychiatrists emphasized the critical nature of mental health treatment for gender dysphoric minors, stressing “the importance of the psychiatrist’s role to undertake thorough assessment and evidence-based treatment ideally as part of a multidisciplinary team, especially highlighting co-existing issues which may need addressing and treating.” The Royal College also emphasized the importance of assessing the “psychological state and context in which Gender Dysphoria has arisen,” before any treatment decisions are made. (RANZCP, 2021.)

77. Dr. Paul Hruz of the University of Washington St. Louis Medical School has noted, “The WPATH has rejected psychological counseling as a viable means to address sex–gender discordance with the claim that this approach has been proven to be unsuccessful and is harmful (Coleman et al. 2012). Yet the evidence cited to support this assertion, mostly from case reports published over forty years ago, includes data showing patients who benefited from this approach (Cohen-Kettenis and Kuiper 1984).” (Hruz 2020.)

**E. Opinions and practices vary widely with respect to the administration of puberty blockers and cross-sex hormones.**

78. There is likewise no broadly accepted standard of care with respect to use of puberty blockers. The WPATH Standards of Care explicitly recognize the lack of any consensus on this important point, stating: “Among adolescents who are referred to gender identity clinics, the number considered eligible for early medical treatment—starting with GnRH analogues to suppress puberty in the first Tanner stages—differs among countries and centers. Not all clinics offer puberty suppression. . . The percentages of treated adolescents are likely influenced by the organization of health care, insurance aspects, cultural differences, opinions of health professionals, and diagnostic procedures offered in different settings.”

79. The use of puberty blockers as a therapeutic intervention for gender dysphoria is often justified by reference to the seminal work of a respected Dutch research team that developed a protocol that administered puberty blockers to children no younger than age 14. However, it is well known that many clinics in North America now administer puberty blockers to children at much younger ages than the “Dutch Protocol” allows. (Zucker 2019.) The Dutch protocol only treated children with these characteristics: a stable cross gender identity from early childhood; dysphoria that worsened with the onset of puberty; were otherwise psychologically healthy; had healthy families; the patient and family agreed to individual and family counselling throughout the protocol. But the experience and results of the Dutch model is being used as a justification for giving puberty blockers to children who differ considerably from these criteria. Its authors have also recently noted this fact. (de Vries 2020.)

80. However, Zucker notes that “it is well known” that clinicians are administering cross-sex hormones, and approving surgery, at ages lower than the minimum age thresholds set by that “Dutch Protocol.” (Zucker 2019 at 5.)

81. Similarly, at least one prominent clinic—that of Dr. Safer at Columbia’s Mt. Sinai Medical Center—is quite openly admitting patients for even *surgical* transition who are not eligible under the criteria set out in WPATH’s Standards of Care. A recent study published by Dr. Safer and colleagues revealed that of a sample of 139 individuals, 45% were eligible for surgery “immediately” under the center’s own criteria, while only 15% were eligible under WPATH’s criteria. That is, *three times* as many patients immediately qualified for surgery under the center’s loose standards than would have qualified under WPATH criteria. (Lichenstein et al. 2020.)

82. Internationally, there has been a recent marked trend *against* use of puberty blockers, as a result of extensive evidence reviews by national medical bodies, which I discuss later. The main gender clinic in Sweden has declared that it will no longer authorize use of puberty blockers for minors below the age of 16. Finland has similarly reversed its course, issuing new guidelines that allow puberty blockers only on a case-by-case basis after an extensive psychiatric assessment. A landmark legal challenge against the UK’s National Health Service in 2020 by “detransitioner” Keira Bell led to the suspension of the use of puberty blockers and new procedures to ensure better psychological care, as well as prompting a thorough evidence review by the National Institute for Health and Care Excellence (NICE 2021a; NICE 2021b).<sup>4</sup>

83. In this country, some voices in the field are now publicly arguing that *no* comprehensive mental health assessment at all should be required before putting teens on puberty blockers or cross-sex hormones (Ghorayshi 2022), while Dr. Anderson and Dr.

---

<sup>4</sup> The decision requiring court approval for administration of hormones to any person younger than age 16 was later reversed on procedural grounds by the Court of Appeal and is currently under consideration by the UK Supreme Court.

Edwards-Leeper argue that U.S. practitioners are already moving too quickly to hormonal interventions. (Edwards-Leeper & Anderson 2021; Davis 2022.) It is evident that opinions and practices are all over the map.

84. It is true that a committee of the American Academy of Pediatrics has issued a statement supporting administration of puberty blockers to children diagnosed with gender dysphoria. It is also true that no other American medical association has endorsed the use of puberty blockers, and that pediatricians are neither endocrinologists nor psychiatrists. Dr. James Cantor published a peer-reviewed paper detailing that the Academy's statement is not evidence-based and misdescribed the few scientific sources it did reference. (Cantor 2019.) It has been well noted in the field that the AAP has declined invitations to publish any rebuttal to Dr. Cantor's analysis. But this is all part of ongoing debate, simply highlighting the absence of any generally agreed standard of care.

85. Dr. Adkins asserts that the Society's 2017 Practice Guidelines on Endocrine Treatment of Gender-Dysphoric/Gender-Incongruent Persons (Hembree et al. 2017) amount to "widely accepted standards of care" that were "developed through rigorous scientific processes." (Adkins at 2, 5 and 6.)

86. Contrary to Dr. Adkins' assertion, the 2017 Endocrine Society Guidelines themselves expressly state that they are *not* "standards of care." The document states: "The guidelines cannot guarantee any specific outcome, *nor do they establish a standard of care*. The guidelines are not intended to dictate the treatment of a particular patient." (Hembree et al. 2017 at 3895 (emphasis added).) Nor do the Guidelines claim to be the result of a "rigorous scientific process." Rather, they expressly advise that their recommendations concerning use of puberty blockers are based only on "low quality" evidence.

87. Dr. Adkins notes that the 2017 Guidelines assert that: “patients with gender dysphoria often must be treated with ‘a safe and effective hormone regimen. . .’” (Adkins at 6.) Notably, however, the Guidelines do not make any firm statement that use of puberty blockers for this purpose *is* safe, and the Guidelines go no further than “suggest[ing]” use of puberty blockers—language the Guidelines warn represents only a “weak recommendation.” (Hembree 2017 at 3872.) Several authors have pointed out that not only were the Endocrine Society suggestions regarding use of puberty blockers reached on the basis of “low quality” evidence, but its not-quite claims of ‘safety’ and ‘efficacy’ are starkly contradicted by several in-depth evidence reviews. (Laidlaw et al., 2019; Malone et al. 2021.) I detail these contradictory findings in more detail in Section VII below.

88. While there is too little meaningful clinical data and no consensus concerning best practices or a “standard of care” this area, there are long-standing ethical principles that do or should bind all medical and mental health professionals as they work with, counsel, and prescribe for these individuals.

89. One of the oldest and most fundamental principles guiding medical and psychological care—part of the Hippocratic Oath—is that the physician must “do no harm.” This states an ethical responsibility that cannot be delegated to the patient. Physicians themselves must weigh the risks of treatment against the harm of not treating. If the risks of treatment outweigh the benefits, principles of medical ethics prohibit the treatment.

#### **IV. TRANSGENDER IDENTITY IS NOT BIOLOGICALLY BASED.**

90. Dr. Safer asserts that “Although the detailed mechanisms are unknown, there is a medical consensus that there is a significant biologic component underlying gender identity” and

that gender identity is a “largely biological phenomenon.” (Safer at 5, 6.) Many advocates of affirmative care assert this belief.

91. However, it is not true. There is no medical consensus that transgender identity has any biological basis. Furthermore, there is considerable well-documented evidence that is inconsistent with the hypothesis of a biological basis for gender identity—at least in the large majority of currently-presenting patients.

**A. No theory of biological basis has been scientifically validated.**

92. At the outset, the attempt to identify a single “typically . . . biological” cause for psychiatric conditions (including gender dysphoria) has been strongly criticized as “out of step with the rest of medicine” and as a lingering “ghost” of an understanding of the nature of psychiatric conditions that is now broadly disproven. (Kendler 2019 at 1088-1089.) Gender dysphoria is defined and diagnosed only as a psychiatric, not a medical, condition.

93. Nonetheless, in a published article, Dr. Safer has referred to data that he asserts supports the existence of “a fixed, biologic basis for gender identity.” (Saraswat et al. 2015 at 199.) But on the contrary, this article itself states that studies attempting to find an association between genetics and transgender identification “have been contradictory,” and that “no statistically significant association between particular genes [and transgender identity] has been described.” (Saraswat 2015 at 202.)

94. Similarly, while some have pointed to very small brain scan studies as evidence of a biological basis, no studies of brain structure of individuals identifying as transgender have found any statistically significant correlation between any distinct structure or pattern and transgender identification, after controlling for sexual orientation and exposure to exogenous hormones. (Sarawat et al. 2015 at 202; Frigerio et al. 2021.)

95. Indeed, the Endocrine Society 2017 Guidelines recognizes: “With current knowledge, we cannot predict the psychosexual outcome for any specific child” and “there are currently no criteria to identify the GD/gender-incongruent children to whom this applies. At the present time, clinical experience suggests that persistence of GD/gender incongruence can only be reliably assessed after the first signs of puberty.” (Hembree et al. 2017 at 3876.)

96. In short, no biological test or measurement has been identified that provides any ability to predict which children will exhibit, and which children will persist in, gender dysphoria or a transgender identification. Unless and until such a test is identified, the theory of a biological basis is a hypothesis still searching for support. A hypothesis is not a fact, and responsible scientists will not confuse hypothesis with fact.

**B. Large changes across time and geography in the epidemiology of transgender identification are inconsistent with the hypothesis of a biological basis for transgender identity.**

97. In fact, there is substantial evidence that the “biological basis” theory is incorrect, at least with respect to the large majority of patients presenting with gender dysphoria today.

98. **Vast changes in incidence:** Historically, there were very low reported rates of gender dysphoria or transgender identification. In 2013, the DSM-5 estimated the incidence of gender dysphoria in adults to be at 2-14 per 100,000, or between 0.002% and 0.014%. (APA 2013 at 454.) Recently however, these numbers have increased dramatically, particularly in adolescent populations. Recent surveys estimate that between 2-9% of high school students self-identify as transgender or “gender non-conforming.” with a significantly large increase in adolescents claiming “nonbinary” gender identity as well. (Johns et al. 2019; Kidd et al. 2021.) Consistent with these surveys, gender clinics around the world have seen numbers of referrals increase rapidly in the last decade, with the Tavistock clinic in London seeing a 30-fold increase in the last decade (GIDS 2019), and similar increases being observed in Finland (Kaltiala-Heino

et al. 2018), the Netherlands (de Vries 2020), and Canada (Zucker 2019). The rapid change in the number of individuals experiencing gender dysphoria points to social and cultural, not biological, causes.

99. **Large change in sex ratio:** In recent years there has been a marked shift in the sex ratio of patients presenting with gender dysphoria or transgender identification. The Tavistock clinic in London saw a ratio of 4 biological females(F):5 biological males(M) shift to essentially 11F:4M in a decade. (GIDS 2019.) One researcher summarizing multiple sources documented a swing of 1F:2M or 1F:1.4M through 2005 to 2F:1M generally (but as high as 7F:1M) in more recent samples. (Zucker 2019 at 2.) This phenomenon has been noted by Dr. Erica Anderson, who said: “The data are very clear that adolescent girls are coming to gender clinics in greater proportion than adolescent boys. And this is a change in the last couple of years. And it’s an open question: What do we make of that? We don’t really know what’s going on. And we should be concerned about it.” (Davis 2022.) Again, this large and rapid change in who is experiencing gender dysphoria points to social, not biological, causes.

100. **Clustering:** Dr. Littman’s recent study documented “clustering” of new presentations of gender dysphoria among natal females in specific schools and among specific friend groups. This again points strongly to social causes for gender dysphoria at least among the adolescent female population. (Littman 2018.)

101. **Desistance:** As I discuss later, there are very high levels of desistance among children diagnosed with gender dysphoria, as well as increasing (or at least increasingly vocal) numbers of individuals who first asserted a transgender identity during or after adolescence, underwent substantial medical interventions to “affirm” that trans-identity, and then “desisted”

and reverted to a gender identity congruent with their sex. (See Section V.B below.) These narratives, too, point to a social and/or psychological cause, rather than a biological one.

102. **“Fluid” gender identification:** Advocates and some practitioners assert that gender identity is not binary, but can span an almost endless range of gender identity self-labels, which a given individual may try on, inhabit, and often discard. (A recent article identifies 72.<sup>5</sup>) I have not heard any theory offered for how there is or could be a biological basis for gender identity as now expansively defined.

103. I frequently read attempts to explain away the points in this Section IV. They include: these problems always existed, but children are now learning that there are effective treatments for their dilemma and are simply seeking them. And; children have hidden their trans identity throughout childhood and now that trans people are recognized and accepted, they are presenting themselves. And; now pediatricians realize that girls can have gender dysphoria and are referring them to gender clinics. But these are all mere hypotheses unsupported by concrete evidence. One set of unproven hypotheses cannot provide support for the unproven hypothesis of biological basis. And none of these hypotheses could even potentially explain the failure of science thus far to identify any predictive biological marker of transgender identification.

104. **Therapies affect gender identity outcomes:** Finally, the evidence shows that therapeutic choices can have a powerful effect on whether and how gender identity does change, or gender dysphoria desists. Social transition of juveniles, for instance, strongly influences gender identity outcomes to such an extent that it has been described a “unique predictor of

---

<sup>5</sup> Allarakha, *What Are the 72 Other Genders?*, MedicineNet, available at: [https://www.medicinenet.com/what\\_are\\_the\\_72\\_other\\_genders/article.htm](https://www.medicinenet.com/what_are_the_72_other_genders/article.htm)

persistence.” (See Section V.B below.) Again, this observation cuts against the hypothesis of biological origin.

**C. Disorders of sexual development (or DSDs) and gender identity are very different phenomena, and it is an error to conflate the two.**

105. Dr. Adkins spends much of her report discussing individuals who suffer from disorders of sexual development (DSDs), apparently as evidence that sex is not binary or clearly defined, or as somehow supporting the idea that transgender identification has a biological basis. (Adkins at 9.) I have extensively detailed that sex is clear, binary, and determined at conception. (Section II.) Here I explain that gender dysphoria is an entirely different phenomenon than DSDs—which unlike transgender identity are indeed biological phenomena. It is an error to conflate the two distinct concepts.

106. Every DSD reflects a genetic enzymatic defect with negative anatomic and physiological consequences. As the Endocrine Society recognized in a 2021 statement: “Given the complexities of the biology of sexual determination and differentiation, it is not surprising that there are dozens of examples of variations or errors in these pathways associated with genetic mutations that are now well known to endocrinologists and geneticists; in medicine, these situations are generally termed *disorders of sexual development* (DSD) or *differences in sexual development*.” Gender Identity on the other hand is uniformly defined as a subjective “sense” of being, a feeling or state of mind. (Section II.C.)

107. The vast majority of those who experience gender dysphoria or a transgender identity do not suffer from any DSD, nor from any genetic enzymatic disorder at all. Conversely, many who suffer from a DSD do not experience a gender identity different from their chromosomal sex (although some may). In short, those who suffer from gender dysphoria are not a subset of those who suffer from a DSD, nor are those who suffer from a DSD a subset of those

who suffer from gender dysphoria. The two are simply different phenomena, one physical, the other mental, defined only as a psychiatric condition. The issue here is not whether biological forces play a role in personality development; it is whether there is strong evidence that it is determinative. Science has come too far to revert to single explanations for gender dysphoria or any psychiatric diagnosis.

108. The importance of this distinction is evident from the scientific literature. For example, in a recent study of clinical outcomes for gender dysphoric patients, Tavistock Clinic researchers *excluded* from their analysis any patients who did not have “normal endocrine function and karyotype consistent with birth registered sex.” (Carmichael et al. 2021 at 4.) In other words, the researchers specifically *excluded* from their study anyone who suffered from genetic-based DSD, or a DSD comprising any serious defect in hormonal use pathways, in order to ensure the study was focused only on individuals experiencing the psychological effects of what we might call “ordinary” gender dysphoria.

**D. Studies of individuals born with DSDs suggest that there may be a biological predisposition towards *typical* gender identifications, but provide no support for a biological basis for *transgender* identification.**

109. Studies of individuals born with serious DSDs have been pointed to as evidence of a biological basis for transgender identification. They provide no such support.

110. One well-known study by Meyer-Bahlburg reviewed the case histories of a number of XY (i.e. biologically male) individuals born with severe DSDs who were surgically “feminized” in infancy and raised as girls. (Meyer-Bahlburg 2005.) The majority of these individuals nevertheless later adopted male gender identity—suggesting a strong biological predisposition towards identification aligned with genetic sex, even in the face of feminized genitalia from earliest childhood, and parental “affirmation” in a transgender identity. But at the same time, the fact that some of these genetically male individuals did *not* later adopt male

gender identity serves as evidence that medical and social influences can indeed encourage and sustain transgender identification.

111. Importantly, the Meyer-Bahlburg study did *not* include any individuals who were assigned a gender identity congruent with their genetic sex who subsequently adopted a transgender identity. Therefore, the study can provide no evidence of any kind that supports the hypothesis of a biological basis for transgender identity. A second study in this area (Reiner & Gearhart 2004) likewise considered exclusively XY subjects, and similarly provides evidence only for a biological bias towards a gender identity congruent with one's genetic sex, even in the face of medical and social "transition" interventions. None of this provides any evidence at all of a biological basis for transgender identity.

#### **V. GENDER IDENTITY IS EMPIRICALLY NOT FIXED FOR MANY INDIVIDUALS.**

112. Dr. Safer states that gender identity is "durable and cannot be changed by medical intervention." (Safer at 5.) Dr. Adkins likewise states that gender identity "cannot be voluntarily changed." (Adkins at 4.) There is extensive evidence that this is not correct. Instead, gender identity changes over time for many individuals.<sup>6</sup> I summarize their two opinions as: they assert that a trans identity in a child or adolescent is immutable—unchangeable by medical, psychotherapeutic, or developmental processes.

##### **A. Most children who experience gender dysphoria ultimately "desist" and resolve to cisgender identification.**

113. A distinctive and critical characteristic of juvenile gender dysphoria is that multiple studies from separate groups and at different times have reported that in the large

---

<sup>6</sup> See *n1 supra*.

majority of patients, absent a substantial intervention such as social transition or puberty blocking hormone therapy, it does *not* persist through puberty.

114. A recent article reviewed all existing follow-up studies that the author could identify of children diagnosed with gender dysphoria (11 studies), and reported that “every follow-up study of GD children, without exception, found the same thing: By puberty, the majority of GD children ceased to want to transition.” (Cantor 2019 at 1.) Another author reviewed the existing studies and reported that in “prepubertal boys with gender discordance . . . the cross gender wishes usually fade over time and do not persist into adulthood, with only 2.2% to 11.9% continuing to experience gender discordance.” (Adelson et al. 2012 at 963; see also Cohen-Kettinis 2008 at 1895.) The Endocrine Society recognized this important baseline fact in its 2017 Guidelines. (Hembree 2017 at 3879.) It should be noted that the reason that the Dutch Protocol waited until age 14 to initiate puberty blockers was that it was well known that many children would desist if left free of hormonal intervention until that age.

115. Findings of high levels of desistance among children who experience gender dysphoria or incongruence have been reaffirmed in the face of critiques through thorough reanalysis of the underlying data. (Zucker 2018.)

116. As I explained in detail in Section IV above, it is not yet known how to distinguish those children who will desist from that small minority whose trans identity will persist.

117. It does appear that prevailing circumstances during particularly formative years can have a significant impact on the outcome of a juvenile’s gender dysphoria. A 2016 study reviewing the follow-up literature noted that “the period between 10 and 13 years” was “crucial” in that “both persisters and desisters stated that the changes in their social environment, the

anticipated and actual feminization or masculinization of their bodies, and the first experiences of falling in love and sexual attraction in this period, contributed to an increase (in the persisters) or decrease (in the desisters) of their gender related interests, behaviors, and feelings of gender discomfort.” (Ristori & Steensma 2016 at 16.) As I discuss in Section VI below, there is considerable evidence that early transition and affirmation causes far more children to persist in a transgender identity.

**B. Desistance is increasingly observed among teens and young adults who first manifest GD during or after adolescence.**

118. Desistance within a relatively short period may also be a common outcome for post-pubertal youths who exhibit recently described “rapid onset gender disorder.” I have observed an increasingly vocal online community of young women who have reclaimed a female identity after claiming a male gender identity at some point during their teen years, and young “detransitioners” (individuals in the process of reidentifying with their birth sex after having undergone a gender transition) are now receiving increasing attention in both clinical literature and social media channels. (It is my understanding that March 12, 2022, is scheduled to be Detransition Awareness Day.)

119. Almost all scientific articles on this topic have appeared within the last few years. Perhaps this historic lack of coverage is not entirely surprising – one academic who undertook an extensive review of the available scientific literature in 2021 noted that the phenomenon was “socially controversial” in that it “poses significant professional and bioethical challenges for those clinicians working in the field of gender dysphoria.” (Expósito Campos 2021 at 270.) This review reported on multifarious reasons for why individuals were motivated to detransition, which included coming to “understand[ ] how past trauma, internalized sexism, and other psychological difficulties influenced the experience of GD.”

120. In 2021, Lisa Littman of Brown University conducted a ground-breaking study of 100 teenage and young adults who had transitioned and lived in a transgender identity for a number of years, and then “detransitioned” or changed back to a gender identity matching their sex. Littman noted that the “visibility of individuals who have detransitioned is new and may be rapidly growing.” (Littman 2021 at 1.) Of the 100 detransitioners included in Littman’s study, 60% reported that their decision to detransition was motivated (at least in part) by the fact that they had become more comfortable identifying as their natal sex, and 38% had concluded that their gender dysphoria was caused by something specific such as trauma, abuse, or a mental health condition. (Littman 2021 at 9.)

121. A significant majority (76%) did not inform their clinicians of their detransition. (Littman 2021 at 11.)

122. A similar study that recruited a sample of 237 detransitioners (the large majority of whom had initially transitioned in their teens or early twenties) similarly reported that a common reason for detransitioning was the subject’s conclusion that his or her gender dysphoria was related to other issues (70% of the sample). (Vandenbussche 2021.)

123. The existence of increasing numbers of youth or young adult detransitioners has also been recently noted by Dr. Edwards-Leeper and Dr. Anderson. (Edwards-Leeper & Anderson 2021.) Edwards-Leeper and Anderson noted “the rising number of detransitioners that clinicians report seeing (they are forming support groups online)” which are “typically youth who experienced gender dysphoria and other complex mental health issues, rushed to medicalize their bodies and regretted it.” Other clinicians working with detransitioners have also noted the recent phenomenon. (Marchiano 2020.)

124. A growing body of evidence suggests that for many teens and young adults, a post-pubertal onset of transgender identification can be a transient phase of identity exploration, rather than a permanent identity, as evidenced by a growing number of young detransitioners (Entwistle 2020; Littman 2021; Vandebussche 2021). Previously, the rate of detransition and regret was reported to be very low, although these estimates suffered from significant limitations and were likely undercounting true regret (D'Angelo 2018). As gender-affirmative care has become popularized, the rate of detransition appears to be accelerating.

125. A recent study from a UK adult gender clinic observed that 6.9% of those treated with gender-affirmative interventions detransitioned within 16 months, and another 3.4% had a pattern of care suggestive of detransition, yielding a rate of probable detransition in excess of 10%. Another 21.7%, however, disengaged from the clinic without completing their treatment plan. While some of these individuals later re-engaged with the gender service, the authors concluded, “detransitioning might be more frequent than previously reported.” (Hall et al. 2021).

126. Another study from a UK primary care practice found that 12.2% of those who had started hormonal treatments either detransitioned or documented regret, while the total of 20% stopped the treatments for a wider range of reasons. The mean age of their presentation with gender dysphoria was 20, and the patients had been taking gender-affirming hormones for an average 5 years (17 months-10 years) prior to discontinuing. Comparing these much higher rates of treatment discontinuation and detransition to the significantly lower rates reported by the older studies, the researchers noted: “Thus, the detransition rate found in this population is novel and questions may be raised about the phenomenon of overdiagnosis, overtreatment, or iatrogenic harm as found in other medical fields” (Boyd et al. 2022 at 15.) Indeed, given that regret may take up to 8-11 years to materialize (Dhejne et al., 2014; Wiepjes et al., 2018), many more

detransitioners are likely to emerge in the coming years. Detransitioner research is still in its infancy, but the Littman and Vandebussche studies in 2021 both report that detransitioners from the recently transitioning cohorts feel they were rushed into medical gender-affirmative interventions with irreversible effects, often without the benefit of appropriate, or in some instances any, psychologic exploration.

## **VI. TRANSITION AND AFFIRMATION IS AN IMPORTANT PSYCHOLOGICAL AND MEDICAL INTERVENTION THAT CHANGES GENDER IDENTITY OUTCOMES.**

### **A. If both a typical gender or a transgender long-term gender identity outcome are possible for a particular patient, the alternatives are not medically neutral.**

127. Where a juvenile experiences gender dysphoria, the gender identity that is stabilized will have a significant impact on the course of their life. Living in a transgender identity for a time will make desistance, if it is ever considered, more difficult to accomplish.

128. If the juvenile desists from the gender dysphoria and becomes reasonably comfortable with a gender identity congruent with their sex—the most likely outcome from a statistical perspective absent affirming intervention—the child will not require ongoing pharmaceutical maintenance and will not have their fertility destroyed post-puberty.

129. However, if the juvenile persists in a transgender identity, under current practices, the child is most likely to require regular administration of hormones for the rest of their lives, exposing them to significant physical, mental health, and relational risks (which I detail in Section IX below), as well as being irreversibly sterilized chemically and/or surgically. The child is therefore rendered a “patient for life” with complex medical implications further to a scientifically unproven course of treatment.

**B. Social transition of young children is a powerful psychotherapeutic intervention that radically changes outcomes, almost eliminating desistance.**

130. Dr. Adkins asserts that social transition is a “a critical part” of the treatment of gender dysphoria. (Adkins at 6, 7). Rather, social transition has a critical *effect* on the persistence of gender dysphoria. It is evident from the scientific literature that engaging in therapy that encourages social transition before or during puberty—which would include participation on athletic teams designated for the opposite sex—is a psychotherapeutic intervention that dramatically changes outcomes. A prominent group of authors has written that “The gender identity affirmed during puberty appears to predict the gender identity that will persist into adulthood.” (Guss et al. 2015 at 421.) Similarly, a comparison of recent and older studies suggests that when an “affirming” methodology is used with children, a substantial proportion of children who would otherwise have desisted by adolescence—that is, achieved comfort identifying with their natal sex—instead persist in a transgender identity. (Zucker 2018 at 7.)

131. Indeed, a review of multiple studies of children treated for gender dysphoria across the last three decades found that early social transition to living as the opposite sex severely reduces the likelihood that the child will revert to identifying with the child’s natal sex, at least in the case of boys. That is, while, as I review above, studies conducted before the widespread use of social transition for young children reported desistance rates in the range of 80-98%, a more recent study reported that fewer than 20% of boys who engaged in a partial or complete social transition before puberty had desisted when surveyed at age 15 or older. (Zucker 2018 at 7<sup>7</sup>; Steensma et al. 2013.)<sup>8</sup> Another researcher observed that a partial or complete gender

---

<sup>7</sup> Zucker found social transition by the child to be strongly correlated with persistence for natal boys, but not for girls. (Zucker 2018 at 5.)

<sup>8</sup> Only 2 (3.6%) of 56 of the male desisters observed by Steensma et al. had made a complete or partial transition prior to puberty, and of the twelve males who made a complete or

social transition prior to puberty “proved to be a unique predictor of persistence.” (Singh et al. 2021 at 14.)

132. Some vocal practitioners of prompt affirmation and social transition even proudly claim that essentially *no* children who come to their clinics exhibiting gender dysphoria or cross-gender identification desist in that identification and return to a gender identity consistent with their biological sex.<sup>9</sup> This is a very large change as compared to the desistance rates documented apart from social transition.

133. Even voices generally supportive of prompt affirmation and social transition are acknowledging a causal connection between social transition and this change in outcomes. As the Endocrine Society recognized in its 2017 Guidelines: “If children have completely socially transitioned, they may have great difficulty in returning to the original gender role upon entering puberty. . . [S]ocial transition (in addition to GD/gender incongruence) has been found to contribute to the likelihood of persistence.” (Hembree et al. 2017 at 3879.) The fact is that these unproven interventions with the lives of kids and their families have systematically documented outcomes. Given this observed phenomenon, I agree with Dr. Ken Zucker who has written that social transition in children must be considered “a form of psychosocial treatment.” (Zucker 2020 at 1.)

134. Moreover, as I review below, social transition cannot be considered or decided alone. Studies show that engaging in social transition starts a juvenile on a “conveyor belt” path

---

partial transition prior to puberty, only two had desisted when surveyed at age 15 or older. Steensma 2013 at 584.

<sup>9</sup> See, e.g., Ehrensaft 2015 at 34: “In my own clinical practice . . . of those children who are carefully assessed as transgender and who are allowed to transition to their affirmed gender, we have no documentation of a child who has ‘desisted’ and asked to return to his or her assigned gender.”

that almost inevitably leads to the administration of puberty blockers, which in turn almost inevitably leads to the administration of cross-sex hormones. The emergence of this well-documented path means that the implications of taking puberty blockers *and* cross-sex hormones must be taken into account even where “only” social transition is being considered or requested by the child or family. As a result, there are a number of important “known risks” associated with social transition.

**C. Administration of puberty blockers is a powerful medical and psychotherapeutic intervention that radically changes outcomes, almost eliminating desistance on the historically observed timeline.**

135. Dr. Adkins speaks of the use of puberty blockers as though this major hormonal disruption of some of the most basic aspects of ordinary human development were entirely benign, acting as a “pause.” (Adkins at 7.) This optimistic view is not based on science. In fact, it should be understood that puberty blockers are usually administered to early-stage adolescents as part of a path that includes social transition. Moreover, medicine does not know what the long-term health effects on bone, brain, and other organs are of a “pause” between ages 11-16. Medicine also does not know if the long-term effects of these compounds are different in boys than in girls. The mental health professional establishment likewise does not know the long-term effects on coping skills, interpersonal comfort, and intimate relationships of this “pause” while one’s peers are undergoing their maturational gains in these vital arenas of future mental health. I address medical, social, and mental health risks associated with the use of puberty blockers in Section IX. Here, I note that the data strongly suggests that the administration of puberty blockers, too, must be considered to be a component of a “psychosocial treatment” with complex implications, rather than a “pause.”

136. Multiple studies show that the large majority of children who begin puberty blockers go on to receive cross-sex hormones. (de Vries 2020 at 2.) A recent study by the

Tavistock and Portman NHS Gender Identity Development Service (UK)—the world’s largest gender clinic—found that 98% of adolescents who underwent puberty suppression continued on to cross-sex hormones. (Carmichael et al 2021 at 12.)<sup>10</sup>

137. These studies demonstrate that going on puberty blockers virtually eliminates the possibility of desistance in juveniles. Rather than a “pause,” puberty blockers appear to act as a psychosocial “switch,” decisively shifting many children to a persistent transgender identity. Therefore, as a practical and ethical matter the decision to put a child on puberty blockers must be considered as the equivalent of a decision to put that child on cross-sex hormones, with all the considerations and informed consent obligations implicit in that decision.

## **VII. TRANSITION AND AFFIRMATION ARE EXPERIMENTAL THERAPIES THAT HAVE NOT BEEN SHOWN TO IMPROVE MENTAL OR PHYSICAL HEALTH OUTCOMES BY YOUNG ADULTHOOD.**

138. It is undisputed that children and adolescents who present with gender dysphoria exhibit a very high level of mental health comorbidities. (Section II.C.) Whether the gender dysphoria is cause or effect of other diagnosed or undiagnosed mental health conditions, or whether these are merely coincident comorbidities, is hotly disputed, but the basic fact is not.

139. Dr. Adkins asserts that when the “transition, affirmation, and hormones” therapy that she advocates is followed, “gender dysphoria is easily managed” (Adkins at 5), implying that transition and hormone therapy have been proven to be effective in relieving gender dysphoria and the general mental health distress that broadly afflicts these children and adolescents. This is scientifically incorrect. It ignores both what is known and what is unknown.

---

<sup>10</sup> See also Brik 2020 where Dutch researchers found nearly 97% of adolescents who received puberty blockers proceeded to cross-sex hormones.

**A. The knowledge base concerning therapies for gender dysphoria is “very low quality.”**

140. At the outset, it is important for all sides to admit that the knowledge base concerning the causes and treatment of gender dysphoria has low scientific quality.

141. In evaluating claims of scientific or medical knowledge, it is axiomatic in science that no knowledge is absolute, and to recognize the widely accepted hierarchy of reliability when it comes to “knowledge” about medical or psychiatric phenomena and treatments. Unfortunately, in this field opinion is too often confused with knowledge, rather than clearly locating what exactly is scientifically known. In order of increasing confidence, such “knowledge” may be based upon data comprising:

a. Expert opinion—it is perhaps surprising to educated laypersons that expert opinion standing alone is the lowest form of knowledge, the least likely to be proven correct in the future, and therefore does not garner as much respect from professionals as what follows;

b. A single case or series of cases (what could be called anecdotal evidence) (Levine 2016 at 239.);

c. A series of cases with a control group;

d. A cohort study;

e. A randomized double-blind clinical trial;

f. A review of multiple trials;

g. A meta-analysis of multiple trials that maximizes the number of patients treated despite their methodological differences to detect trends from larger data sets.

142. Prominent voices in the field have emphasized the severe lack of scientific knowledge in this field. The American Academy of Child and Adolescent Psychiatry has

recognized that “Different clinical approaches have been advocated for childhood gender discordance. . . . There have been no randomized controlled trials of any treatment. . . . [T]he proposed benefits of treatment to eliminate gender discordance . . . must be carefully weighed against . . . possible deleterious effects.” (Adelson et al. at 968–69.) Similarly, the American Psychological Association has stated, “because no approach to working with [transgender and gender nonconforming] children has been adequately, empirically validated, consensus does not exist regarding best practice with pre-pubertal children.” (APA 2015 at 842.)

143. Critically, “there are no randomized control trials with regard to treatment of children with gender dysphoria.” (Zucker 2018 at 8.) On numerous critical questions relating to cause, developmental path if untreated, and the effect of alternative treatments, the knowledge base remains primarily at the level of the practitioner’s exposure to individual cases, or multiple individual cases. As a result, claims to certainty are not justifiable. (Levine 2016 at 239.)

144. Within the last two years, at least three formal evidence reviews concerning hormonal interventions for gender dysphoria have been conducted. All three found all of the available clinical evidence to be very low quality.

145. The British National Health Service (NHS) commissioned formal “evidence reviews” of all clinical papers concerning the efficacy and safety of puberty blockers and cross-sex hormones as treatments for gender dysphoria. These evidence reviews were performed by the U.K. National Institute for Health and Care Excellence (NICE), applying the respected “GRADE” criteria for evaluating the strength of clinical evidence.

146. Both the review of evidence concerning puberty blockers and the review of evidence concerning cross-sex hormones were published in 2020, and both found that *all* available evidence as to both efficacy and safety was “very low quality” according to the

GRADE criteria. (NICE 2021a; NICE 2021b.) “Very low quality” according to GRADE means there is a high likelihood that the patient *will not experience* the hypothesized benefits of the treatment. (Balshem et al. 2011.)

147. Similarly, the highly respected Cochrane Library—the leading source of independent systematic evidence reviews in health care—commissioned an evidence review concerning the efficacy and safety of hormonal treatments now commonly administered to “transitioning transgender women” (i.e., testosterone suppression and estrogen administration to biological males). That review, also published in 2020, concluded that “We found insufficient evidence to determine the efficacy or safety of hormonal treatment approaches for transgender women in transition.” (Haupt et al. 2020 at 2.) It must be understood that both the NICE and the Cochrane reviews considered *all* published scientific studies concerning these treatments.

148. As to social transition, as I have noted above, considerable evidence suggests that socially transitioning a pre-pubertal child puts him or her on a path from which very few children escape—a path which includes puberty blockers and cross-sex hormones before age 18. As a practical matter, then, a decision about social transition for a child must be made in light of what is known and what is unknown about the effects of those expected hormonal interventions.

149. I discuss safety considerations in Section IX below. Here, I detail what is known about the effectiveness of social and hormonal transition and affirmation to improve the mental health of individuals diagnosed with gender dysphoria.

**B. Youth who adopt a transgender identity show no durable improvement in mental health after social, hormonal, or surgical transition and affirmation.**

150. As I noted above, the evidence reviews for the efficacy and safety of hormonal interventions published in 2020 concluded that the supporting evidence is so poor that there is “a

high likelihood that the patient will not experience the hypothesized benefits of the treatment.”

There is now some concrete evidence that on average they do not experience those benefits.

151. An important paper published in 2021 by Tavistock clinic clinicians provided the results of the first longitudinal study that measured widely used metrics of general psychological function and suicidality before commencement of puberty blockers, and then at least annually after commencing puberty blockers. After up to three years, they “found no evidence of change in psychological function with GnRHa treatment as indicated by parent report (CBCL) or self-report (YSR) of overall problems, internalizing or externalizing problems or self-harm” as compared to the pre-puberty-blocker baseline evaluations. “Outcomes that were not formally tested also showed little change.” (Carmichael et al. 2021 at 18-19.) Similarly, a study by Branström and Pachankis of the case histories of a set of individuals diagnosed with GD in Sweden found no positive effect on mental health from hormonal treatment. (Landen 2020.)

152. A cohort study by authors from Harvard and Boston Children’s Hospital found that youth and young adults (ages 12-29) who self-identified as transgender had an elevated risk of depression (50.6% vs. 20.6%) and anxiety (26.7% vs. 10.0%); a higher risk of suicidal ideation (31.1% vs. 11.1%), suicide attempts (17.2% vs. 6.1%), and self-harm without lethal intent (16.7% vs. 4.4%) relative to the matched controls; and a significantly greater proportion of transgender youth accessed inpatient mental health care (22.8% vs. 11.1%) and outpatient mental health care (45.6% vs. 16.1%) services. (Reisner et al. 2015 at 6.) Similarly, a recent longitudinal study of transgender and gender diverse youth and young adults in Chicago found rates of alcohol and substance abuse “substantially higher than those reported by large population-based studies of youth and adults.” (Newcomb et al. 2020 at 14.) Members of the clinical and research team at the prominent Dutch VU University gender dysphoria center recently compared mental

health metrics of two groups of subjects before (mean age 14.5) and after (mean age 16.8) puberty blockers. But they acknowledged that the structure of their study meant that it “can . . . not provide evidence about . . . long-term mental health outcomes,” and that based on what continues to be extremely limited scientific data, “Conclusions about the long-term benefits of puberty suppression should . . . be made with extreme caution.” In other words, we just don’t know. (van der Miesen et al. 2020 at 703.)

153. Kiera Bell, who was diagnosed with gender dysphoria at the Tavistock Clinic, given cross-sex hormones, and subjected to a mastectomy, before desisting and reclaiming her female gender identity, and a Swedish teen girl who appeared in a recent documentary after walking that same path, have both stated that they feel that they were treated “like guinea pigs,” experimental subjects. They are not wrong.

**C. Long-term mental health outcomes for individuals who persist in a transgender identity are poor.**

154. The responsible MHP cannot focus narrowly on the short-term happiness of the young patient, but must instead consider the happiness and health of the patient from a “life course” perspective. When we look at the available studies of individuals who continue to inhabit a transgender identity across adult years, the results are strongly negative.

155. In the United States, the death rates of trans veterans are comparable to those with schizophrenia and bipolar diagnoses—20 years earlier than expected. These crude death rates include significantly elevated rates of substance abuse as well as suicide. (Levine 2017 at 10.) Similarly, researchers in Sweden and Denmark have reported on almost all individuals who underwent sex-reassignment surgery over a 30-year period. (Dhejne et al. 2011; Simonsen et al. 2016.) The Swedish follow-up study similarly found a suicide rate in the post-SRS population

19.1 times greater than that of the controls; both studies demonstrated elevated mortality rates from medical and psychiatric conditions. (Levine 2017 at 10.)

156. A recent study in the American Journal of Psychiatry reported high mental health utilization patterns of adults for ten years after surgery for approximately 35% of patients. (Bränström & Panchankis, 2020.) Indeed, earlier Swedish researchers in a long-term study of all patients provided with SRS over a 30-year period (median time since SRS of > 10 years) concluded that individuals who have SRS exhibit such poor mental health that they should be provided very long-term psychiatric care as the “final” transition step of SRS. (Dhejne et al. 2011, at 6-7.) Unfortunately, across the succeeding decade, in Sweden and elsewhere their suggestion has been ignored.

157. I will note that these studies do not tell us whether the subjects first experienced gender dysphoria as children, adolescents, or adults, so we cannot be certain how their findings apply to each of these subpopulations which represent quite different pathways. But in the absence of knowledge, we should be cautious.

158. Meanwhile, no studies show that affirmation of pre-pubescent children or adolescents leads to more positive outcomes (mental, physical, social, or romantic) by, e.g., age 25 or older than does “watchful waiting” or ordinary therapy.

159. The many studies that I have cited here warn us that as we look ahead to the patient’s life as a young adult and adult, the prognosis for the physical health, mental health, and social well-being of the child or adolescent who transitions to live in a transgender identity is not good. Gender dysphoria is not “easily managed” when one understands the marginalized, vulnerable physical, social, and psychological status of adult trans populations.

# **VIII. TRANSITION AND AFFIRMATION DO NOT DECREASE, AND MAY INCREASE, THE RISK OF SUICIDE.**

## **A. The risk of suicide among transgender youth is confused and exaggerated in the public mind.**

160. While suicide is closely linked to mental health, I comment on it separately because rhetoric relating to suicide figures so prominently in debates about responses to gender dysphoria.

161. At the outset, I will note that any discussion of suicide when considering younger children involves very long-range and very uncertain prediction. Suicide in pre-pubescent children is extremely rare, and the existing studies of gender identity issues in pre-pubescent children do not report significant incidents of suicide. Any suggestion otherwise is misinformed. Our focus for this topic, then, is on adolescents and adults.

162. Some authors have reported rates of suicidal thoughts and behaviors among transgender identifying teens or adults ranging from 25% to as high as 52%, generally through non-longitudinal self-reports obtained from non-representative survey samples. (Toomey et al. 2018.) Dr. Adkins asserted in her declaration submitted in support of Plaintiff’s preliminary injunction motion that “Attempted suicide rates in the transgender community are over 40%,” and that “[t]he only treatment to avoid this serious harm is to . . . affirm gender identity.” (Adkins at 6.) Contrary to these assertions, no studies show that affirmation of children (or anyone else) reduces suicide, prevents suicidal ideation, or improves long-term outcomes, as compared to either a “watchful waiting” or a psychotherapeutic model of response, as I have described above. Rhetorical references to figures such as 40%—and some published studies—confuse suicidal thoughts and actions that represent a cry for help, manipulation, or expression of rage with serious attempts to end life. Such statements or studies ignore a crucial and long-recognized distinction.

163. I have included suicidality in my discussion of mental health above. Here, I focus on actual suicide. Too often, in public comment suicidal thoughts are blurred with suicide. Yet the available data tells us that suicide among children and youth suffering from gender dysphoria is extremely rare.

164. An important new analysis of data covering patients as well as those on the waiting list (and thus untreated) at the UK Tavistock gender clinic—the world’s largest gender clinic—found a total of only four completed suicides across 11 years’ worth of patient data, reflecting an estimated cumulative 30,000 patient-years spent by patients under the clinic’s care or on its waiting list. This corresponded to an annual suicide rate of 0.013%. The proportion of individual patients who died by suicide was 0.03%, which is orders of magnitude smaller than trans adolescents who self-report suicidal behavior or thoughts on surveys. (Biggs 2022b.)

165. Thus, only a minute fraction of trans-identifying adolescents who report thoughts or conduct considered to represent “suicidality” actually commit suicide. I agree with the statement by Dr. Zucker that the assertion by, for example, Karasic and Ehrensaft (2015) that completed suicides among transgender youth are “alarmingly high” “has no formal and systematic empirical basis.” (Zucker 2019 at 3.)

166. Professor Biggs of Oxford, author of the study of incidence of suicide among Tavistock clinic patients, rightly cautions that it is “irresponsible to exaggerate the prevalence of suicide.” (Biggs 2022b at 4.) It is my opinion that telling parents—or even allowing them to believe from their internet reading—that they face a choice between “a live son or a dead daughter” is both factually wrong and unethical. Informed consent requires clinicians to tell the truth and ensure that their patients understand the truth. To be kind, the clinicians who believe

such figures represent high risk of ultimate suicide in adolescence simply do not know the truth; they are ill-informed.

**B. Transition of any sort has not been shown to reduce levels of suicide.**

167. Every suicide is a tragedy, and steps that reduce suicide should be adopted. I have noted above that suicidality (that is, suicidal thoughts or behaviors, rather than suicide) is common among transgender adolescents and young adults before, during, and after social and medical transition. If a medical or mental health professional believes that an individual he or she is diagnosing or treating for gender dysphoria presents a suicide risk, in my view it is unethical for that professional merely to proceed with treatment for gender dysphoria and hope that “solves the problem.” Rather, that professional has an obligation to provide or refer the patient for evidence-based therapies for addressing depression and suicidal thoughts that are well-known to the profession. (Levine 2016 at 242.)

168. This is all the more true because there is in fact no evidence that social and/or medical transition reduces the risk or incidence of actual suicide. On the contrary, in his analysis of those who were patients of or on the waiting list of the Tavistock clinic, Professor Biggs found that the suicide rate was not higher among those on the clinic’s waiting list (and thus as-yet untreated), than for those who were patients under care. (Biggs 2022b.) And as corrected, Bränström and Pachankis similarly acknowledge that their review of records of GD patients “demonstrated no advantage of surgery in relation to . . . hospitalizations following suicide attempts.” (I assume for this purpose that attempts that result in hospitalization are judged to be so serious as to predict a high rate of future suicide if not successfully addressed.”)<sup>11</sup>

---

<sup>11</sup> Turban et al. (2020) has been described in press reports as demonstrating that administration of puberty suppressing hormones to transgender adolescents reduces suicide or suicidal ideation. The paper itself does not make that claim, nor permit that conclusion.

**C. Long-term life in a transgender identity correlates with very high rates of completed suicide.**

169. As with mental health generally, the patient, parent, or clinician fearing the risk of suicide must consider not just the next month or year, but a life course perspective.

170. There are now four long-term studies that analyze completed suicide among those living in transgender identities into adulthood. The results vary significantly, but are uniformly highly negative.

171. Dhejne reported a long-term follow-up study of subjects after sex reassignment surgery. Across the multi-year study, subjects who had undergone SRS committed suicide at 19.1 times the expected rate compared to general population controls matched by age and both sexes. MtF subjects committed suicide at 13.9 times the expected rate, and FtM subjects committed suicide at 40.0 times the expected rate. (Dhejne et al. 2011 Supplemental Table S1.)

172. Asscheman, also writing in 2011, reported results of a long-term follow-up of all transsexual subjects of the Netherlands' leading gender medicine clinic who started cross-sex hormones before July 1, 1997, a total of 1331 patients. Due to the Dutch system of medical and death records, extensive follow-up was achieved. Median follow-up period was 18.5 years. The mortality rate among MtF patients was 51% higher than among the age-matched general population; the rate of completed suicide among MtF patients was six times that of the age-matched general population. (Asscheman et al. 2011.)

173. Importantly, Asscheman et al. found that "No suicides occurred within the first 2 years of hormone treatment, while there were six suicides after 2-5 years, seven after 5-10 years, and four after more than 10 years of CSH treatment at a mean age of 41.5 years." (Asscheman et al. 2011 at 637-638.) This suggests that studies that follow patients for only a year or two after treatment are insufficient. Asscheman et al.'s data suggest that such short-term follow-up is

engaging only with an initial period of optimism, and will simply miss the feelings of disillusion and the increase in completed suicide that follows in later years.

174. A retrospective, long-term study published in 2020 of a very large cohort (8263) of patients referred to the Amsterdam University gender clinic between 1972 and 2017 found that the annual rate of completed suicides among the transgender subjects was “three to four times higher than the general Dutch population.” “[T]he incidence of observed suicide deaths was almost equally distributed over the different stages of treatment.” The authors concluded that “vulnerability for suicide occurs similarly in the different stages of transition.” (Wiepjes et al. 2020.) In other words, neither social nor medical transition reduced the rate of suicide.

175. As with Asscheman et al., Wiepjes et al. found that the median time between start of hormones and suicide (when suicide occurred) was 6.1 years for natal males, and 6.9 years for natal females. Again, short- or even medium-term studies will miss this suicide phenomenon.

176. A 2021 study analyzed the case histories of a cohort of 175 gender dysphoria patients treated at one of the seven UK adult gender clinics who were “discharged” (discontinued as patients) within a selected one-year period. The authors reported the rather shocking result that 7.7% (3/39) of natal males who were diagnosed and admitted for treatment, and who were between 17 and 24 years old, were “discharged” because they committed suicide during treatment. (Hall et al. 2021, Table 2.)

177. None of these studies demonstrates that the hormonal or surgical intervention *caused* suicide. That is possible, but as we have seen, the population that identifies as transgender suffers from a high incidence of comorbidities that correlate with suicide. What these studies demonstrate—at the least—is that this remains a troubled population in need of extensive and careful psychological care that they generally do not receive, and that neither

hormonal nor surgical transition and “affirmation” resolve their underlying problems and put them on the path to a stable and healthy life.

178. In sum, claims that affirmation will reduce the risk of suicide for children and adolescents are not based on science. Instead, transition of any sort must be justified, if at all, as a life-enhancing measure, not a lifesaving measure. (Levine 2016 at 242.) In my opinion, this is an important fact that patients, parents, and even many MHPs fail to understand.

#### **IX. HORMONAL INTERVENTIONS ARE EXPERIMENTAL PROCEDURES THAT HAVE NOT BEEN PROVEN SAFE.**

179. Dr. Adkins also appears to assert as a fact—but without citation to peer-reviewed literature—that social transition, puberty blockers, and cross-sex hormones are known to be “safe.” (Adkins at 5-6, 8.) This is not true. And Dr. Adkins, along with a number of voices in the field, also asserts that puberty blockers act merely as a “pause” in the process of puberty-driven maturation, suggesting that this hormonal intervention has been proven to be fully reversible. This is also an unproven belief.

180. On the contrary, no studies have been done that meaningfully demonstrate that either puberty blockers or cross-sex hormones, as prescribed for gender dysphoria, are safe in other than the short run. No studies have attempted to determine whether the effects of puberty blockers, as currently being prescribed for gender dysphoria, are fully reversible. Neither Dr. Adkins nor Dr. Safer cites any such studies, and there are none. There are only pronouncements. In fact, there are substantial reasons for concern that these hormonal interventions are not safe. Multiple researchers have expressed concern that the full range of possible harms have not even been correctly conceptualized.

181. Because, as I have explained in Section VI, recent evidence demonstrates that pre-pubertal social transition almost always leads to progression on to puberty blockers which in turn

almost always leads to the use of cross-sex hormones, physicians bear the ethical responsibility for a thorough informed consent process for parents and patients that includes this fact and its full implications. Informed consent does not mean sharing with the parents and patients what the doctor believes: it means sharing what is known and what is not known about the intervention. So much of what doctors believe is based on mere trust in what they have been taught. Neither they themselves nor their teachers may be aware of the scientific foundation and scientific limitations of what they are recommending.

**A. Use of puberty blockers has not been shown to be safe or reversible for gender dysphoria.**

182. As I noted above, the recent very thorough literature review performed for the British NHS concluded that *all* available clinical evidence relating to “safety outcomes” from administration of puberty blockers for gender dysphoria is of “very low certainty.” (NHS 2020a at 6.)

183. In its 2017 Guidelines, the Endocrine Society cautioned that “in the future we need more rigorous evaluations of the effectiveness and safety of endocrine and surgical protocols” including “careful assessment of . . . the effects of prolonged delay of puberty in adolescents on bone health, gonadal function, and the brain (including effects on cognitive, emotional, social, and sexual development).” (Hembree et al. 2017 at 3874.) No such “careful” or “rigorous” evaluation of these very serious safety questions has yet been done.

184. Some advocates appear to assume that puberty blockers are “safe” because they have been approved by the Food and Drug Administration (FDA) for use to treat precocious puberty—a rare condition in which the puberty process may start at eight or younger. No such conclusion can be drawn. As the “label” for Lupron (one of the most widely prescribed puberty blockers) explains, the FDA approved the drug only *until* the “age was appropriate for entry into

puberty.” The study provides no information at all as to the safety or reversibility of instead *blocking* healthy, normally-timed puberty’s beginning, and *throughout* the years that body-wide continuing changes normally occur. Given the physical, social, and psychological dangers to the child with precocious puberty, drugs like Lupron are effective in returning the child to a puerile state without a high incidence of significant side effects—that is, they are “safe” to reverse the condition. But use of drugs to suppress normal puberty has multiple organ system effects whose long-term consequences have not been investigated.

185. **Fertility:** The Endocrine Society Guidelines rightly say that research is needed into the effect of puberty blockade on “gonadal function” and “sexual development.” The core purpose and function of puberty blockers is to prevent the maturation of the ovaries or testes, the sources of female hormones and male hormones when stimulated by the pituitary gland. From this predictable process fertility is accomplished within a few years. Despite widespread assertions that puberty blockers are “fully reversible,” there has been no study published on the critical question of whether patients ever develop normal levels of fertility if puberty blockers are terminated after a “prolonged delay of puberty.” The 2017 Endocrine Society Guidelines are correct that there are no data on achievement of fertility “following prolonged gonadotropin suppression” (that is, puberty blockade). (Hembree et al. 2017 at 3880.)

186. **Bone strength:** Multiple studies have documented adverse effects from puberty blockers on bone density. (Klink et al. 2015; Vlot et al. 2016; Joseph et al. 2019.) The most recent found that after two years on puberty blockers, the bone density measurements for a significant minority of the children had declined to clinically concerning levels. Density in the spines of some subjects fell to a level found in only 0.13% of the population. (Biggs 2021.) Some

other studies have found less concerning effects on bone density. While the available evidence remains limited and conflicting, it is not possible to conclude that the treatment is “safe.”

187. **Brain development:** Important neurological growth and development in the brain occurs across puberty. The anatomic and functional effect on brain development of blocking the natural puberty process has not been well studied. A prominent Australian clinical team recently expressed concern that “no data were (or are) available on whether delaying the exposure of the brain to a sex steroid affects psychosexual, cognitive, emotional, or other neuropsychological maturation.” (Kozłowska et al. 2021 at 89.) In my opinion, given the observed correlation between puberty and brain development, the default hypothesis must be that there *would* be a negative impact. For the purpose of protecting patients all over the world, the burden of proof should be on advocates to first demonstrate to a reasonable degree of certainty that brain structure and its measurable cognitive and affect processing are not negatively affected. This recalls the ethical principle: Above All Do No Harm.

188. The Endocrine Society Guidelines acknowledge as much, stating that side effects of pubertal suppression “may include . . . unknown effects on brain development,” that “we need more rigorous evaluations of . . . the effects of prolonged delay of puberty in adolescents on . . . the brain (including effects on cognitive, emotional, social, and sexual development),” and stating that “animal data suggests there may be an effect of GnRH analogs [puberty blockers] on cognitive function.” (Hembree et al. 2017 at 3874, 3882, 3883.) Given this concern, one can only wonder why this relevant question has not been scientifically investigated in a large group of natal males and females.

189. There has been a longitudinal study of one natal male child, assessed before, and again 20 months after, puberty suppression was commenced. It reported a reduction in the

patient's "global IQ," measured an anomalous absence of certain structural brain development expected during normal male puberty, and hypothesized that "a plausible explanation for the G[lobal] IQ decrease should consider a disruption of the synchronic [i.e., appropriately timed] development of brain areas by pubertal suppression." (Schneider et al. 2017 at 7.) This should cause parents and practitioners serious concern.

190. Whether any impairment of brain development is "reversed" upon later termination of puberty blockade has, to my knowledge, not been studied at all. As a result, assertions by medical or mental health professionals that puberty blockade is "fully reversible" are unjustified and based on hope rather than science.

191. Without a number of additional case studies—or preferably statistically significant clinical studies—two questions remain unanswered: Are there brain anatomic or functional impairment from puberty blockers? And are the documented changes reversed over time when puberty blockers are stopped? With these questions unanswered, it is impossible to assert with certainty that the effects of this class of medications are "fully reversible." Such an assertion is another example of ideas based on beliefs rather than on documentation, on hope not science.

192. **Psycho-social harm:** Puberty is a time of stress, anxiety, bodily discomfort during physical development, and identity formation for *all* humans. No careful study has been done of the long-term impact on the young person's coping skills, interpersonal comfort, and intimate relationships from remaining puerile for, e.g., two to five years while one's peers are undergoing pubertal transformations, and of then undergoing an artificial puberty at an older age. However, pediatricians and mental health professionals hear of distress, concern, and social awkwardness in those who naturally have a delayed onset of puberty. In my opinion, individuals

in whom puberty is delayed multiple years are likely to suffer at least subtle negative psychosocial and self-confidence effects as they stand on the sidelines witnessing their peers developing the social relationships (and attendant painful social learning experiences) that come with adolescence. (Levine 2018 at 9.) Social anxiety and social avoidance are common findings in the evaluation of trans-identified children and teens. Are we expected to believe that creating years of being further different than their peers has no lasting internal consequences? Do we ignore Adolescent Psychiatry’s knowledge of the importance of peer groups among adolescents?

193. We simply do not know what all the psychological impacts of NOT grappling with puberty at the ordinary time may be, because it has not been studied. And we have no information as to whether that impact is “fully reversible.”

194. In addition, since the overwhelming proportion of children who begin puberty blockers continue on to cross-sex hormones, it appears that there is an important element of “psychological irreversibility” in play. The question of to what extent the physical and developmental impacts of puberty blockers might be reversible is an academic one, if psycho-social realities mean that very few patients will ever be able to make that choice once they have started down the road of social transition and puberty blockers.

**B. Use of cross-sex hormones in adolescents for gender dysphoria has not been shown to be medically safe except in the short term.**

195. As with puberty blockers, all evidence concerning the safety of extended use of cross-sex hormones is of “very low quality.” The U.K. NICE evidence review cautioned that “the safety profiles” of cross-sex hormone treatments are “largely unknown,” and that several of the limited studies that do exist reported high numbers of subjects “lost to follow-up,” without explanation—a worrying indicator. (NICE 2020b.)

196. The 2020 Cochrane Review reported that: “We found insufficient evidence to determine the . . . safety of hormonal treatment approaches for transgender women in transition.” (Haupt et al. 2020 at 4.) Even the Endocrine Society tagged all its recommendations for the administration of cross-sex hormones as based on “low quality evidence.” (Hembree et al. 2017 at 3889.)

197. **Sterilization:** It is undisputed, however, that harm to the gonads is an expected effect, to the extent that it must be assumed that cross-sex hormones will sterilize the patient. Thus, the Endocrine Society 2017 Guidelines caution that “[p]rolonged exposure of the testes to estrogen has been associated with testicular damage,” that “[r]estoration of spermatogenesis after prolonged estrogen treatment has not been studied,” and that “[i]n biological females, the effect of prolonged treatment with exogenous testosterone upon ovarian function is uncertain.” (Hembree et al. 2017 at 3880.)<sup>12</sup>

198. The Guidelines go on to recommend that the practitioner counsel the patient about the (problematic and uncertain) options available to collect and preserve fertile sperm or ova before beginning cross-sex hormones. The life-long negative emotional impact of infertility on both men and women has been well studied. While this impact has not been studied specifically within the transgender population, the opportunity to be a parent is likely a human, emotional need, and so should be considered an important risk factor when considering gender transition for any patient.

---

<sup>12</sup> See also Guss et al. 2015 at 4 (“a side effect [of cross-sex hormones] may be infertility”) and at 5 (“cross-sex hormones . . . may have irreversible effects”); Tishelman et al. 2015 at 8 (Cross-sex hormones are “irreversible interventions” with “significant ramifications for fertility”).

199. **Sexual response:** Puberty blockers prevent maturation of the sexual organs and response. Some, and perhaps many, transgender individuals who did not go through puberty consistent with their sex and are then put on cross-sex hormones face significantly diminished sexual response as they enter adulthood and are unable ever to experience orgasm. In the case of males, the cross-sex administration of estrogen limits penile genital growth and function. In the case of females, prolonged exposure to exogenous testosterone impairs vaginal function. Much has been written about the negative psychological and relational consequences of anorgasmia among non-transgender individuals that is ultimately applicable to the transgendered. (Levine 2018 at 6.) At the same time, prolonged exposure of females to exogenous testosterone often increases sexual drive to a distracting degree. It is likely that parents and physicians are uncomfortable discussing any aspects of genital sexual activity with patients.

200. **Cardiovascular harm:** Several researchers have reported that cross-sex hormones increase the occurrence of various types of cardiovascular disease, including strokes, blood clots, and other acute cardiovascular events. (Getahun et al. 2018; Guss et al. 2015; Asscheman et al. 2011.) With that said, I agree with the conclusion of the Endocrine Society committee (like that of the NICE Evidence Review) that: “A systematic review of the literature found that data were insufficient (due to very low-quality evidence) to allow a meaningful assessment of patient-important outcomes, such as death, stroke, myocardial infarction, or venous thromboembolism in transgender males. Future research is needed to ascertain the potential harm of hormonal therapies.” (Hembree et al. 2017 at 3891.) Future research questions concerning long-term harms need to be far more precisely defined. The question of whether cross-sex hormones are safe for adolescents and young adults cannot be answered by analogies to hormone replacement therapy in menopausal women (which is not a cross-sex usage).

Medicine has answered safety questions for menopausal women in terms of cancer and cardiovascular safety: at what dose, for what duration, and at what age range. The science of endocrine treatment of gender dysphoric youth is being bypassed by short-term clinical impressions of safety even though physicians know that cardiovascular and cancer processes often develop over many years.

201. Further, in contrast to administration for menopausal women, hormones begun in adolescence are likely to be administered for four to six decades. The published evidence of adverse impact, coupled with the lack of data sufficient to reach a firm conclusion, make it irresponsible to assert that cross-sex hormones “are safe.”

202. **Harm to family and friendship relationships:** As a psychiatrist, I recognize that mental health is a critical part of health generally, and that relationships cannot be separated from and profoundly impact mental health. Gender transition routinely leads to isolation from at least a significant portion of one’s family in adulthood. In the case of a juvenile transition, this will be less dramatic while the child is young, but commonly increases over time as siblings who marry and have children of their own do not wish the transgender individual to be in contact with those children. By adulthood, the friendships of transgender individuals tend to be confined to other transgender individuals (often “virtual” friends known only online) and the generally limited set of others who are comfortable interacting with transgender individuals. (Levine 2017 at 5.) My concerns about this are based on decades of observations in my professional work with patients.

203. **Sexual-romantic harms associated with transition:** After adolescence, transgender individuals find the pool of individuals willing to develop a romantic and intimate relationship with them to be greatly diminished. When a trans person who passes well reveals his or her natal sex, many potential mates lose interest. When a trans person does not pass well,

options are likely further diminished. But regardless of a person's appearance, these adults soon learn that many of their dates are looking for exotic sexual experiences rather than genuinely loving relationships. (Levine 2017 at 5, 13; Levine 2013 at 40.)

**C. The timing of harms.**

204. The multi-year delay between start of hormones and the spike in completed suicide observed by Professor Biggs in the Tavistock data (as discussed in Section VIII above) warns us that the safety and beneficence of these treatments cannot be judged based on short-term studies, or studies that do not continue into adulthood. Similarly, several of the harms that I discuss above would not be expected to manifest until the patients reaches at least middle-age. For example, stroke or other serious cardiovascular event is a complication that is unlikely to manifest during teen years even if its likelihood over the patient's lifetime has been materially increased via obesity, lipid abnormalities, and smoking. Regret over sterilization or over an inability to form a stable romantic relationship may occur sooner. Psychological challenges of being a trans adult may become manifest after the medical profession is only doing routine follow up care—or, in many cases, has lost contact with the patient altogether. Because few, if any, clinics in this country are conducting systematic long-term follow-up with their child and adolescent patients, the doctors who counsel, prescribe, or perform hormonal and surgical therapies are unlikely ever to become aware of the later negative life impacts, however severe. These concerns are compounded by the findings in the recent “detransitioner” research that 76% did not inform their clinicians of their detransition. (Littman 2021.)

205. The possibility that steps along the transition and affirmation pathway, while lessening the pain of gender dysphoria in the short term, could lead to additional sources of crippling emotional and psychological pain, are too often not considered by advocates of social transition and not considered at all by the trans child. (Levine 2016 at 243.) Clinicians must

distinguish the apparent short-term safety of hormones from likely or possible long-term consequences, and help the patient or parents understand these implications as well. The young patient may feel, “I don’t care if I die young, just as long I get to live as a woman.” The mature adult may take a different view. Hopefully, so will the child’s physician.

206. Individual patients often pin excessive hope in transition, believing that transition will solve what are in fact ordinary social stresses associated with maturation, or mental health co-morbidities. In this way, transition can prevent them from mastering personal challenges at the appropriate time or directly addressing conditions that require treatment. When the hoped-for “vanishing” of other mental health or social difficulties does not occur, disappointment, distress, and depression may ensue. It is noteworthy that half of the respondents to the larger “detransitioner” survey reported that their transition had not helped the gender dysphoria, and 70% had concluded that their gender dysphoria was related to other issues. (Vandenbussche 2021.) Without the clinical experience of monitoring the psychosocial outcomes of these young patients as they age into adulthood, many such professionals experience no challenge to their affirmative beliefs. But medical and mental health professionals who deliver trans affirmative care for those with previous and co-existing mental health problems have an ethical obligation to inform themselves, and to inform patients and parents, that these dramatic treatments are not a panacea.

207. In sum, whether we consider physical or mental health, science does not permit us to say that either puberty blockers or cross-sex hormones are “safe,” and the data concerning the mental health of patients before, during, and after such treatments strongly contradict the assertion that gender dysphoria is “easily managed.”

# **LEVINE EXPERT REPORT**

## **EXHIBIT A**

Stephen B. Levine, M.D.

Curriculum Vita  
February, 2022

## **Brief Introduction**

Dr. Levine is Clinical Professor of Psychiatry at Case Western Reserve University School of Medicine. He is the author or coauthor of numerous books on topics relating to human sexuality and related relationship and mental health issues. Dr. Levine has been teaching, providing clinical care, and writing since 1973, and has generated original research, invited papers, commentaries, chapters, and book reviews. He has served as a journal manuscript and book prospectus reviewer for many years. Dr. Levine has been co-director of the Center for Marital and Sexual Health/ Levine, Risen & Associates, Inc. in Beachwood, Ohio from 1992 to the present. He received a lifetime achievement Masters and Johnson's Award from the Society for Sex Therapy and Research in March 2005.

## **Personal Information**

Date of birth 1/14/42

Medical license no. Ohio 35-03-0234-L

Board Certification 6/76 American Board of Neurology and Psychiatry

## **Education**

1963 BA Washington and Jefferson College

1967 MD Case Western Reserve University School of Medicine

1967-68 internship in Internal Medicine University Hospitals of Cleveland

1968-70 Research associate, National Institute of Arthritis and Metabolic Diseases, Epidemiology Field Studies Unit, Phoenix, Arizona, United States Public Health Service

1970-73 Psychiatric Residency, University Hospitals of Cleveland

1974-77 Robert Wood Johnson Foundation Clinical Scholar

## **Appointments at Case Western Reserve University School of Medicine**

1973- Assistant Professor of Psychiatry

1979- Associate Professor

1982- Awarded tenure

1985- Full Professor

1993- Clinical Professor

## Honors

Summa Cum Laude, Washington & Jefferson

Teaching Excellence Award-1990 and 2010 (Residency program)

Visiting Professorships

- Stanford University-Pfizer Professorship program (3 days)–1995
- St. Elizabeth’s Hospital, Washington, DC –1998
- St. Elizabeth’s Hospital, Washington, DC--2002

Named to America’s Top Doctors consecutively since 2001

Invitations to present various Grand Rounds at Departments of Psychiatry and Continuing Education Lectures and Workshops

Masters and Johnson Lifetime Achievement Award from the Society of Sex Therapy and Research, April 2005 along with Candace Risen and Stanley Althof

2006 SSTAR Book Award for The Handbook of Clinical Sexuality for Mental Health Professionals: Exceptional Merit

2018—Albert Marquis Lifetime Achievement Award from Marquis Who’s Who. (Exceling in one’s field for at least twenty years)

## Professional Societies

1971- American Psychiatric Association; fellow; #19909

2005- American Psychiatric Association, Distinguished Life Fellow

1973- Cleveland Psychiatric Society

1973- Cleveland Medical Library Association

- 1985 - Life Fellow
- 2003 - Distinguished Life Fellow

1974-Society for Sex Therapy and Research

- 1987-89-President

1983- International Academy of Sex Research

1983- Harry Benjamin International Gender Dysphoria Association

- 1997-8 Chairman, Standards of Care Committee

1994- 1999 Society for Scientific Study of Sex

## **Community Boards**

1999-2002 Case Western Reserve University Medical Alumni Association

1996-2001 Bellefaire Jewish Children's Bureau

1999-2001 Physicians' Advisory Committee, The Gathering Place (cancer rehabilitation)

## **Editorial Boards**

1978-80 Book Review Editor Journal Sex and Marital Therapy

### **Manuscript Reviewer for:**

- a. Archives of Sexual Behavior
- b. Annals of Internal Medicine
- c. British Journal of Obstetrics and Gynecology
- d. JAMA
- e. Diabetes Care
- f. American Journal of Psychiatry
- g. Maturitas
- h. Psychosomatic Medicine
- i. Sexuality and Disability
- j. Journal of Nervous and Mental Diseases
- k. Journal of Neuropsychiatry and Clinical Neurosciences
- l. Neurology
- m. Journal Sex and Marital Therapy
- n. Journal Sex Education and Therapy
- o. Social Behavior and Personality: an international journal (New Zealand)
- p. International Journal of Psychoanalysis
- q. International Journal of Transgenderism
- r. Journal of Urology
- s. Journal of Sexual Medicine
- t. Current Psychiatry
- u. International Journal of Impotence Research
- v. Postgraduate medical journal
- w. Academic Psychiatry

### **Prospectus Reviewer**

- a. Guilford
- b. Oxford University Press
- c. Brunner/Routledge
- d. Routledge

### **Administrative Responsibilities**

Principal Investigator of approximately 70 separate studies involving pharmacological interventions for sexual dysfunction since 1989.

Co-leader of case conferences at DELRLLC.com

### **Expert testimony at trial or by deposition within the last 4 years**

Provided expert testimony for Massachusetts Dept. of Corrections in its defense of a lawsuit brought by prisoner Katheena Soneeya, including by deposition in October 2018, and in-court testimony in 2019.

Provided expert testimony by deposition and at trial in *In the Interests of the Younger Children* (Dallas, TX), 2019.

Testified in an administrative hearing in *In the matter of Rhys & Lynn Crawford* (Washington State), March 2021.

Testified multiple times in juvenile court in *In the matter of Asha Kerwin* (Tucson, Arizona), 2021.

Provided expert testimony by deposition in *Kadel et al v. Folwell et al.* (North Carolina), 2021.

### **Consultancies**

Massachusetts Department of Corrections—evaluation of 12 transsexual prisoners and the development of a Gender Identity Disorders Program for the state prison system. Monthly consultation with the GID treatment team since February 2009 and the GID policy committee since February 2010.

California Department of Corrections and Rehabilitation; 2012-2015; education, inmate evaluation, commentary on inmate circumstances, suggestions on future policies.

Virginia Department of Corrections —evaluation of an inmate.

New Jersey Department of Corrections—evaluation of an inmate.

Idaho Department of Corrections—workshop 2016.

### **Grant Support/Research Studies**

TAP—studies of Apomorphine sublingual in treatment of erectile dysfunction.

Pfizer—Sertraline for premature ejaculation.

Pfizer—Viagra and depression; Viagra and female sexual dysfunction; Viagra as a treatment for SSRI-induced erectile dysfunction.

NIH- Systemic lupus erythematosus and sexuality in women.

Sihler Mental Health Foundation

- a. Program for Professionals
- b. Setting up of Center for Marital and Sexual Health
- c. Clomipramine and Premature ejaculation
- d. Follow-up study of clergy accused of sexual impropriety
- e. Establishment of services for women with breast cancer

Alza—controlled study of a novel SSRI for rapid ejaculation.

Pfizer—Viagra and self-esteem.

Pfizer- double-blind placebo control studies of a compound for premature ejaculation.

Johnson & Johnson – controlled studies of Dapoxetine for rapid ejaculation.

Proctor and Gamble: multiple studies to test testosterone patch for post menopausal sexual dysfunction for women on and off estrogen replacement.

Lilly-Icos—study of Cialis for erectile dysfunction.

VIVUS – study for premenopausal women with FSAD.

Palatin Technologies- studies of bremelanotide in female sexual dysfunction—first intranasal then subcutaneous administration.

Medtap – interview validation questionnaire studies.

HRA- quantitative debriefing study for Female partners of men with premature ejaculation, Validation of a New Distress Measure for FSD.

Boehringer-Ingelheim- double blind and open label studies of a prosexual agent for hypoactive female sexual desire disorder.

Biosante- studies of testosterone gel administration for post menopausal women with HSDD.

J&J a single-blind, multi-center, in home use study to evaluate sexual enhancement effects of a product in females.

UBC-Content validity study of an electronic FSEP-R and FSDD-DAO and usability of study PRO measures in premenopausal women with FSAD, HSDD or Mixed FSAD/HSDD.

National registry trial for women with HSDD.

Endoceutics—two studies of DHEA for vaginal atrophy and dryness in post menopausal women.

Palatin—study of SQ Bremelanotide for HSDD and FSAD.

Trimel- a double-blind, placebo controlled study for women with acquired female orgasmic disorder.

S1 Biopharma- a phase 1-B non-blinded study of safety, tolerability and efficacy of Lorexys in premenopausal women with HSDD.

HRA – qualitative and cognitive interview study for men experiencing PE.

## Publications

### A) Books

- 1) Pariser SR, Levine SB, McDowell M (eds.), Clinical Sexuality, Marcel Dekker, New York, 1985
- 2) Sex Is Not Simple, Ohio Psychological Publishing Company, 1988; Reissued in paperback as: Solving Common Sexual Problems: Toward a Problem Free Sexual Life, Jason Aronson, Livingston, NJ. 1997

## I. Background & Credentials

1. I am a clinical psychologist and Director of the Toronto Sexuality Centre in Canada. For my education and training, I received my Bachelor of Science degree from Rensselaer Polytechnic Institute, where I studied mathematics, physics, and computer science. I received my Master of Arts degree in psychology from Boston University, where I studied neuropsychology. I earned my Doctoral degree in psychology from McGill University, which included successfully defending my doctoral dissertation studying the effects of psychiatric medication and neurochemical changes on sexual behavior, and included a clinical internship assessing and treating people with a wide range of sexual and gender identity issues.

2. Over my academic career, my posts have included Psychologist and Senior Scientist at the Centre for Addiction and Mental Health (CAMH) and Head of Research for CAMH's Sexual Behaviour Clinic, Associate Professor of Psychiatry on the University of Toronto Faculty of Medicine, and Editor-in-Chief of the peer reviewed journal, *Sexual Abuse*. That journal is one of the top-impact, peer-reviewed journals in sexual behavior science and is the official journal of the Association for the Treatment of Sexual Abusers. In that appointment, I was charged to be the final arbiter for impartially deciding which contributions from other scientists in my field merited publication. I believe that appointment indicates not only my extensive experience evaluating scientific claims and methods, but also the faith put in me by the other scientists in my field. I have also served on the Editorial Boards of the *Journal of Sex Research*, the *Archives of Sexual Behavior*, and *Journal of Sexual Aggression*. Thus, although I cannot speak for other scientists, I regularly interact with and am routinely exposed to the views and opinions of most of the scientists active in our field today, within the United States and throughout the world.

3. My scientific expertise spans the biological and non-biological development of human sexuality, the classification of sexual interest patterns, the assessment and

treatment of atypical sexualities, and the application of statistics and research methodology in sex research. I am the author of over 50 peer-reviewed articles in my field, spanning the development of sexual orientation, gender identity, hypersexuality, and atypical sexualities collectively referred to as *paraphilias*. I am the author of the past three editions of the gender identity and atypical sexualities chapter of the *Oxford Textbook of Psychopathology*. These works are now routinely cited in the field and are included in numerous other textbooks of sex research.

4. I began providing clinical services to people with gender dysphoria in 1998. I trained under Dr. Ray Blanchard of CAMH and have participated in the assessment of treatment of over one hundred individuals at various stages of considering and enacting both transition and detransition, including its legal, social, and medical (both cross-hormonal and surgical) aspects. My clinical experience includes the assessment and treatment of several thousand individuals experiencing other atypical sexuality issues. I am regularly called upon to provide objective assessment of the science of human sexuality by the courts (prosecution and defense), professional media, and mental health care providers.

5. I have served as an expert witness in a total of 14 cases, which are listed in my *curriculum vitae*, attached here as Appendix 1, which includes a list of cases in which I have recently testified.

6. A substantial proportion of the existing research on gender dysphoria comes from two clinics, one in Canada and one in the Netherlands. The CAMH gender clinic (previously, Clarke Institute of Psychiatry) was in operation for several decades, and its research was directed by Dr. Kenneth Zucker. I was employed by CAMH between 1998 and 2018. I was a member of the hospital's adult forensic program. However, I was in regular contact with members of the CAMH child psychiatry program (of which Dr. Zucker was a member), and we collaborated on multiple projects.

7. For my work in this case, I am being compensated at the hourly rate of \$400 per hour. My compensation does not change based on the conclusions and opinions that I provide here or later in this case or on the outcome of this lawsuit.

## II. Introduction

8. The principal opinions that I offer and explain in detail in this report are:
  - a. Biological sex is a clear, scientifically valid, and well-defined category. The existence of disorders of sexual development in an extremely small proportion of individuals does not change this.
  - b. Neither early-onset (childhood) gender dysphoria nor adolescent-onset gender dysphoria can be assumed to reflect a fixed aspect of a person's psychological make-up or self-perception.
  - c. No study has demonstrated that "affirming" the transgender identity of a child or adolescent produces better mental health outcomes or reduced suicidality relative to psychotherapy and mental health support.
  - d. On the contrary, the contemporary studies have failed to find improved mental health in teens and young adults after administration of puberty blockers and/or cross-sex hormones.
  - e. e) Affirmation of a transgender identity in minors who suffer from early-onset or adolescent-onset gender dysphoria is not an accepted "standard of care."

In addition, I have been asked to provide an expert opinion on how relevant professional organizations have addressed these questions and whether any of them have taken any meritorious position that would undermine West Virginia's Protect Women's Sports Act (H.B. 3292) ("Act"). As I explain in detail in this report, it is my opinion that Plaintiffs' expert reports display a wide variety of flaws that call their conclusions into question and that no professional organization has articulated a meritorious position that calls into question the basis for the Act.

9. To prepare the present report, I reviewed the following resources related to this litigation:

- a. West Virginia's Protect Women's Sports Act, H.B. 3293.
- b. The Amended Complaint in this litigation.
- c. Ms. Armistead's Declaration, Doc. 95-1.
- d. Declaration and Expert Report of Deanna Adkins, MD.
- e. Expert Report and Declaration of Joshua D. Safer, MD, FACP, FACE.

### III. Clarifying Terms

10. Most scientific discussions begin with the relevant vocabulary and definitions of terms. In the highly polarized and politicized debates surrounding transgender issues, that is less feasible: Different authors have used terms in differing, overlapping ways. Activists and the public (especially on social media) will use the same terms, but to mean different things, and some have actively misapplied terms so that original documents appear to assert something they do not.

11. "Gender expression" is one such term. For another example, the word "child" is used in some contexts to refer specifically to children before puberty; in some contexts, to refer to children before adolescence (thus including ages of puberty); in still other contexts, to refer to people under the legal age of consent, which is age sixteen in the Netherlands (where much of the research was conducted) or age eighteen in much of North America. Thus, care should be taken in both using and interpreting the word "child" in this field.

12. Because the present document is meant to compare the claims made by others, it is the definitions used by those specific authors in those specific contexts which are relevant. Thus, definitions to my own uses of terms are provided where appropriate, but primarily explicate how terms were defined and used in their original contexts.

#### IV. Evidence Cited by Plaintiffs' Expert Reports

13. Dr. Adkins claimed a person's gender identity cannot be voluntarily changed. In actual clinical practice, that is rarely the relevant issue. The far more typical situation is youth who are *mistaken* about their gender identity. These youth are misinterpreting their experiences to indicate they are transgender, or they are exaggerating their descriptions of their experiences in service of attention-seeking or other psychological needs. Dr. Adkins' claim is not merely lacking any science to support it; the claim itself defies scientific thinking. In science, it is not possible to know that gender identity cannot be changed: We can know only that we lack evidence of such a procedure. In the scientific method, it remains eternally possible for evidence of such a treatment to emerge, and unlike sexual orientation's long history with conversion therapy, there have not been systematic attempts to change gender identity.

14. Dr. Adkins claimed that untreated gender dysphoria can result in several mental health issues, including suicidality. The relevant research on suicidality is summarized in its own section to follow. Nonetheless, Dr. Adkins' claim is a misleading half-truth: Missing is that people with gender dysphoria continue to experience those mental health symptoms even after they do transition, including a 19 times greater risk of death from suicide.<sup>1</sup> This is why clinical guidelines repeatedly indicate that mental health issues should be resolved *before* any transition, as indicated in multiple sets of clinical guidelines, summarized in their own section to follow. As emphasized even by authorities Dr. Adkins cites herself: Transition should not be relied upon itself to improve mental health status.

15. Adkins' support for the claim that untreated gender dysphoria lessens mental health consisted of two articles: Olson, *et al.* (2016) and Spack (2012). Such is a terrible misrepresentation of the state of the scientific literature. Although Olson,

---

<sup>1</sup> Dhejne, *et al.*, 2011.

et al., did indeed report that gender dysphoric children showed no mental health differences from the non-transgender control groups, Olson's report turned out to be incorrect. The Olson data were reanalyzed, and after correcting for statistical errors in the original analysis, the data instead showed that the gender dysphoric children under Olson's care *did*, in fact, exhibit significantly lower mental health.<sup>2</sup>

16. I conducted an electronic search of the research literature to identify any responses from the Olson team regarding the Schumm and Crawford re-analysis of the Olson data and was not able to locate any. I contacted Professor Schumm by email on August 22, 2021 to verify that conclusion, to which he wrote there has been: "No response [from Olson]."<sup>3</sup>

17. Adkins also misrepresented the views of Dr. Norman Spack. The article Adkins cited—Spack, 2012—repeatedly emphasized that children with gender dysphoria exhibit very many symptoms of mental illnesses. Spack asserted unambiguously that "Gender dysphoric children who do not receive *counseling* have a high risk of behavioural and emotional problems and psychiatric diagnoses."<sup>4</sup> The wording of Dr. Adkins' report ("gender dysphoria . . . if left untreated") misrepresents Spack so as to suggest Spack was advocating for medical transition to treat the gender dysphoria rather than counseling to treat suicidality and any other mental health issues. Moreover still, missing from Adkins' report was Spack's conclusion that "[m]ental health intervention should persist for the long term, even after surgery, *as patients continue to be at mental health risk, including for suicide*. While the causes of suicide are multifactorial, the possibility cannot be ruled out that some patients unrealistically believe that surgery(ies) solves their psychological distress."<sup>5</sup> Whereas

---

<sup>2</sup> Schumm & Crawford, 2020; Schumm, *et al.*, 2019.

<sup>3</sup> Schumm, email communication, Aug. 22, 2021 (on file with author).

<sup>4</sup> Spack, *et al.*, 2012, at 422, italics added.

<sup>5</sup> Spack, *et al.*, 2013, at 484, italics added

Adkins (selectively) cited Spack to support her insinuation that transition relieves distress, Spack instead explicitly warned against drawing exactly that conclusion.

18. Next, Adkins claimed to have achieved levels of success in her professional clinical practice unlike those reported by anyone anywhere else in the world: “All of my patients have suffered from persistent gender dysphoria, which has been alleviated through clinical appropriate treatment.”<sup>6</sup> It is difficult to evaluate such a bold self-assessment of success. No clinic has published success rates even approximating this. By contrast, the peer-reviewed research literature repeatedly indicates that clients misrepresent themselves to their care-providers, engaging in “image management” so as to appear as having better mental health than they actually do.<sup>7</sup> In the absence of objective evidence, it is not possible to differentiate Adkins’ claims of success from the simpler explanation that she and her patients are telling each other what they want and expect to hear.

19. Adkins referred to the clinical practice guidelines (CPG’s) of three professional societies: the American Association of Pediatrics (AAP), the World Professional Association for Transgender Health (WPATH), and the Endocrine Society. This provides only an incomplete and inaccurate portrayal of the field. I am aware of six rather than three professional societies providing clinical guidelines for the care of gender dysphoric children. They are detailed more fully in their own section of this report. Nonetheless, with the broad exception of the AAP, their statements repeatedly noted:

- Desistance of gender dysphoria occurs in the majority of prepubescent children.
- Mental health issues need to be assessed as potentially contributing factors and need to be addressed before transition.
- Puberty-blocking medication is an experimental, not a routine, treatment.

---

<sup>6</sup> Adkins Report at 5.

<sup>7</sup> Anzani, *et al.*, 2020; Lehmann, *et al.*, 2021.

- Social transition is not generally recommended until after puberty.

Although some other associations have published broad statements of moral support for sexual minorities and against discrimination, they did not include any specific standards or guidelines regarding medical- or transition-related care.

20. Although Adkins referred to them as “widely accepted,” the WPATH and the Endocrine Society guidelines have both been subjected to standardized evaluation, the Appraisal of Guidelines for Research and Evaluation (“AGREE II”) method, as part of an appraisal of all published CPGs regarding sex and gender minority healthcare.<sup>8</sup> Utilizing community stakeholders to set domain priorities for the evaluation, the assessment concluded that the guidelines regarding HIV and its prevention were of high quality, but that “[t]ransition-related CPGs tended to lack methodological rigour and rely on patchier, lower-quality primary research.”<sup>9</sup> Neither the Endocrine Society’s or WPATH’s guidelines were recommended for use. Indeed, the WPATH guidelines received unanimous ratings of “Do not recommend.”<sup>10</sup>

21. Immediately following the publication of the AAP policy, I conducted a point-by-point fact-check of the claims it asserted and the references it cited in support. I submitted that to the *Journal of Sex & Marital Therapy*, a well-known research journal of my field, where it underwent blind peer review and was published. I append that article as part of this report. See Appendix 2. A great deal of published attention ensued; however, the AAP has yet to respond to the errors I demonstrated its policy contained. Writing for *The Economist* about the use of puberty blockers, Helen Joyce asked AAP directly, “Has the AAP responded to Dr Cantor? If not, have you any response now?” The AAP Media Relations Manager, Lisa Black, responded: “We do not have anyone available for comment.”

<sup>8</sup> Dahlen, *et al.*, 2021.

<sup>9</sup> Dahlen, *et al.*, 2021, at 6.

<sup>10</sup> Dahlen, *et al.*, 2021, at 7.

22. Finally, the clinical guidelines from all these associations have become largely outdated. As detailed in the *Studies of Transition Outcomes* section of this report, there was some reason, circa 2010, to expect positive outcomes among children who transition, owing to optimistic findings reported from the Netherlands.<sup>11</sup> Early positive findings, however, have been retracted after statistical errors were identified,<sup>12</sup> or shown to be more attributable to mental health counseling rather than to medical transition.<sup>13</sup> The professional societies' statements were produced during that earlier phase.

23. In contrast with these U.S.-based associations, public healthcare systems throughout the world have instead been withdrawing their earlier support for childhood transition, responding to the increasingly recognized risks associated with hormonal interventions and the now clear lack of evidence that medical transition was benefitting most children, as opposed to the mental health counseling accompanying transition. These have included Sweden<sup>14, 15</sup>, Finland<sup>16, 17</sup>, and the United Kingdom<sup>18</sup>, and the Royal Australian and New Zealand College of Psychiatrists.<sup>19</sup>

24. Adkins repeatedly claimed success on the basis of what her patients tell her. In the absence of any systematic method, however, it is not possible to evaluate to what extent such a conclusion reflects human recall bias, cases of negative outcomes dropping out of treatment thus becoming invisible to Adkins, the aforementioned impression management efforts of clients, psychotherapy that they were receiving at the same time, or simple maturation during which the patients

<sup>19</sup> McCall, 2021.

would have experienced improved mental health regardless of transition. Indeed, the very purpose of engaging in systematic, peer-reviewed research instead of relating anecdotal recollections is to rule out exactly these biases.

25. Adkins referred to disorders of sexual development (DSDs) and intersex variations to claim that the very notion of there being two sexes is inherently flawed (*i.e.*, challenging “singular biological sex”). Although they both potentially involve medical alteration of genitalia, these are not comparable issues. DSDs and intersex conditions develop before birth, and objective medical testing is capable of confirming diagnoses. Her claims not only misrepresent the research literature on DSDs, but also failed to engage the relevant scientific concept, “construct validity.” Adkins claimed DSD prevalences of 1 in 1000 live births and 1 in 300 people in the world (Adkins Report at 11), leaving unclear how there could be a larger proportion of such people living in the world than are born in the first place. The scientific literature, however, shows that DSDs are much rarer than this<sup>20</sup> and that the very large majority of DSDs are the hypospadias—mislocations of the urethra on the penis.<sup>21</sup> Because of the biological processes involved in causing them, hypospadias are classified as disorders of sexual development. That some boys are born with mislocated urethra is falsely taken by Adkins to demonstrate that ‘there are more than just boys and girls’.

26. Overall, Adkins’ argument was that, because there exist exceptions among features which distinguish male from female, the distinction itself is entirely moot. Although she did not use the term, Adkins is claiming that the existence of these exceptions demonstrates that sex lacks “construct validity.” Her argument does not, however, follow from how construct validity is determined in science—very many scientific classification systems include exceptions. Scientific constructs are not

---

<sup>20</sup> Sax, 2002.

<sup>21</sup> Bancroft, 2009.

determined by any one of the components it reflects, in this case being each of the sex chromosomes, sex hormones, sexually dimorphic genitalia, etc. Rather, such constructs are represented by the generalizable interrelationships among its multiple components. Notwithstanding exceptions in an individual component in an individual case, the interrelationships among the network of components remains intact. The existence of people born with a clubfoot or undeveloped leg does not challenge the classification of humans as a bipedal species.

27. Similarly to Dr. Adkins, Dr. Safer claimed that “gender identity is durable and cannot be changed by medical intervention,” providing no evidence or reference to the research literature. It is not at all apparent upon what basis such a statement about durability can be made, however. It has been the unanimous conclusion of every follow-up study of gender dysphoric children ever conducted, not only that gender identity does change, but also that it changes in the large majority of cases, as documented below. This is, of course, very different from what is reported by transgender adults—they are the very people for whom gender dysphoria did endure. Regarding responses to clinical intervention, I am not aware of, and Safer did not cite any research reports of medical interventions attempting to change gender identity, regardless of outcome. It is not clear whether Safer intended this comment to apply also to psychological/non-medical interventions.

## **V. Evidence Missing from Plaintiffs’ Expert Reports**

28. One of the most widespread public misunderstandings about transsexualism and people with gender dysphoria is that all cases of gender dysphoria represent the same phenomenon; however, the clinical science has long and consistently demonstrated that gender dysphoric children (cases of *early-onset* gender dysphoria) do not represent the same phenomenon as adult gender dysphoria

(cases of *late-onset* gender dysphoria),<sup>22</sup> merely attending clinics at younger ages. That is, gender dysphoric children are not simply younger versions of gender dysphoric adults. They differ in every known regard, from sexual interest patterns, to responses to treatments. A third presentation has recently become increasingly observed among people presenting to gender clinics: These cases appear to have an onset in adolescence in the absence of any childhood history of gender dysphoria. Such cases have been called adolescent-onset or “rapid-onset” gender dysphoria (ROGD).

29. In the context of school athletics, the adult-onset phenomenon would not seem relevant; however, very many public misunderstandings and expert misstatements come from misattributing evidence or personal experience from one of these types to the other. For example, there exist only very few cases of transition regret among adult transitioners, whereas the research has unanimously shown that the majority of children with gender dysphoria desist—that is, cease to experience such dysphoria by or during puberty. A brief summary of the adult-onset phenomenon is included, to facilitate distinguishing features which are unique to childhood gender dysphoria.

### **A. Adult-Onset Gender Dysphoria**

30. People with adult-onset gender dysphoria typically attend clinics requesting transition services in mid-adulthood, usually in their 30s or 40s. Such individuals are nearly exclusively male.<sup>23</sup> They typically report being sexually attracted to women and sometimes to both men and women. Some cases profess asexuality, but very few indicate any sexual interest in or behavior involving men.<sup>24</sup> Cases of adult-onset gender dysphoria are typically associated with a sexual interest pattern (medically, a *paraphilia*) involving themselves in female form.<sup>25</sup>

---

<sup>22</sup> Blanchard, 1985.

<sup>23</sup> Blanchard, 1990, 1991.

<sup>24</sup> Blanchard, 1988.

<sup>25</sup> Blanchard 1989a, 1989b, 1991.

## 1. Outcome Studies of Transition in Adult-Onset Gender Dysphoria

31. Clinical research facilities studying gender dysphoria have repeatedly reported low rates of regret (less than 3%) among adult-onset patients who underwent complete transition (*i.e.*, social, plus hormonal, plus surgical transition). This has been widely reported by clinics in Canada,<sup>26</sup> Sweden,<sup>27</sup> and the Netherlands.<sup>28</sup>

32. Importantly, each of the Canadian, Swedish, and Dutch clinics for adults with gender dysphoria all performed “gate-keeping” procedures, disqualifying from medical services people with mental health or other contraindications. One would not expect the same results to emerge in the absence of such gate-keeping or when gate-keepers apply only minimal standards or cursory assessment.

## 2. Mental Health Issues in Adult-Onset Gender Dysphoria

33. The research evidence on mental health issues in gender dysphoria indicates it to be different between adult-onset versus adolescent-onset versus prepubescent-onset types. The co-occurrence of mental illness with gender dysphoria in adults is widely recognized and widely documented.<sup>29</sup> A research team in 2016 published a comprehensive and systematic review of all studies examining rates of mental health issues in transgender adults.<sup>30</sup> There were 38 studies in total. The review indicated that many studies were methodologically weak, but nonetheless concluded (1) that rates of mental health issues among people are highly elevated both before and after transition, (2) but that rates were less elevated among those who completed transition. Analyses were not conducted in a way so as to compare the elevation in mental health issues observed among people newly attending clinics to improvement after transition. Also, several studies showed more than 40% of patients

---

<sup>26</sup> Blanchard, *et al.*, 1989.

<sup>28</sup> Wiepjes, *et al.*, 2018.

<sup>29</sup> See, *e.g.*, Hepp, *et al.*, 2005.

<sup>30</sup> Dhejne, *et al.*, 2016.

becoming “lost to follow-up.” With attrition rates that high, it is unclear to what extent the information from the available participants genuinely reflects the whole sample. The very high “lost to follow-up” rate leaves open the possibility of considerably more negative results overall.

34. An important caution applies to interpreting these results: These very high proportions of mental health issues come from people who are attending a clinic for the first time and are undergoing assessment. Clinics serving a “gate-keeper” role divert candidates with mental health issues away from medical intervention. The side-effect of removing these people from the samples of transitioners is that if a researcher compared the average mental health of individuals coming into the clinic with the average mental health of individuals going through medical transition, then the post-transition group would appear to show a substantial improvement, even though transition had *no effect at all*: The removal of people with poorer mental health created the statistical illusion of improvement among the remaining people.

35. The long-standing and consistent finding that gender dysphoric adults have high rates of mental health issues both before and after transition and the finding that those mental health issues cause the gender dysphoria (the epiphenomenon) rather than the other way around indicate a critical point: To the extent that gender dysphoric children resemble adults, we should not expect mental health to improve as a result of transition. Mental health issues should be resolved before any transition.

## B. Childhood Onset (Pre-Puberty) Gender Dysphoria

### 1. Prospective Studies of Childhood-Onset Gender Dysphoria Show that Most Children Desist in the “Natural Course” by Puberty

36. The large majority of childhood onset cases of gender dysphoria occur in biological males, with clinics reporting 2–6 biological male children to each female.<sup>31</sup>

37. Prepubescent children (and their parents) have been approaching mental health professionals for help with their unhappiness with their sex and belief they would be happier living as the other for many decades. Projects following-up and reporting on such cases began being published in the 1970s, with subsequent generations of research employing increasingly sophisticated methods studying the outcomes of increasingly large samples. In total, there have now been a total of 11 such outcomes studies. *See* the appendix to Appendix 2 (listing these studies).

38. In sum, despite coming from a variety of countries, conducted by a variety of labs, using a variety of methods, all spanning four decades, every study without exception has come to the identical conclusion: Among prepubescent children who feel gender dysphoric, the majority cease to want to be the other gender over the course of puberty—ranging from 61–88% desistance across the large, prospective studies. Such cases are often referred to as “desisters,” whereas children who continue to feel gender dysphoria are often called “persisters.”

39. Notably, in most cases, these children were receiving professional psychosocial support across the study period aimed not at affirming cross-gender identification, but at resolving stressors and issues potentially interfering with desistance. While beneficial to these children and their families, the inclusion of therapy in the study protocol represents a complication for the interpretation of the results: That is, it is not possible to know to what extent the observed outcomes (predominant desistance, with a small but consistent occurrence of persistence) were

---

<sup>31</sup> Cohen-Kettenis, *et al.*, 2003; Steensma, *et al.*, 2018; Wood, *et al.*, 2013.

influenced by the psychosocial support, or would have emerged regardless. It can be concluded only that prepubescent children who suffer gender dysphoria and receive psychosocial support focused on issues other than “affirmation” of cross-gender identification do in fact desist in suffering from gender dysphoria, at high rates, over the course of puberty.

40. While the absolute number of those who present as prepubescent children with gender dysphoria and “persist” through adolescence is very small in relation to the total population, persistence in some subjects was observed in each of these studies. Thus, the clinician cannot take either outcome for granted.

41. It is because of this long-established and invariably consistent research finding that desistance is probable, but not inevitable, that the “watchful waiting” method became the standard approach for assisting gender dysphoric children. The balance of potential risks to potential benefits is very different for groups likely to desist versus groups unlikely to desist: If a child is very likely to persist, then taking on the risks of medical transition might be more worthwhile than if that child is very likely to desist in transgender feelings.

42. The consistent observation of high rates of desistance among pre-pubertal children who present with gender dysphoria demonstrates a pivotally important—yet often overlooked—feature: because gender dysphoria so often desists on its own, clinical researchers cannot assume that therapeutic intervention cannot facilitate or speed desistance for at least some patients. Such is an empirical question, and there has not yet been any such study.

43. It is also important to note that research has not yet identified any reliable procedure for discerning which children who present with gender dysphoria will persist, as against the majority who will desist, absent transition and “affirmation.” Such a method would be valuable, as the more accurately that potential persisters can be distinguished from desisters, the better the risks and benefits of options can

be weighted. Such “risk prediction” and behavioral “test construction” are standard components of applied statistics in the behavioral sciences. Multiple research teams have reported that, on average, groups of persisters are somewhat more gender non-conforming than desisters, but not so different as to usefully predict the course of a particular child.<sup>32</sup>

44. In contrast, a single research team, led by Dr. Kristina Olson, claimed the opposite, asserting to have developed a method of distinguishing persisters from desisters, using a single composite score representing a combination of children’s “peer preference, toy preference, clothing preference, gender similarity, and gender identity.”<sup>33</sup> That team reported a statistical association (mathematically equivalent to a correlation) between that composite score and the probability of persistence. As they described their result, “Our model predicted that a child with a gender-nonconformity score of .50 would have roughly a .30 probability . . . of socially transitioning. By contrast, a child with gender-nonconformity score of .75 would have roughly a .48 probability.”<sup>34</sup> Although the authors declared that “social transitions may be predictable from gender identification and preferences,”<sup>35</sup> their actual results suggest the opposite: The gender-nonconforming group who went on to transition (socially) had a mean composite score of .73 (which is less than .75), and the gender-nonconforming group who did not transition had a mean composite score of .61, also less than .75.<sup>36</sup> Both of those are lower than the value of .75, so both of those would be more likely than not to desist, rather than to proceed to transition. Thus, Olson’s model does not distinguish likely from unlikely to transition; rather, it distinguishes unlikely from even less likely to transition.

---

<sup>32</sup> Singh, *et al.* (2021); Steensma *et al.*, 2013.

<sup>33</sup> Rae, *et al.*, 2019, at 671.

<sup>34</sup> Rae, *et al.*, 2019, at 673.

<sup>35</sup> Rae, *et al.*, 2019, at 669.

<sup>36</sup> Rae, *et al.*, 2019, Supplemental Material at 6, Table S1, bottom line.

45. Although it remains possible for some future finding to yield a method to identify with sufficient accuracy which gender dysphoric children will persist, there does not exist such a method at the present time. Moreover, in the absence of long-term follow-up, it cannot be known what proportions come to regret having transitioned and then *detransition*. Because only a minority of gender dysphoric children persist in feeling gender dysphoric in the first place, “transition-on-demand” increases the probability of unnecessary transition and unnecessary medical risks.

## 2. “Watchful Waiting” and “The Dutch Approach”

46. It was this state of the science—that the majority of prepubescent children will desist in their feelings of gender dysphoria and that we lack an accurate method of identifying which children will persist—that led to the development of a clinical approach, often called “The Dutch Approach” (referring to The Netherlands clinic where it was developed) including “Watchful Waiting” periods. Internationally, the Dutch Approach is currently the most widely respected and utilized method for treatment of children who present with gender dysphoria.

47. The purpose of these methods was to compromise the conflicting needs among: clients’ desires upon assessment, the long-established and repeated observation that those preferences will change in the majority of (but not all) childhood cases, and that cosmetic aspects of medical transition are perceived to be better when they occur earlier rather than later.

48. The Dutch Approach (also called the “Dutch Protocol”) was developed over many years by the Netherlands’ child gender identity clinic, incorporating the accumulating findings from their own research as well as those reported by other clinics working with gender dysphoric children. They summarized and explicated the approach in their peer-reviewed report, *Clinical management of gender dysphoria in children and adolescents: The Dutch Approach* (de Vries & Cohen-Kettenis, 2012).

The components of the Dutch Approach are:

- no social transition at all considered before age 12 (watchful waiting period),
- no puberty blockers considered before age 12,
- cross-sex hormones considered only after age 16, and
- resolution of mental health issues before any transition.

49. For youth under age 12, “the general recommendation is watchful waiting and carefully observing how gender dysphoria develops in the first stages of puberty.”<sup>37</sup>

50. The age cut-offs of the Dutch Approach authors were not based on any research demonstrating their superiority over other potential age cut-offs. Rather, they were chosen to correspond to ages of consent to medical procedures under Dutch law. But whatever their original rationale, the data from this clinic simply contains no information about safety or efficacy of these measures at younger ages.

51. The authors of the Dutch Approach repeatedly and consistently emphasize the need for extensive mental health assessment, including clinical interviews, formal psychological testing with validated psychometric instruments, and multiple sessions with the child and the child’s parents.

52. Within the Dutch approach, there is no social transition before age twelve. That is, social affirmation of the new gender may not begin until age 12—as desistance is less likely to occur past that age. “Watchful Waiting” refers to a child’s developmental period up to that age. Watchful waiting does not mean do nothing but passively observe the child. Such children and families typically present with substantial distress involving both gender and non-gender issues. It is during the watchful waiting period that a child (and other family members as appropriate) would undergo therapy, resolving other issues which may be exacerbating psychological stress or dysphoria. As noted by the Dutch clinic, “[T]he adolescents in this study received extensive family or other social support . . . [and they] were all regularly

---

<sup>37</sup> de Vries & Cohen-Kettenis, 2012, at 301.

seen by one of the clinic's psychologists or psychiatrists.”<sup>38</sup> One is actively treating the person, while carefully “watching” the dysphoria.

53. The inclusion of psychotherapy and support during the watchful waiting period is, clinically, a great benefit to the gender dysphoric children and their parents. The inclusion of psychotherapy and support poses a scientific complication, however: It becomes difficult to know to what extent the outcomes of these cases might be related to receiving psychotherapy received versus being “spontaneous” desistance, which would have occurred on its own anyway. This situation is referred to in science as a “confound.”

### 3. Studies of Transition Outcomes: Overview

54. Very many strong claims have appeared in the media and on social media asserting that transition results in improved mental health or, contradictorily, in decreased mental health. In the highly politicized context of gender and transgender research, many authors have cited only the findings which appear to support one side, cherry-picking from the complete set of research reports. Seemingly contradictory findings are common in science with on-going research projects. When considered together, however, the full set of relevant reports show that a coherent pattern and conclusion has emerged over time, as detailed in the following sections. Initial optimism was suggested by reports of improvements in mental health.<sup>39</sup> Upon continued analysis, these seeming successes turned out to be illusory, however: The Bränström and Pachankis (2019) finding has been retracted.<sup>40</sup> The greater mental health among transitioners reported by Costa, *et al.* (2015) was noted to be because the control group consisted of cases excluded from hormone eligibility exactly because they showed poor mental health to begin with.<sup>41</sup> The improvements reported by the

<sup>41</sup> Biggs, 2019.

de Vries studies from the Dutch Clinic themselves appear genuine; however, because that clinic also provides psychotherapy to all cases receiving puberty-blockers, it remains entirely plausible that the psychotherapy and not the puberty blockers caused the improvements.<sup>42</sup> New studies continued to appear an accelerating rate, repeatedly reporting deteriorations or lacks of improvement in mental health<sup>43</sup> or lack of improvement beyond psychotherapy alone,<sup>44</sup> and other studies continue to report on only the combined effect of both psychotherapy and hormone treatment together.<sup>45</sup>

**a. Outcomes of The Dutch Approach (studies from before 2017):  
Mix of positive, negative, and neutral outcomes**

55. The research confirms that some, but not all, adolescents improve on some, but not all, indicators of mental health and that those indicators are inconsistent across studies. Thus, the balance of potential benefits to potential risks differs across cases, and thus suggests different courses of treatment across cases.

56. The Dutch clinical research team followed up 70 youth undergoing puberty suppression at their clinic.<sup>46</sup> The youth improved on several variables upon follow-up as compared to pre-suppression measurement, including depressive symptoms and general functioning. No changes were detected in feelings of anxiety or anger or in gender dysphoria as a result of puberty suppression; however, natal females using puberty suppression suffered *increased* body dissatisfaction both with their secondary sex characteristics and with nonsexual characteristics.<sup>47</sup>

57. As the report authors noted, while it is possible that the improvement on some variables was due to the puberty-blockers, it is also possible that the improvement was due to the mental health support, and it is possible that the

<sup>46</sup> de Vries, *et al.* 2011.

<sup>47</sup> Biggs, 2020.

improvement occurred only on its own with natural maturation. So any conclusion that puberty blockers improved the mental health of the treated children is not justified by the data. Because this study did not include a control group (another group of adolescents matching the first group, but *not* receiving medical or social support), these possibilities cannot be distinguished from each other, representing a confound. The authors of the study were explicit in noting this themselves: “All these factors may have contributed to the psychological well-being of these gender dysphoric adolescents.”<sup>48</sup>

58. The authors were careful not to overstate the implications of their results, “We *cautiously* conclude that puberty suppression *may be* a valuable *element* in clinical management of adolescent gender dysphoria.”<sup>49</sup>

59. Costa, *et al.* (2015) reported on preliminary outcomes from the Tavistock and Portman NHS Foundation Trust clinic in the UK. They compared the psychological functioning of one group of youth receiving psychological support with a second group receiving both psychological support as well as puberty blocking medication. Both groups improved in psychological functioning over the course of the study, but no statistically significant differences between the groups was detected at any point.<sup>50</sup> As those authors concluded, “Psychological support and puberty suppression were both associated with an improved global psychosocial functioning in GD adolescence. Both these interventions may be considered effective in the clinical management of psychosocial functioning difficulties in GD adolescence.”<sup>51</sup> Because psychological support does not pose the physical health risks that hormonal interventions or surgery does (such as loss of reproductive function), one cannot justify taking on the greater risks of social transition, puberty blockers or surgery

<sup>51</sup> Costa, *et al.*, at 2206.

without evidence of such treatment producing superior results. Such evidence does not exist.

**b. Clinicians and advocates have invoked the Dutch Approach while departing from its protocols in important ways.**

60. The reports of partial success contained in de Vries, *et al.* 2011 called for additional research, both to confirm those results and to search for ways to maximize beneficial results and minimize negative outcomes. Instead, many other clinics and clinicians proceeded on the basis of the positives only, broadened the range of people beyond those represented in the research findings, and removed the protections applied in the procedures that led to those outcomes. Many clinics and individual clinicians have reduced the minimum age for transition to 10 instead of 12. While the Dutch Protocol involves interdisciplinary teams of clinicians, many clinics now rely on a single assessor, in some cases one without adequate professional training in childhood and adolescent mental health. Comprehensive, longitudinal assessments (*e.g.*, one and a half *years*<sup>52</sup>) became approvals after one or two assessment sessions. Validated, objective measures of youths' psychological functioning were replaced with clinicians' subjective (and first) opinions, often reflecting only the clients' own self-report. Systematic recordings of outcomes, so as to allow for detection and correction of clinical deficiencies, were eliminated.

61. Notably, Dr. Thomas Steensma, central researcher of the Dutch clinic, has decried other clinics for "blindly adopting our research" despite the indications that those results may not actually apply: "We don't know whether studies we have done in the past are still applicable to today. Many more children are registering, and also a different type."<sup>53</sup> Steensma opined that "every doctor or psychologist who is involved in transgender care should feel the obligation to do a good pre- and post-test." But few if any are doing so.

---

<sup>52</sup> de Vries, *et al.*, 2011.

<sup>53</sup> Tetelepta, 2021.

**c. Studies by other clinicians in other countries have failed to reliably replicate the positive components of the results reported by the Dutch clinicians in de Vries et al. 2011.**

62. The indications of potential benefit from puberty suppression in at least some cases has led some clinicians to attempt to replicate the positive aspects of those findings. These efforts have not succeeded.

63. The Tavistock and Portman clinic in the U.K. recently released its findings, attempting to replicate the outcomes reported by the Dutch clinic.<sup>54</sup> Study participants were ages 12–15 (Tanner stages 3 for natal males, Tanner 2 for natal females) and were repeatedly tested before beginning puberty-blocking medications and then every six months thereafter. Cases exhibiting serious mental illnesses (*e.g.*, psychosis, bipolar disorder, anorexia nervosa, severe body-dysmorphic disorder unrelated to gender dysphoria) were excluded. Relative to the time point before beginning puberty suppression, there were *no* significant changes in any psychological measure, from either the patients’ or their parents’ perspective.

64. A multidisciplinary team from Dallas published a prospective follow-up study which included 25 youths as they began puberty suppression.<sup>55</sup> (The other 123 study participants were undergoing cross-sex hormone treatment.) Interventions were administered according to “Endocrine Society Clinical Practice Guidelines.”<sup>56</sup> Their analyses found *no statistically significant changes* in the group undergoing puberty suppression on any of the nine measures of wellbeing measured, spanning tests of body satisfaction, depressive symptoms, or anxiety symptoms.<sup>57</sup> (Although the authors reported detecting some improvements, these were only found when the large group undergoing cross-sex hormone treatment were added in.) Although the Dutch

<sup>57</sup> Kuper, *et al.*, 2020, at Table 2.

Approach includes age 12 as a minimum for puberty suppression treatment, this team provided such treatment beginning at age 9.8 years (full range: 9.8–14.9 years).<sup>58</sup>

65. Achille, *et al.* (2020) at Stony Brook Children’s Hospital in New York treated a sample of 95 youth with gender dysphoria, providing follow-up data on 50 of them. (The report did not indicate how these 50 were selected from the 95.) As well as receiving puberty blocking medications, “Most subjects were followed by mental health professionals. Those that were not were encouraged to see a mental health professional.”<sup>59</sup> The puberty blockers themselves “were introduced in accordance with the Endocrine Society and the WPATH guidelines.”<sup>60</sup> Upon follow-up, some incremental improvements were noted; however, after statistically adjusting for psychiatric medication and engagement in counselling, “*most predictors did not reach statistical significance.*”<sup>61</sup> That is, puberty blockers did not improve mental health any more than did mental health care on its own.

66. In a recent update, the Dutch clinic reported continuing to find improvement in transgender adolescents’ psychological functioning, reaching age-typical levels, “after the start of specialized transgender care involving puberty suppression.”<sup>62</sup> Unfortunately, because the transgender care method of that clinic involves both psychosocial support and puberty suppression, it cannot be known which of those (or their combination) is driving the improvement. Also, the authors indicate that the changing demographic and other features among gender dysphoric youth might have caused the treated group to differ from the control group in unknown ways. As the study authors themselves noted, “The present study can, therefore, not provide

<sup>62</sup> van der Miesen, *et al.*, 2020, at 699.

evidence about the direct benefits of puberty suppression over time and long-term mental health outcomes.”<sup>63</sup>

67. It has not yet been determined why the successful outcomes reported by the Dutch child gender clinic a decade ago failed to emerge when applied by others more recently. It is possible that:

- (1) The Dutch Approach itself does *not* work and that their originally successful results were a fluke;
- (2) The Dutch Approach *does* work, but only in the Netherlands, with local cultural, genetic, or other unrecognized factors that do not generalize to other countries;
- (3) The Dutch Approach itself *does* work, but other clinics and individual clinicians are removing safeguards and adding short-cuts to the approach, and those changes are hampering success.
- (4) The Dutch Approach *does* work, but the cause of the improvement is the psychosocial support, rather than any medical intervention, which other clinics are *not* providing.

68. The failure of other clinics to repeat the already very qualified success of the Dutch clinic demonstrates the need for still greater caution before endorsing transition and the greater need to resolve potential mental health obstacles before doing so.

#### **4. Mental Health Issues in Childhood-Onset Gender Dysphoria**

69. As shown by the outcomes studies, there is no statistically significant evidence that transition reduces the presence of mental illness among transitioners. As shown repeatedly by clinical guidelines from multiple professional associations, mental health issues are expected or required to be resolved *before* undergoing transition. The reasoning behind these conclusions is that children may be expressing gender dysphoria, not because they are experiencing what gender dysphoric adults report, but because they mistake what their experiences indicate or to what they might lead. For example, a child experiencing depression from social

---

<sup>63</sup> van der Miesen, *et al.*, 2020, at 703.

isolation might develop hope—and the unrealistic expectation—that transition will help them fit in, this time as and with the other sex.

70. If a child undergoes transition, discovering only then that their mental health or social situations will not in fact change, the medical risks and side-effects (such as sterilization) will have been borne for no reason. If, however, a child resolves the mental health issues first with the gender dysphoria resolving with it (which the research literature shows to be the case in the large majority), then the child need not undergo transition at all, but yet still retains the opportunity to do so later.

71. Elevated rates of multiple mental health issues among gender dysphoric children are reported throughout the research literature. A formal analysis of children (ages 4–11) undergoing assessment at the Dutch child gender clinic showed 52% fulfilled criteria for a DSM axis-I disorder.<sup>64</sup> A comparison of the children attending the Canadian versus Dutch child gender dysphoria clinic showed only few differences between them, but a large proportion in both groups were diagnosable with clinically significant mental health issues. Results of standard assessment instruments (Child Behavior Check List, or CBCL) demonstrated that the average score was in the clinical rather than healthy range, among children in both clinics.<sup>65</sup> When expressed as percentages, among 6–11-year-olds, 61.7% of the Canadian and 62.1% of the Dutch sample were in the clinical range.

72. A systematic, comprehensive review of all studies of Autism Spectrum Disorders (ASDs) and Attention-Deficit Hyperactivity Disorder (ADHD) among children diagnosed with gender dysphoria was recently conducted. It was able to identify a total of 22 studies examining the prevalence of ASD or ADHD in youth with gender dysphoria. Studies reviewing medical records of children and adolescents referred to gender clinics showed 5–26% to have been diagnosed with ASD.<sup>66</sup>

---

<sup>64</sup> Wallien, *et al.*, 2007.

<sup>65</sup> Cohen-Kettenis, *et al.*, 2003, at 46.

<sup>66</sup> Thrower, *et al.*, 2020.

Moreover, those authors gave specific caution on the “considerable overlap between symptoms of ASD and symptoms of gender variance, exemplified by the subthreshold group which may display symptoms which could be interpreted as either ASD or gender variance. Overlap between symptoms of ASD and symptoms of GD may well confound results.”<sup>67</sup> When two or more issues are present at the same time (in this case, gender dysphoria present at the same time as ADHD or ASD), researchers cannot distinguish when a result is associated with or caused by the issue of interest (gender dysphoria itself) or one of the side issues, called *confounds* (ADHD or ASD, in the present case).<sup>68</sup> The rate of ADHD among children with GD was 8.3–11%. Conversely, in data from children (ages 6–18) with Autism Spectrum Disorders (ASDs) show they are more than seven times more likely to have parent-reported “gender variance.”<sup>69</sup>

### C. Adolescent-Onset Gender Dysphoria

#### 1. Features of Adolescent-Onset Gender Dysphoria

73. A third profile has begun to present to clinicians or socially, characteristically distinct from the previously identified ones.<sup>70</sup> Unlike adult-onset gender dysphoria (and also unlike childhood-onset, *see supra* Part IV.B.2), this group is predominately biologically female. This group first presents in adolescence, but lacks the history of cross-gender behavior in childhood like the childhood-onset cases have. It is this feature which led to the term Rapid Onset Gender Dysphoria (ROGD).<sup>71</sup> The majority of cases appear to occur within clusters of peers and in association with increased social media use<sup>72</sup> and especially among people with autism or other neurodevelopmental or mental health issues.<sup>73</sup>

<sup>67</sup> Thrower, *et al.*, 2020, at 703.

<sup>68</sup> Cohen-Kettenis *et al.*, 2003, at 51; Skelly *et al.*, 2012.

<sup>69</sup> Janssen, *et al.*, 2016.

<sup>70</sup> Kaltiala-Heino, *et al.*, 2015; Littman, 2018.

<sup>71</sup> Littman, 2018.

<sup>72</sup> Littman, 2018.

<sup>73</sup> Kaltiala-Heino, *et al.*, 2015; Littman, 2018; Warrier, *et al.*, 2020.

74. It cannot be easily determined whether the self-reported gender dysphoria is a result of other underlying issues or if those mental health issues are the result of the stresses of being a stigmatized minority, as some writers are quick to assume.<sup>74</sup> *See infra* Part VI.E (discussing the minority stress hypothesis). Importantly, and unlike other presentations of gender dysphoria, people with rapid-onset gender dysphoria often (47.2%) experienced *declines* rather than improvements in mental health when they publicly acknowledged their gender status.<sup>75</sup> Although long-term outcomes have not yet been reported, these distinctions argue against generalizing findings from the other types of gender dysphoria to this one. That is, in the absence of evidence, researchers cannot assume that the pattern found in childhood-onset or adult-onset gender dysphoria also applies to rapid-onset (aka adolescent-onset) gender dysphoria. That is, the group differences already observed argue against the conclusion that any given feature would be present, in general, throughout all types of gender dysphoria.

## **2. Prospective Studies of Social Transition and Puberty Blockers in Adolescence**

75. There do not yet exist prospective outcomes studies either for social transition or for medical interventions for people whose gender dysphoria began in adolescence. That is, instead of taking a sample of individuals and following them forward over time (thus permitting researchers to account for people dropping out of the study, people misremembering the order of events, etc.), all studies have thus far been *retrospective*. It is not possible for such studies to identify what factors caused what outcomes. No study has yet been organized in such a way as to allow for an analysis of the adolescent-onset group, as distinct from childhood-onset or adult-onset cases. Many of the newer clinics (not the original clinics systematically tracking and reporting on their case results) fail to distinguish between people who had childhood-

---

<sup>74</sup> Boivin, *et al.*, 2020.

<sup>75</sup> Biggs, 2020; Littman, 2018.

onset gender dysphoria and have aged into adolescence and people whose onset was not until adolescence. Similarly, there are clinics failing to distinguish people who had adolescent-onset gender dysphoria and aged into adulthood from adult-onset gender dysphoria. Studies selecting groups according to their current age instead of their ages of onset can produce only confounded results, representing unclear mixes according to how many of each type of case wound up in the final sample.

### 3. Mental Illness in Adolescent-Onset Gender Dysphoria

76. In 2019, a Special Section of the *Archives of Sexual Behavior* was published: “Clinical Approaches to Adolescents with Gender Dysphoria.” It included this brief yet thorough summary of rates of mental health issues among adolescents expressing gender dysphoria by Dr. Aron Janssen of the Department of Child and Adolescent Psychiatry of New York University.<sup>76</sup> The literature varies in the range of percentages of adolescents with co-occurring disorders. The range for depressive symptoms ranges was 6–42%,<sup>77</sup> with suicide attempts ranging 10 to 45%.<sup>78</sup> Self-injurious thoughts and behaviors range 14–39%.<sup>79</sup> Anxiety disorders and disruptive behavior difficulties including Attention Deficit/Hyperactivity Disorder are also prevalent.<sup>80</sup> Gender dysphoria also overlaps with Autism Spectrum Disorder.<sup>81</sup>

77. Of particular concern in the context of adolescent onset gender dysphoria is *Borderline Personality Disorder* (BPD). The DSM criteria for BPD are:

A pervasive pattern of instability of interpersonal relationships, self-image, and affects, and marked impulsivity beginning by early adulthood and present in a variety of contexts, as indicated by five (or more) of the following:

1. Frantic efforts to avoid real or imagined abandonment. (Note: Do not include suicidal or self-mutilating behaviour covered in Criterion 5.)

<sup>76</sup> Janssen, *et al.*, 2019.

<sup>77</sup> Holt, *et al.*, 2016; Skagerberg, *et al.*, 2013; Wallien, *et al.*, 2007.

<sup>78</sup> Reisner, *et al.*, 2015.

<sup>79</sup> Holt, *et al.*, 2016; Skagerberg, *et al.*, 2013.

<sup>80</sup> de Vries, *et al.*, 2011; Mustanski, *et al.*, 2010; Wallien, *et al.*, 2007.

<sup>81</sup> de Vries, *et al.*, 2010; Jacobs, *et al.*, 2014; Janssen, *et al.*, 2016; May, *et al.*, 2016; Strang, *et al.*, 2014, 2016.

2. A pattern of unstable and intense interpersonal relationship characterized by alternating between extremes of idealization and devaluation.
3. *Identity disturbance: markedly and persistently unstable self-image or sense of self.*
4. Impulsivity in at least two areas that are potentially self-damaging (e.g., spending, sex, substance abuse, reckless driving, binge eating). (Note: Do not include suicidal or self-mutilating behavior covered in Criterion 5.)
5. *Recurrent suicidal behaviour, gestures, or threats, or self-mutilating behavior.*
6. Affective instability due to a marked reactivity of mood (e.g., intense episodic dysphoria, irritability, or anxiety usually lasting a few hours and only rarely more than a few days).
7. Chronic feelings of emptiness.
8. Inappropriate, intense anger or difficulty controlling anger (e.g., frequent displays of temper, constant anger, recurrent physical fights).
9. Transient, stress-related paranoid ideation or severe dissociative symptoms.

(Italics added.)

78. It is increasingly hypothesized that very many cases appearing to be adolescent-onset gender dysphoria are actually cases of BPD.<sup>82</sup> That is, some people may be misinterpreting their experiences to represent a gender identity issue, when it instead represents the “identity disturbance” noted in symptom Criterion 3. Like adolescent-onset gender dysphoria, BPD begins to manifest in adolescence, is substantially more common among biological females than males, and occurs in 2–3% of the population, rather than 1-in-5,000 people (*i.e.*, 0.02%). Thus, if even only a portion of people with BPD had an ‘identity disturbance’ that focused on gender identity and were mistaken for transgender, they could easily overwhelm the number of genuine cases of gender dysphoria.

79. A primary cause for concern is symptom Criterion 5: recurrent suicidality. Regarding the provision of mental health care, this is a crucial distinction: A person with BPD going undiagnosed will not receive the appropriate treatments (the

---

<sup>82</sup> *E.g.*, Zucker, 2019.

currently most effective of which is Dialectical Behavior Therapy). A person with a cross-gender identity would be expected to feel relief from medical transition, but someone with BPD would not: The problem was not about *gender* identity, but about having an *unstable* identity. Moreover, after a failure of medical transition to provide relief, one would predict for these people increased levels of hopelessness and increased risk of suicidality. One would predict also that misdiagnoses would occur more often if one reflexively dismissed or discounted symptoms of BPD as responses to “minority stress.” *See infra* Part VI.D (discussing minority stress).

80. Regarding research, there have now been several attempts to document rates of suicidality among gender dysphoric adolescents. *See infra* Part VI.C. The scientific concern presented by BPD is that it poses a potential confound: samples of gender dysphoric adolescents could appear to have elevated rates of suicidality, not because of the gender dysphoria (or transphobia in society), but because of the number of people with BPD in the sample.

## **VI. Alleged Scientific Claims Assessed**

### **A. Conversion Therapy**

81. Activists and social media increasingly, but erroneously, apply the term “conversion therapy” moving farther and farther from what the research has reported. “Conversion therapy” (or “reparative therapy” and other names) was the attempt to change a person’s sexual orientation; however, with the public more frequently accustomed to “LGB” being expanded to “LGBTQ+”, the claims relevant only to sexual orientation are being misapplied to gender identity. The research has repeatedly demonstrated that once one explicitly acknowledges being gay or lesbian, this is only rarely mistaken. That is entirely unlike gender identity, wherein the great majority of children who declare cross-gender identity cease to do so by puberty, as shown unanimously by every follow-up study ever published. As the field grows increasingly polarized, any therapy failing to provide affirmation-on-demand is

misabeled “conversion therapy.”<sup>83</sup> Indeed, even actions of non-therapists, unrelated to any therapy have been labelled conversion therapy, including the very prohibition of biological males competing on female teams.<sup>84</sup>

## **B. Claims that All Childhood Outcome Studies Are Wrong**

82. As already indicated, the follow-up studies of gender dysphoric children are unanimous in their conclusion that gender dysphoria desists in the large majority of cases. Nonetheless, some authors assert that the entire set of prospective outcomes studies on prepubescent children is wrong; that desistance is not, in fact, the usual outcome for gender dysphoric children; and that results from various retrospective studies are the more accurate picture.<sup>85</sup> As indicated in the responses published from authors of several prospective outcomes studies (and as summarized below), the detractors’ arguments are invalid.<sup>86</sup>

83. There have been accusations that some of the prospective outcome studies are old. This criticism would be valid only if newer studies showed different results from the older studies; however, the findings of desistance are the same, indicating that age of the studies is not, in fact, a factor.

84. There have been accusations that some studies failed to use a DSM diagnosis, and should therefore be rejected. That would be a valid criticism only if studies using the DSM showed different results from studies not using the DSM. Because both kinds of studies showed the same results, one may conclude that DSM status was not a factor, even if using a DSM diagnosis would have been a preferred method.

<sup>83</sup> D’Angelo, R., Syrulnik, E., Ayad, S., Marchiano, L., Kenny, D. T., & Clarke, P. (2021). One size does not fit all: In support of psychotherapy for gender dysphoria. *Archives of Sexual Behavior*, 50, 7–16.

<sup>84</sup> Turban, J. (2021, March 16). Trans girls belong on girls’ sports teams. *Scientific American*.

[www.scientificamerican.com/article/trans-girls-belong-on-girls-sports-teams/](https://www.scientificamerican.com/article/trans-girls-belong-on-girls-sports-teams/)

<sup>85</sup> Temple Newhook, *et al.*, 2018; Winters, *et al.*, 2018.

<sup>86</sup> Steensma, *et al.*, 2018a; Zucker, *et al.* 2018.

85. There have been criticisms that some studies are too small to provide a reliable result. It is indeed true that if larger studies showed different results from the smaller studies, we would tend to favor the results of the larger studies. Because the smaller studies came to the same conclusion as the larger studies, however, the criticism is, once again, entirely moot.

86. There have been accusations that studies did not use the current DSM-5 as their method of diagnosing gender dysphoric children. This criticism would be valid only if there existed any studies using the DSM-5 against which to compare the existing studies. The DSM-5 is still too recent for there yet to have been long-term follow-up studies. It can be seen, however, that the outcome studies are the same across the DSM-III, DSM-III-R, DSM-IV, and DSM-IV-TR.

87. In science, there cannot be any such thing as a perfect study. Especially in medical research, where we cannot manipulate people in ways that would clear up difficult questions, all studies will have a fault. In science, we do not, however, reject every study with any identifiable short-coming—rather, we gather a diversity of observations, made with their diversity of compromises to safety and ethics (and time and cost, etc.), and tentatively accept the most parsimonious (simplest) explanation of the full set, weighting each study according to their individual strengths and weaknesses.

### **C. Assessing Claims of Suicidality**

88. In the absence of scientific evidence associating improvement with transition among youth, demands for transition are increasingly accompanied by hyperbolic warnings of suicide should there be delay or obstacle to affirmation-on-demand. Social media circulate claims of extreme suicidality accompanied by declarations that “I’d rather have a trans daughter than a dead son.” Such claims convey only grossly misleading misrepresentations of the research literature, however.

89. Despite that the media treat them as near synonyms, suicide and suicidality are distinct phenomena. They represent different behaviors with different motivations, with different mental health issues, and with differing clinical needs. *Suicide* refers to completed suicides and the sincere intent to die. It is substantially associated with impulsivity, using more lethal means, and being a biological male.<sup>87</sup> *Suicidality* refers to parasuicidal behaviors, including suicidal ideation, threats, and gestures. These typically represent cries for help rather than an intent to die and are more common among biological females. Suicidal threats can indicate any of many problems or represent emotional blackmail, as typified in “If you leave me, I will kill myself.” Professing suicidality is also used for attention-seeking or for the support or sympathy it evokes from others, indicating distress much more frequently than an intent to die.

90. The scientific study of suicide is inextricably linked to that of mental illness. For example, as noted in the preceding, suicidality is a well-documented symptom of Borderline Personality Disorder (as are chronic identity issues), and personality disorders are highly elevated among transgender populations, especially adolescent-onset. Thus, the elevations of suicidality among gender dysphoric adolescents may not be a result of anything related to transition (or lack of transition), but to the overlap with mental illness of which suicidality is a substantial part. Conversely, improvements in suicidality reported in some studies may not be the result of anything related to transition, but rather to the concurrent general mental health support which is reported by the clinical reported prospective outcomes. Studies that include more than one factor at the same time without accounting for each other represent a “confound,” and it cannot be known which factor (or both) is the one causing the effects observed. That is, when a study provides both mental health

---

<sup>87</sup> Freeman, *et al.*, 2017.

services and medical transition services at the same time, it cannot be known which (or both) is what caused any changes.

91. A primary criterion for readiness for transition used by the clinics demonstrating successful transition is the absence or resolution of other mental health concerns, such as suicidality. In the popular media, however, indications of mental health concerns are instead often dismissed as an expectable result caused by Sexual Minority Stress (SMS). It is generally implied that such symptoms will resolve upon transition and integration into an affirming environment. Dr. Adkins makes it explicit in her report that the purpose of “the medical treatment for gender dysphoria is to eliminate the clinically significant distress.” (Adkins, p. 5.)

92. Despite that relevant professional association statements repeatedly call for mental health issues, including suicidality, to be resolved before transition (see *infra* Section VI), threats of suicide are instead oftentimes used as the very justification for labelling transition a ‘medical necessity’. However plausible it might seem that failing to affirm transition causes suicidality, the epidemiological evidence indicates that hypothesis to be incorrect: Suicide rates remains elevated even after complete transition, as shown by a comprehensive review of 19 studies of suicidality in gender dysphoria.<sup>88</sup>

93. Of particular relevance in the present context is suicidality as a well-documented symptom of Borderline Personality Disorder (BPD) and that very many cases appearing to be adolescent-onset gender dysphoria actually represent cases of BPD. [See full DSM-5 criteria already listed herein.] That is, some people may be misinterpreting their experiencing of the broader “identity disturbance” of symptom Criterion 3 to represent a gender identity issue specifically. Like adolescent-onset gender dysphoria, BPD begins to manifest in adolescence and occurs in 2–3% of the

---

<sup>88</sup> McNeil, et al., 2017.

population, rather than 1-in-5,000 people. (Thus, if even only a portion of people with BPD experienced an identity disturbance that focused on gender identity and were mistaken for transgender, they could easily overwhelm the number of genuine cases of gender dysphoria.)

94. Rates of completed suicide are elevated among post-transition transsexuals, but are nonetheless rare,<sup>89</sup> and BPD is repeatedly documented to be greatly elevated among sexual minorities<sup>90</sup>. Overall, rates of suicidal ideation and suicidal attempts appear to be related—not to transition status—but to the social support received: The research evidence shows that support decreases suicidality, but that transition itself does not. Indeed, in some situations, social support was associated with increased suicide attempts, suggesting the reported suicidality may represent attempts to evoke more support.<sup>91</sup>

#### **D. Assessing Demands for Social Transition and Affirmation-Only or Affirmation-on-Demand Treatment in Pre-Pubertal Children.**

95. Colloquially, affirmation refers broadly to any actions that treat the person as belonging to a new gender. In different contexts, that could apply to social actions (use of a new name and pronouns), legal actions (changes to birth certificates), or medical actions (hormonal and surgical interventions). That is, social transition, legal transition, and medical transition (and subparts thereof) need not, and rarely do, occur at the same time. In practice, there are cases in which a child has socially only partially transitioned, such as presenting as one gender at home and another at school or presenting as one gender with one custodial parent and another gender with the other parent.

96. Referring to “affirmation” as a treatment approach is ambiguous: Although often used in public discourse to take advantage of the positive connotations of the

---

<sup>89</sup> Wiepjes, *et al.*, 2020.

<sup>90</sup> Reuter, *et al.*, 2016; Rodriguez-Seiljas, *et al.*, 2021; Zanarni, *et al.*, 2021.

<sup>91</sup> Bauer, *et al.*, 2015; Canetto, *et al.*, 2021.

term, it obfuscates what exactly is being affirmed. This often leads to confusion, such as quoting a study of the benefits and risks of social affirmation in a discussion of medical affirmation, where the appearance of the isolated word “affirmation” refers to entirely different actions.

97. It is also an error to divide treatment approaches into affirmative versus non-affirmative. As noted already, the widely adopted Dutch Approach (and the guidelines of the multiple professional associations based on it) cannot be said to be either: It is a staged set of interventions, wherein social transition (and puberty blocking) may not begin until age 12 and cross-sex hormonal and other medical interventions, later.

98. Formal clinical approaches to helping children expressing gender dysphoria employ a gate-keeper model, with decision trees to help clinicians decide when and if the potential benefits of affirmation of the new gender would outweigh the potential risks of doing so. Because the gate-keepers and decision-trees generally include the possibility of affirmation in at least some cases, it is misleading to refer to any one approach as “the affirmation approach.” The most extreme decision-tree would be accurately called *affirmation-on-demand*, involving little or no opportunity for children to explore at all whether the distress they feel is due to some other, less obvious, factor, whereas more moderate gate-keeping would endorse transition only in select situations, when the likelihood of regretting transition is minimized.

99. Many outcomes studies have been published examining the results of gate-keeper models, but no such studies have been published regarding affirmation-on-demand with children. Although there have been claims that affirmation-on-demand causes mental health or other improvement, these have been the result only of “retrospective” rather than “prospective” studies. That is, such studies did not take a sample of children and follow them up over time, to see how many dropped out altogether, how many transitioned successfully, and how many transitioned and

regretted it or detransitioned. Rather, such studies took a sample of successfully transitioned adults and asked them retrospective questions about their past. In such studies, it is not possible to know how many other people dropped out or regretted transition, and it is not possible to infer causality from any of the correlations detected, despite authors implying and inferring causality.

100. Olson and colleagues employed exactly such a retrospective study. They offered their survey to children in the TransYouth Project—people who have socially transitioned, their families, and any contacts they had, by word of mouth. This method is referred to as “convenience sampling,” and differs from genuinely representative samples in applying to means of ensuring study participants accurately represent the population being studied. There were three groups of children for comparison: (i) children who had already socially transitioned, (ii) their siblings, and (iii) children in a university database of families interested in participating in child development research. As noted by the study authors, “For the first time, this article reports on socially transitioned gender children’s mental health as reported by the children.”<sup>92</sup> Reports from parents were also recorded.<sup>93</sup> In contrast, no reports or ratings were provided by any mental health care professional or researcher at all. That is, although adding self-assessments to the professional assessments might indeed provide novel insights, this project did not add self-assessment to professional assessment. Rather, it replaced professional assessment with self-assessment. Moreover, as already noted, Olson’s data did not show what the Olson team claimed.<sup>94</sup> The dataset was subsequently re-analyzed, and “[T]o the contrary, the transgender children, even when supported by their parents, had significantly lower average scores on anxiety and self-worth.”<sup>95</sup>

---

<sup>92</sup> Durwood, *et al.*, 2017, at 121 (italics added).

<sup>93</sup> See Olson, *et al.*, 2016.

<sup>94</sup> Schumm, *et al.*, 2019.

<sup>95</sup> Schumm & Crawford, 2020, p. 9

101. It is well established in the field of psychology that participant self-assessment can be severely unreliable for multiple reasons. For example, one well-known phenomenon in psychological research is known as “socially desirable responding”—the tendency of subjects to give answers that they believe will make themselves look good, rather than accurate answers. Specifically, subjects’ reports that they are enjoying good mental health and functioning well could reflect the subjects’ desire to be *perceived* as healthy and as having made good choices, rather than reflecting their actual mental health.

102. In their analyses, the study reported finding no significant differences between the transgender children, their non-transgender siblings, or the community controls. As the authors noted, “[t]hese findings are in striking contrast to previous work with gender-nonconforming children who had not socially transitioned, which found very high rates of depression and anxiety.”<sup>96</sup> The authors are correct to note that their result contrasts with the previous research, but they do not discuss that this could reflect a problem with the novel research design they used: The subjective self-reports of the children and their parents’ reports may not be reflecting reality objectively, as careful professional researchers would. Because the study did not employ any method to detect and control for participants indulging in “socially desirable responding” or acting under other biasing motivations, this possibility cannot be assessed or ruled out.

103. Because this was a single-time study relying on self-reporting, rather than a before-and-after transition study relying on professional evaluation, it is not possible to know if the children reported as well-functioning are in fact well-functioning, nor if so whether they are well-functioning because they were permitted to transition, or whether instead the fact is that they were already well-functioning

---

<sup>96</sup> Durwood, *et al.*, 2017, at 116.

and therefore permitted to transition. Finally, because the TransYouth project lacks a prospective design, it cannot be known how many cases attempted transition, reacted poorly, and then detransitioned, thus never having entered into the study in the first place.

#### **E. Assessing the “Minority Stress Hypothesis”**

104. The elevated levels of mental health problems among lesbian, gay, and bisexual populations is a well-documented phenomenon, and the idea that it is caused by living within a socially hostile environment is called the *Minority Stress Hypothesis*.<sup>97</sup> The association is not entirely straight-forward, however. For example, although lesbian, gay, and bisexual populations are more vulnerable to suicide ideation overall, the evidence specifically on adult lesbian and bisexual women is unclear. Meyer did not include transgender populations in originating the hypothesis, and it remains a legitimate question to what extent and in what ways it might apply to gender identity.

105. Minority stress is associated, in large part, with being a visible minority. There is little evidence that transgender populations show the patterns suggested by the hypothesis. For example, the minority stress hypothesis would predict differences according to how visibly a person is discernable as a member of the minority, which often changes greatly upon transition. Biological males who are very effeminate stand out throughout childhood, but in some cases can successfully blend in as adult females; whereas the adult-onset transitioners blend in very much as heterosexual cis-gendered males during their youth and begin visibly to stand out in adulthood, only for the first time.

106. Also suggesting minority stress cannot be the full story is that the mental health symptoms associated with minority stress do not entirely correspond with

---

<sup>97</sup> Meyer, 2003.

those associated with gender dysphoria. The primary symptoms associated with minority stress are depressive symptoms, substance use, and suicidal ideation.<sup>98</sup> The symptoms associated with gender dysphoria indeed include depressive symptoms and suicidal ideation, but also include anxiety symptoms, Autism Spectrum Disorders, and personality disorders.

## **VII. Assessing Statements from Professional Associations**

### **A. Understanding the Value of Statements from Professional Associations**

107. The value of position statements from professional associations should be neither over- nor under-estimated. In the ideal, an organization of licensed health care professionals would convene a panel of experts who would systematically collect all the available evidence about an issue, synthesizing it into recommendations or enforceable standards for clinical care, according to the quality of the evidence for each alternative. For politically neutral issues, with relevant expertise contained among association members, this ideal can be readily achievable. For controversial issues with no clear consensus, the optimal statement would summarize each perspective and explicate the strengths and weaknesses of each, providing relatively reserved recommendations and suggestions for future research that might resolve the continuing questions. Several obstacles can hinder that goal, however. Committees within professional organizations are typically volunteer activities, subject to the same internal politics of all human social structures. That is, committee members are not necessarily committees of experts on a topic—they are often committees of generalists handling a wide variety of issues or members of an interest group who feel strongly about political implications of an issue, instead of scientists engaged in the objective study of the topic.

---

<sup>98</sup> Meyer, 2003.

108. Thus, documents from professional associations may represent required standards, the violation of which may merit sanctions, or may represent only recommendations or guidelines. A document may represent the views of an association's full membership or only of the committee's members (or majorities thereof). Documents may be based on systematic, comprehensive reviews of the available research or selected portions of the research. In sum, the weight best placed on any association's statement is the amount by which that association employed evidence versus other considerations in its process.

**B. Misrepresentations of statements of professional associations.**

109. In the presently highly politicized context, official statements of professional associations have been widely misrepresented. In preparing the present report, I searched the professional research literature for documentation of statements from these bodies and from my own files, for which I have been collecting such information for many years. I was able to identify statements from six such organizations. Although not strictly a medical association, the World Professional Association for Transgender Health (WPATH) also distributed a set of guidelines in wide use and on which other organizations' guidelines are based.

110. Notably, despite that all these medical associations reiterate the need for mental health issues to be resolved before engaging in medical transition, only the AACAP members have medical training in mental health. The other medical specialties include clinical participation with this population, but their assistance in transition generally assumes the mental health aspects have already been assessed and treated beforehand.

# **1. World Professional Association for Transgender Health (WPATH)**

111. The WPATH standards as they relate to prepubescent children begin with the acknowledgement of the known rates of desistance among gender dysphoric children:

[I]n follow-up studies of prepubertal children (mainly boys) who were referred to clinics for assessment of gender dysphoria, the dysphoria persisted into adulthood for only 6–23% of children (Cohen-Kettenis, 2001; Zucker & Bradley, 1995). Boys in these studies were more likely to identify as gay in adulthood than as transgender (Green, 1987; Money & Russo, 1979; Zucker & Bradley, 1995; Zuger, 1984). Newer studies, also including girls, showed a 12–27% persistence rate of gender dysphoria into adulthood (Drummond, Bradley, Peterson-Badali, & Zucker, 2008; Wallien & Cohen-Kettenis, 2008).<sup>99</sup>

112. That is, “In most children, gender dysphoria will disappear before, or early in, puberty.”<sup>100</sup>

113. Although WPATH does not refer to puberty blocking medications as “experimental,” the document indicates the non-routine, or at least inconsistent availability of the treatment:

Among adolescents who are referred to gender identity clinics, the number considered eligible for early medical treatment—starting with GnRH analogues to suppress puberty in the first Tanner stages—differs among countries and centers. Not all clinics offer puberty suppression. If such treatment is offered, the pubertal stage at which adolescents are allowed to start varies from Tanner stage 2 to stage 4 (Delemarre, van de Waal & Cohen-Kettenis, 2006; Zucker et al., [2012]).<sup>101</sup>

114. WPATH neither endorses nor proscribes social transitions before puberty, instead recognizing the diversity among families’ decisions:

Social transitions in early childhood do occur within some families with early success. This is a controversial issue, and divergent views are held by health professionals. The current evidence base is insufficient to predict the long-term outcomes of completing a gender role transition during early childhood.<sup>102</sup>

115. It does caution, however, “Relevant in this respect are the previously described relatively low persistence rates of childhood gender dysphoria.”<sup>103</sup>

<sup>99</sup> Coleman, *et al.*, 2012, at 172.

<sup>100</sup> Coleman, *et al.*, 2012, at 173.

<sup>101</sup> Coleman, *et al.*, 2012, at 173.

<sup>102</sup> Coleman, *et al.*, 2012, at 176.

<sup>103</sup> Coleman, *et al.*, 2012, at 176 (quoting Drummond, *et al.*, 2008; Wallien & Cohen-Kettenis, 2008).

## 2. Endocrine Society (ES)

116. The 150,000-member Endocrine Society appointed a nine-member task force, plus a methodologist and a medical writer, who commissioned two systematic reviews of the research literature and, in 2017, published an update of their 2009 recommendations, based on the best available evidence identified. The guideline was co-sponsored by the American Association of Clinical Endocrinologists, American Society of Andrology, European Society for Paediatric Endocrinology, European Society of Endocrinology, Pediatric Endocrine Society (PES), and the World Professional Association for Transgender Health (WPATH).

117. The document acknowledged the frequency of desistance among gender dysphoric children:

Prospective follow-up studies show that childhood GD/gender incongruence does not invariably persist into adolescence and adulthood (so-called “desisters”). Combining all outcome studies to date, the GD/gender incongruence of a minority of prepubertal children appears to persist in adolescence. . . . In adolescence, a significant number of these desisters identify as homosexual or bisexual.<sup>104</sup>

118. The statement similarly acknowledges inability to predict desistance or persistence, “With current knowledge, we cannot predict the psychosexual outcome for any specific child.”<sup>105</sup>

119. Although outside their area of professional expertise, mental health issues were also addressed by the Endocrine Society, repeating the need to handle such issues before engaging in transition, “In cases in which severe psychopathology, circumstances, or both seriously interfere with the diagnostic work or make satisfactory treatment unlikely, clinicians should assist the adolescent in managing these other issues.”<sup>106</sup> This ordering—to address mental health issues before embarking on transition—avoids relying on the unproven belief that transition will solve such issues.

<sup>104</sup> Hembree, *et al.*, 2017, at 3876.

<sup>105</sup> Hembree, *et al.*, 2017, at 3876.

<sup>106</sup> Hembree, *et al.*, 2017, at 3877.

120. The Endocrine Society did not endorse any affirmation-only approach. The guidelines were neutral with regard to social transitions before puberty, instead advising that such decisions be made only under clinical supervision: “We advise that decisions regarding the social transition of prepubertal youth are made with the assistance of a mental health professional or similarly experienced professional.”<sup>107</sup>

121. The Endocrine Society guidelines make explicit that, after gathering information from adolescent clients seeking medical interventions and their parents, the clinician “provides correct information to prevent unrealistically high expectations [and] assesses whether medical interventions may result in unfavorable psychological and social outcomes.”<sup>108</sup>

### 3. Pediatric Endocrine Society and Endocrine Society (ES/PES)

122. In 2020, the 1500-member Pediatric Endocrine Society partnered with the Endocrine Society to create and endorse a brief, two-page position statement.<sup>109</sup> Although strongly worded, the document provided no specific guidelines, instead deferring to the Endocrine Society guidelines.<sup>110</sup>

123. It is not clear to what extent this endorsement is meaningful, however. According to the PES, the Endocrine Society “recommendations include evidence that treatment of gender dysphoria/gender incongruence is medically necessary and should be covered by insurance.”<sup>111</sup> However, the Endocrine Society makes neither statement. Although the two-page PES document mentioned insurance coverage four times, the only mention of health insurance by the Endocrine Society was: “If GnRH analog treatment is not available (insurance denial, prohibitive cost, or other reasons), postpubertal, transgender female adolescents may be treated with an

<sup>107</sup> Hembree, *et al.*, 2017, at 3872.

<sup>108</sup> Hembree, *et al.*, 2017, at 3877.

<sup>109</sup> PES, online; Pediatric Endocrine Society & Endocrine Society, Dec. 2020.

<sup>110</sup> Pediatric Endocrine Society & Endocrine Society, Dec. 2020, at 1; Hembree, *et al.*, 2017.

<sup>111</sup> Pediatric Endocrine Society & Endocrine Society, Dec. 2020, at 1.

antiandrogen that directly suppresses androgen synthesis or action.”<sup>112</sup> Despite the PES asserting it as “medically necessary,” the Endocrine Society stopped short of that. Its only use of that phrase was instead limiting: “We recommend that a patient pursue genital gender-affirming surgery only after the MHP and the clinician responsible for endocrine transition therapy both agree that surgery is medically necessary and would benefit the patient’s overall health and/or well-being.”<sup>113</sup>

#### 4. American Academy of Child & Adolescent Psychiatry (AACAP)

124. The 2012 statement of the American Academy of Child & Adolescent Psychiatry (AACAP) is not an affirmation-only policy. It notes:

Just as family rejection is associated with problems such as depression, suicidality, and substance abuse in gay youth, the proposed benefits of treatment to eliminate gender discordance in youth must be carefully weighed against such possible deleterious effects. . . . In general, it is desirable to help adolescents who may be experiencing gender distress and dysphoria to defer sex reassignment until adulthood, or at least until the wish to change sex is unequivocal, consistent, and made with appropriate consent.<sup>114</sup>

125. The AACAP’s language repeats the description of the use of puberty blockers only as an exception: “For situations in which deferral of sex reassignment decisions until adulthood is *not clinically feasible*, one approach that has been described in case series is sex hormone suppression under endocrinological management with psychiatric consultation using gonadotropin-releasing hormone analogues.”<sup>115</sup>

126. The AACAP statement acknowledges the long-term outcomes literature for gender dysphoric children: “In follow-up studies of prepubertal boys with gender discordance—including many without any mental health treatment—the cross gender wishes usually fade over time and do not persist into adulthood,”<sup>116</sup> adding that “[c]linicians should be aware of current evidence on the natural course of gender

<sup>112</sup> Hembree, *et al.* 2017, at 3883.

<sup>113</sup> Hembree, *et al.*, 2017 at 3872, 3894.

<sup>114</sup> Adelson & AACAP, 2012, at 969.

<sup>115</sup> Adelson & AACAP, 2012, at 969 (*italics added*).

<sup>116</sup> Adelson & AACAP, 2012, at 963.

discordance and associated psychopathology in children and adolescents in choosing the treatment goals and modality.”<sup>117</sup>

127. The policy similarly includes a provision for resolving mental health issues: “Gender reassignment services are available in conjunction with mental health services focusing on exploration of gender identity, cross-sex treatment wishes, counseling during such treatment if any, and *treatment of associated mental health problems*.”<sup>118</sup> The document also includes minority stress issues and the need to deal with mental health aspects of minority status (*e.g.*, bullying).<sup>119</sup>

128. Rather than endorse social transition for prepubertal children, the AACAP indicates: “There is similarly no data at present from controlled studies to guide clinical decisions regarding the risks and benefits of sending gender discordant children to school in their desired gender. Such decisions must be made based on clinical judgment, bearing in mind the potential risks and benefits of doing so.”<sup>120</sup>

## **5. American College of Obstetricians & Gynecologists (ACOG)**

129. The American College of Obstetricians & Gynecologists (ACOG) published a “Committee Opinion” expressing recommendations in 2017. The statement indicates it was developed by the ACOG’s Committee on Adolescent Health Care, but does not indicate participation based on professional expertise or a systematic method of objectively assessing the existing research. It includes the disclaimer: “This document reflects emerging clinical and scientific advances as of the date issued and is subject to change. The information should not be construed as dictating an exclusive course of treatment or procedure to be followed.”<sup>121</sup>

---

<sup>117</sup> Adelson & AACAP, 2012, at 968.

<sup>118</sup> Adelson & AACAP, 2012, at 970 (*italics added*).

<sup>119</sup> Adelson & AACAP, 2012, at 969.

<sup>120</sup> Adelson & AACAP, 2012, at 969.

<sup>121</sup> ACOG, 2017, at 1.

130. Prepubertal children do not typically have clinical contact with gynecologists, and the ACOG recommendations include that the client additionally have a primary health care provider.<sup>122</sup>

131. The ACOG statement cites the statements made by other medical associations—European Society for Pediatric Endocrinology (ESPE), PES, and the Endocrine Society—and by WPATH.<sup>123</sup> It does not cite any professional association of *mental* health care providers, however. The ACOG recommendations repeat the previously mentioned eligibility/readiness criteria of having no mental illness that would hamper diagnosis and no medical contraindications to treatment. It notes: “*Before* any treatment is undertaken, the patient must display eligibility and readiness (Table 1), meaning that the adolescent has been evaluated by a mental health professional, has no contraindications to therapy, and displays an understanding of the risks involved.”<sup>124</sup>

132. The “Eligibility and Readiness Criteria” also include, “Diagnosis established for gender dysphoria, transgender, transsexualism.”<sup>125</sup> This standard, requiring a formal diagnosis, forestalls affirmation-on-demand because self-declared self-identification is not sufficient for DSM diagnosis.

133. ACOG’s remaining recommendations pertain only to post-transition, medically oriented concerns. Pre-pubertal social transition is not mentioned in the document, and the outcomes studies of gender dysphoric (prepubescent) children are not cited.

## 6. American College of Physicians (ACP)

134. The American College of Physicians published a position paper broadly expressing support for the treatment of LGBT patients and their families, including

---

<sup>122</sup> ACOG, 2017, at 1.

<sup>123</sup> ACOG, 2017, at 1, 3.

<sup>124</sup> ACOG, 2017, at 1, 3 (citing the Endocrine Society guidelines) (italics added).

<sup>125</sup> ACOG, 2017, at 3 Table 1.

nondiscrimination, antiharassment, and defining “family” by emotional rather than biological or legal relationships in visitation policies, and the inclusion of transgender health care services in public and private health benefit plans.<sup>126</sup>

135. ACP did not provide guidelines or standards for child or adult gender transitions. The policy paper opposed attempting “reparative therapy;” however, the paper confabulated sexual orientation with gender identity in doing so. That is, on the one hand, ACP explicitly recognized that “[s]exual orientation and gender identity are inherently different.”<sup>127</sup> It based this statement on the fact that “the American Psychological Association conducted a literature review of 83 studies on the efficacy of efforts to change *sexual orientation*.”<sup>128</sup> The APA’s document, entitled “Report of the American Psychological Task Force on appropriate therapeutic responses to *sexual orientation*” does not include or reference research on gender identity.<sup>129</sup> Despite citing no research about transgenderism, the ACP nonetheless included in its statement: “Available research does not support the use of reparative therapy as an effective method in the treatment of LGBT persons.”<sup>130</sup> That is, the inclusion of “T” with “LGB” is based on something other than the existing evidence.

136. There is another statement,<sup>131</sup> which was funded by ACP and published in the Annals of Internal Medicine under its “*In the Clinic*” feature, noting that “‘In the Clinic’ does not necessarily represent official ACP clinical policy.”<sup>132</sup> The document discusses medical transition procedures for adults rather than for children, except to note that “[n]o medical intervention is indicated for prepubescent youth,”<sup>133</sup> that a “mental health provider can assist the child and family with identifying an

appropriate time for a social transition,”<sup>134</sup> and that the “child should be assessed and managed for coexisting mood disorders during this period because risk for suicide is higher than in their cisgender peers.”<sup>135</sup>

## **7. American Academy of Pediatrics (AAP)**

137. The policy of the American Academy of Pediatrics (AAP) is unique among the major medical associations in being the only one to endorse an affirmation-on-demand policy, including social transition before puberty without any watchful waiting period. Although changes in recommendations can obviously be appropriate in response to new research evidence, the AAP provided none. Rather, the research studies AAP cited in support of its policy simply did not say what AAP claimed they did. In fact, the references that AAP cited as the basis of their policy instead outright contradicted that policy, repeatedly endorsing watchful waiting.<sup>136</sup> Moreover, of all the outcomes research published, the AAP policy cited *one*, and that without mentioning the outcome data it contained.<sup>137</sup>

## **8. The ESPE-LWPES GnRH Analogs Consensus Conference Group**

138. Included in the interest of completeness, there was also a collaborative report in 2009, between the European Society for Pediatric Endocrinology (ESPE) and the Lawson Wilkins Pediatric Endocrine Society (LWPES).<sup>138</sup> Thirty experts were convened, evenly divided between North American and European labs and evenly divided male/female, who comprehensively rated the research literature on gonadotropin-release hormone analogs in children.

139. The effort concluded that “[u]se of gonadotropin-releasing hormone analogs for conditions other than central precocious puberty requires additional investigation

## EDUCATION

### Postdoctoral Fellowship

Centre for Addiction and Mental Health • Toronto, Canada

Jan., 2000–May, 2004

### Doctor of Philosophy

Psychology • McGill University • Montréal, Canada

Sep., 1993–Jun., 2000

### Master of Arts

Psychology • Boston University • Boston, MA

Sep., 1990–Jan., 1992

### Bachelor of Science

Interdisciplinary Science • Rensselaer Polytechnic Institute • Troy, NY  
Concentrations: Computer science, mathematics, physics

Sep. 1984–Aug., 1988

## EMPLOYMENT HISTORY

### Director

Toronto Sexuality Centre • Toronto, Canada

Feb., 2017–Present

### Senior Scientist (Inaugural Member)

Campbell Family Mental Health Research Institute  
Centre for Addiction and Mental Health • Toronto, Canada

Aug., 2012–May, 2018

### Senior Scientist

Complex Mental Illness Program  
Centre for Addiction and Mental Health • Toronto, Canada

Jan., 2012–May, 2018

### Head of Research

Sexual Behaviours Clinic  
Centre for Addiction and Mental Health • Toronto, Canada

Nov., 2010–Apr. 2014

### Research Section Head

Law & Mental Health Program  
Centre for Addiction and Mental Health • Toronto, Canada

Dec., 2009–Sep. 2012

### Psychologist

Law & Mental Health Program  
Centre for Addiction and Mental Health • Toronto, Canada

May, 2004–Dec., 2011

**Clinical Psychology Intern**

Centre for Addiction and Mental Health • Toronto, Canada

Sep., 1998–Aug., 1999

**Teaching Assistant**

Department of Psychology  
 McGill University • Montréal, Canada

Sep., 1993–May, 1998

**Pre-Doctoral Practicum**

Sex and Couples Therapy Unit  
 Royal Victoria Hospital • Montréal, Canada

Sep., 1993–Jun., 1997

**Pre-Doctoral Practicum**

Department of Psychiatry  
 Queen Elizabeth Hospital • Montréal, Canada

May, 1994–Dec., 1994

**ACADEMIC APPOINTMENTS**

**Associate Professor**

Department of Psychiatry  
 University of Toronto Faculty of Medicine • Toronto, Canada

Jul., 2010–May, 2019

**Adjunct Faculty**

Graduate Program in Psychology  
 York University • Toronto, Canada

Aug. 2013–Jun., 2018

**Associate Faculty (Hon)**

School of Behavioural, Cognitive & Social Science  
 University of New England • Armidale, Australia

Oct., 2017–Dec., 2017

**Assistant Professor**

Department of Psychiatry  
 University of Toronto Faculty of Medicine • Toronto, Canada

Jun., 2005–Jun., 2010

**Adjunct Faculty**

Clinical Psychology Residency Program  
 St. Joseph's Healthcare • Hamilton, Canada

Sep., 2004–Jun., 2010

Agency: Canadian Institutes of Health Research (CIHR)  
Funds: \$196,902 / 3 years (April, 2006)

## KEYNOTE AND INVITED ADDRESSES

1. Cantor, J. M. (2021, September 28). *No topic too tough for this expert panel: A year in review*. Plenary Session for the 40<sup>th</sup> Annual Research and Treatment Conference, Association for the Treatment of Sexual Abusers.
2. Cantor, J. M. (2019, May 1). *Introduction and Q&A for 'I, Pedophile.'* StopSO 2<sup>nd</sup> Annual Conference, London, UK.
3. Cantor, J. M. (2018, August 29). *Neurobiology of pedophilia or paraphilia? Towards a 'Grand Unified Theory' of sexual interests*. Keynote address to the International Association for the Treatment of Sexual Offenders, Vilnius, Lithuania.
4. Cantor, J. M. (2018, August 29). *Pedophilia and the brain: Three questions asked and answered*. Preconference training presented to the International Association for the Treatment of Sexual Offenders, Vilnius, Lithuania.
5. Cantor, J. M. (2018, April 13). *The responses to I, Pedophile from We, the people*. Keynote address to the Minnesota Association for the Treatment of Sexual Abusers, Minneapolis, Minnesota.
6. Cantor, J. M. (2018, April 11). *Studying atypical sexualities: From vanilla to I, Pedophile*. Full day workshop at the Minnesota Association for the Treatment of Sexual Abusers, Minneapolis, Minnesota.
7. Cantor, J. M. (2018, January 20). *How much sex is enough for a happy life?* Invited lecture to the University of Toronto Division of Urology Men's Health Summit, Toronto, Canada.
8. Cantor, J. M. (2017, November 2). *Pedophilia as a phenomenon of the brain: Update of evidence and the public response*. Invited presentation to the 7<sup>th</sup> annual SBC education event, Centre for Addiction and Mental Health, Toronto, Canada.
9. Cantor, J. M. (2017, June 9). *Pedophilia being in the brain: The evidence and the public's reaction*. Invited presentation to *SEXposium at the ROM: The science of love and sex*, Toronto, Canada.
10. Cantor, J. M., & Campea, M. (2017, April 20). *"I, Pedophile" showing and discussion*. Invited presentation to the 42<sup>nd</sup> annual meeting of the Society for Sex Therapy and Research, Montréal, Canada.
11. Cantor, J. M. (2017, March 1). *Functional and structural neuroimaging of pedophilia: Consistencies across methods and modalities*. Invited lecture to the Brain Imaging Centre, Royal Ottawa Hospital, Ottawa, Canada.
12. Cantor, J. M. (2017, January 26). *Pedophilia being in the brain: The evidence and the public reaction*. Inaugural keynote address to the University of Toronto Sexuality Interest Network, Toronto, Ontario, Canada.
13. Cantor, J. M. (2016, October 14). *Discussion of CBC's "I, Pedophile."* Office of the Children's Lawyer Educational Session, Toronto, Ontario, Canada.
14. Cantor, J. M. (2016, September 15). *Evaluating the risk to reoffend: What we know and what we don't*. Invited lecture to the Association of Ontario Judges, Ontario Court of Justice Annual Family Law Program, Blue Mountains, Ontario, Canada. [Private link only: <https://vimeo.com/239131108/3387c80652>]
15. Cantor, J. M. (2016, April 8). *Pedophilia and the brain: Conclusions from the second generation of research*. Invited lecture at the 10<sup>th</sup> annual Risk and Recovery Forensic Conference, Hamilton, Ontario.

16. Cantor, J. M. (2016, April 7). *Hypersexuality without the hyperbole*. Keynote address to the 10<sup>th</sup> annual Risk and Recovery Forensic Conference, Hamilton, Ontario.
17. Cantor, J. M. (2015, November). *No one asks to be sexually attracted to children: Living in Daniel's World*. Grand Rounds, Centre for Addiction and Mental Health. Toronto, Canada.
18. Cantor, J. M. (2015, August). *Hypersexuality: Getting past whether "it" is or "it" isn't*. Invited address at the 41<sup>st</sup> annual meeting of the International Academy of Sex Research. Toronto, Canada.
19. Cantor, J. M. (2015, July). *A unified theory of typical and atypical sexual interest in men: Paraphilia, hypersexuality, asexuality, and vanilla as outcomes of a single, dual opponent process*. Invited presentation to the 2015 Puzzles of Sexual Orientation conference, Lethbridge, AL, Canada.
20. Cantor, J. M. (2015, June). *Hypersexuality*. Keynote Address to the Ontario Problem Gambling Provincial Forum. Toronto, Canada.
21. Cantor, J. M. (2015, May). *Assessment of pedophilia: Past, present, future*. Keynote Address to the International Symposium on Neural Mechanisms Underlying Pedophilia and Child Sexual Abuse (NeMUP). Berlin, Germany.
22. Cantor, J. M. (2015, March). *Prevention of sexual abuse by tackling the biggest stigma of them all: Making sex therapy available to pedophiles*. Keynote address to the 40<sup>th</sup> annual meeting of the Society for Sex Therapy and Research, Boston, MA.
23. Cantor, J. M. (2015, March). *Pedophilia: Predisposition or perversion?* Panel discussion at Columbia University School of Journalism. New York, NY.
24. Cantor, J. M. (2015, February). *Hypersexuality*. Research Day Grand Rounds presentation to Ontario Shores Centre for Mental Health Sciences, Whitby, Ontario, Canada.
25. Cantor, J. M. (2015, January). *Brain research and pedophilia: What it means for assessment, research, and policy*. Keynote address to the inaugural meeting of the Netherlands Association for the Treatment of Sexual Abusers, Utrecht, Netherlands.
26. Cantor, J. M. (2014, December). *Understanding pedophilia and the brain: Implications for safety and society*. Keynote address for The Jewish Community Confronts Violence and Abuse: Crisis Centre for Religious Women, Jerusalem, Israel.
27. Cantor, J. M. (2014, October). *Understanding pedophilia & the brain*. Invited full-day workshop for the Sex Offender Assessment Board of Pennsylvania, Harrisburg, PA.
28. Cantor, J. M. (2014, September). *Understanding neuroimaging of pedophilia: Current status and implications*. Invited lecture presented to the Mental Health and Addition Rounds, St. Joseph's Healthcare, Hamilton, Ontario, Canada.
29. Cantor, J. M. (2014, June). *An evening with Dr. James Cantor*. Invited lecture presented to the Ontario Medical Association, District 11 Doctors' Lounge Program, Toronto, Ontario, Canada.
30. Cantor, J. M. (2014, April). *Pedophilia and the brain*. Invited lecture presented to the University of Toronto Medical Students lunchtime lecture. Toronto, Ontario, Canada.
31. Cantor, J. M. (2014, February). *Pedophilia and the brain: Recap and update*. Workshop presented at the 2014 annual meeting of the Washington State Association for the Treatment of Sexual Abusers, Cle Elum, WA.
32. Cantor, J. M., Lafaille, S., Hannah, J., Kucyi, A., Soh, D., Girard, T. A., & Mikulis, D. M. (2014, February). *Functional connectivity in pedophilia*. Neuropsychiatry Rounds, Toronto Western Hospital, Toronto, Ontario, Canada.

33. Cantor, J. M. (2013, November). *Understanding pedophilia and the brain: The basics, the current status, and their implications*. Invited lecture to the Forensic Psychology Research Centre, Carleton University, Ottawa, Canada.
34. Cantor, J. M. (2013, November). *Mistaking puberty, mistaking hebephilia*. Keynote address presented to the 32<sup>nd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Chicago, IL.
35. Cantor, J. M. (2013, October). *Understanding pedophilia and the brain: A recap and update*. Invited workshop presented at the 32<sup>nd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Chicago, IL.
36. Cantor, J. M. (2013, October). *Compulsive-hyper-sex-addiction: I don't care what we all it, what can we do?* Invited address presented to the Board of Examiners of Sex Therapists and Counselors of Ontario, Toronto, Ontario, Canada.
37. Cantor, J. M. (2013, September). *Neuroimaging of pedophilia: Current status and implications*. McGill University Health Centre, Department of Psychiatry Grand Rounds presentation, Montréal, Québec, Canada.
38. Cantor, J. M. (2013, April). *Understanding pedophilia and the brain*. Invited workshop presented at the 2013 meeting of the Minnesota Association for the Treatment of Sexual Abusers, Minneapolis, MN.
39. Cantor, J. M. (2013, April). *The neurobiology of pedophilia and its implications for assessment, treatment, and public policy*. Invited lecture at the 38<sup>th</sup> annual meeting of the Society for Sex Therapy and Research, Baltimore, MD.
40. Cantor, J. M. (2013, April). *Sex offenders: Relating research to policy*. Invited roundtable presentation at the annual meeting of the Academy of Criminal Justice Sciences, Dallas, TX.
41. Cantor, J. M. (2013, March). *Pedophilia and brain research: From the basics to the state-of-the-art*. Invited workshop presented to the annual meeting of the Forensic Mental Health Association of California, Monterey, CA.
42. Cantor, J. M. (2013, January). *Pedophilia and child molestation*. Invited lecture presented to the Canadian Border Services Agency, Toronto, Ontario, Canada.
43. Cantor, J. M. (2012, November). *Understanding pedophilia and sexual offenders against children: Neuroimaging and its implications for public safety*. Invited guest lecture to University of New Mexico School of Medicine Health Sciences Center, Albuquerque, NM.
44. Cantor, J. M. (2012, November). *Pedophilia and brain research*. Invited guest lecture to the annual meeting of the Circles of Support and Accountability, Toronto, Ontario, Canada.
45. Cantor, J. M. (2012, January). *Current findings on pedophilia brain research*. Invited workshop at the San Diego International Conference on Child and Family Maltreatment, San Diego, CA.
46. Cantor, J. M. (2012, January). *Pedophilia and the risk to re-offend*. Invited lecture to the Ontario Court of Justice Judicial Development Institute, Toronto, Ontario, Canada.
47. Cantor, J. M. (2011, November). *Pedophilia and the brain: What it means for assessment, treatment, and policy*. Plenary Lecture presented at the Association for the Treatment of Sexual Abusers, Toronto, Ontario, Canada.
48. Cantor, J. M. (2011, July). *Towards understanding contradictory findings in the neuroimaging of pedophilic men*. Keynote address to 7<sup>th</sup> annual conference on Research in Forensic Psychiatry, Regensburg, Germany.

49. Cantor, J. M. (2011, March). *Understanding sexual offending and the brain: Brain basics to the state of the art*. Workshop presented at the winter conference of the Oregon Association for the Treatment of Sexual Abusers, Oregon City, OR.
50. Cantor, J. M. (2010, October). *Manuscript publishing for students*. Workshop presented at the 29th annual meeting of the Association for the Treatment of Sexual Abusers, Phoenix, AZ.
51. Cantor, J. M. (2010, August). *Is sexual orientation a paraphilia?* Invited lecture at the International Behavioral Development Symposium, Lethbridge, Alberta, Canada.
52. Cantor, J. M. (2010, March). *Understanding sexual offending and the brain: From the basics to the state of the art*. Workshop presented at the annual meeting of the Washington State Association for the Treatment of Sexual Abusers, Blaine, WA.
53. Cantor, J. M. (2009, January). *Brain structure and function of pedophilia men*. Neuropsychiatry Rounds, Toronto Western Hospital, Toronto, Ontario.
54. Cantor, J. M. (2008, April). *Is pedophilia caused by brain dysfunction?* Invited address to the University-wide Science Day Lecture Series, SUNY Oswego, Oswego, NY.
55. Cantor, J. M., Kabani, N., Christensen, B. K., Zipursky, R. B., Barbaree, H. E., Dickey, R., Klassen, P. E., Mikulis, D. J., Kuban, M. E., Blak, T., Richards, B. A., Hanratty, M. K., & Blanchard, R. (2006, September). *MRIs of pedophilic men*. Invited presentation at the 25<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Chicago.
56. Cantor, J. M., Blanchard, R., & Christensen, B. K. (2003, March). *Findings in and implications of neuropsychology and epidemiology of pedophilia*. Invited lecture at the 28<sup>th</sup> annual meeting of the Society for Sex Therapy and Research, Miami.
57. Cantor, J. M., Christensen, B. K., Klassen, P. E., Dickey, R., & Blanchard, R. (2001, July). *Neuropsychological functioning in pedophiles*. Invited lecture presented at the 27<sup>th</sup> annual meeting of the International Academy of Sex Research, Bromont, Canada.
58. Cantor, J. M., Blanchard, R., Christensen, B., Klassen, P., & Dickey, R. (2001, February). *First glance at IQ, memory functioning and handedness in sex offenders*. Lecture presented at the Forensic Lecture Series, Centre for Addiction and Mental Health, Toronto, Ontario, Canada.
59. Cantor, J. M. (1999, November). *Reversal of SSRI-induced male sexual dysfunction: Suggestions from an animal model*. Grand Rounds presentation at the Allan Memorial Institute, Royal Victoria Hospital, Montréal, Canada.

## PAPER PRESENTATIONS AND SYMPOSIA

1. Cantor, J. M. (2020, April). "I'd rather have a trans kid than a dead kid": Critical assessment of reported rates of suicidality in trans kids. *Paper presented at the annual meeting of the Society for the Sex Therapy and Research*. Online in lieu of in person meeting.
2. Stephens, S., Lalumière, M., Seto, M. C., & Cantor, J. M. (2017, October). *The relationship between sexual responsiveness and sexual exclusivity in phallometric profiles*. Paper presented at the annual meeting of the Canadian Sex Research Forum, Fredericton, New Brunswick, Canada.
3. Stephens, S., Cantor, J. M., & Seto, M. C. (2017, March). *Can the SSPI-2 detect hebephilic sexual interest?* Paper presented at the annual meeting of the American-Psychology Law Society Annual Meeting, Seattle, WA.
4. Stephens, S., Seto, M. C., Goodwill, A. M., & Cantor, J. M. (2015, October). *Victim choice polymorphism and recidivism*. Symposium Presentation. Paper presented at the 34<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Montréal, Canada.
5. McPhail, I. V., Hermann, C. A., Fernane, S. Fernandez, Y., Cantor, J. M., & Nunes, K. L. (2014, October). *Sexual deviance in sexual offenders against children: A meta-analytic review of phallometric research*. Paper presented at the 33<sup>rd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, San Diego, CA.
6. Stephens, S., Seto, M. C., Cantor, J. M., & Goodwill, A. M. (2014, October). *Is hebephilic sexual interest a criminogenic need?: A large scale recidivism study*. Paper presented at the 33<sup>rd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, San Diego, CA.
7. Stephens, S., Seto, M. C., Cantor, J. M., & Lalumière, M. (2014, October). *Development and validation of the Revised Screening Scale for Pedophilic Interests (SSPI-2)*. Paper presented at the 33<sup>rd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, San Diego, CA.
8. Cantor, J. M., Lafaille, S., Hannah, J., Kucyi, A., Soh, D., Girard, T. A., & Mikulis, D. M. (2014, September). *Pedophilia and the brain: White matter differences detected with DTI*. Paper presented at the 13<sup>th</sup> annual meeting of the International Association for the Treatment of Sexual Abusers, Porto, Portugal.
9. Stephens, S., Seto, M., Cantor, J. M., Goodwill, A. M., & Kuban, M. (2014, March). *The role of hebephilic sexual interests in sexual victim choice*. Paper presented at the annual meeting of the American Psychology and Law Society, New Orleans, LA.
10. McPhail, I. V., Fernane, S. A., Hermann, C. A., Fernandez, Y. M., Nunes, K. L., & Cantor, J. M. (2013, November). *Sexual deviance and sexual recidivism in sexual offenders against children: A meta-analysis*. Paper presented at the 32<sup>nd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Chicago, IL.
11. Cantor, J. M. (2013, September). *Pedophilia and the brain: Current MRI research and its implications*. Paper presented at the 21<sup>st</sup> annual World Congress for Sexual Health, Porto Alegre, Brazil. [Featured among Best Abstracts, top 10 of 500.]
12. Cantor, J. M. (Chair). (2012, March). *Innovations in sex research*. Symposium conducted at the 37<sup>th</sup> annual meeting of the Society for Sex Therapy and Research, Chicago.
13. Cantor, J. M., & Blanchard, R. (2011, August). fMRI versus phallometry in the diagnosis of pedophilia and hebephilia. In J. M. Cantor (Chair), *Neuroimaging of men's object*

- preferences*. Symposium presented at the 37th annual meeting of the International Academy of Sex Research, Los Angeles, USA.
14. Cantor, J. M. (Chair). (2011, August). *Neuroimaging of men's object preferences*. Symposium conducted at the 37th annual meeting of the International Academy of Sex Research, Los Angeles.
15. Cantor, J. M. (2010, October). A meta-analysis of neuroimaging studies of male sexual arousal. In S. Stolerú (Chair), *Brain processing of sexual stimuli in pedophilia: An application of functional neuroimaging*. Symposium presented at the 29<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Phoenix, AZ.
16. Chivers, M. L., Seto, M. C., Cantor, J. C., Grimbos, T., & Roy, C. (April, 2010). *Psychophysiological assessment of sexual activity preferences in women*. Paper presented at the 35<sup>th</sup> annual meeting of the Society for Sex Therapy and Research, Boston, USA.
17. Cantor, J. M., Girard, T. A., & Lovett-Barron, M. (2008, November). *The brain regions that respond to erotica: Sexual neuroscience for dummies*. Paper presented at the 51st annual meeting of the Society for the Scientific Study of Sexuality, San Juan, Puerto Rico.
18. Barbaree, H., Langton, C., Blanchard, R., & Cantor, J. M. (2007, October). *The role of age-at-release in the evaluation of recidivism risk of sexual offenders*. Paper presented at the 26<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, San Diego.
19. Cantor, J. M., Kabani, N., Christensen, B. K., Zipursky, R. B., Barbaree, H. E., Dickey, R., Klassen, P. E., Mikulis, D. J., Kuban, M. E., Blak, T., Richards, B. A., Hanratty, M. K., & Blanchard, R. (2006, July). *Pedophilia and brain morphology*. Abstract and paper presented at the 32<sup>nd</sup> annual meeting of the International Academy of Sex Research, Amsterdam, Netherlands.
20. Seto, M. C., Cantor, J. M., & Blanchard, R. (2006, March). *Child pornography offending is a diagnostic indicator of pedophilia*. Paper presented at the 2006 annual meeting of the American Psychology-Law Society Conference, St. Petersburg, Florida.
21. Blanchard, R., Cantor, J. M., Bogaert, A. F., Breedlove, S. M., & Ellis, L. (2005, August). *Interaction of fraternal birth order and handedness in the development of male homosexuality*. Abstract and paper presented at the International Behavioral Development Symposium, Minot, North Dakota.
22. Cantor, J. M., & Blanchard, R. (2005, July). *Quantitative reanalysis of aggregate data on IQ in sexual offenders*. Abstract and poster presented at the 31<sup>st</sup> annual meeting of the International Academy of Sex Research, Ottawa, Canada.
23. Cantor, J. M. (2003, August). *Sex reassignment on demand: The clinician's dilemma*. Paper presented at the 111<sup>th</sup> annual meeting of the American Psychological Association, Toronto, Canada.
24. Cantor, J. M. (2003, June). *Meta-analysis of VIQ-PIQ differences in male sex offenders*. Paper presented at the Harvey Stancer Research Day, Toronto, Ontario, Canada.
25. Cantor, J. M. (2002, August). *Gender role in autogynephilic transsexuals: The more things change...* Paper presented at the 110<sup>th</sup> annual meeting of the American Psychological Association, Chicago.

26. Cantor, J. M., Christensen, B. K., Klassen, P. E., Dickey, R., & Blanchard, R. (2001, June). *IQ, memory functioning, and handedness in male sex offenders*. Paper presented at the Harvey Stancer Research Day, Toronto, Ontario, Canada.
27. Cantor, J. M. (1998, August). *Convention orientation for lesbian, gay, and bisexual students*. Papers presented at the 106<sup>th</sup> annual meeting of the American Psychological Association.
28. Cantor, J. M. (1997, August). *Discussion hour for lesbian, gay, and bisexual students*. Presented at the 105<sup>th</sup> annual meeting of the American Psychological Association.
29. Cantor, J. M. (1997, August). *Convention orientation for lesbian, gay, and bisexual students*. Paper presented at the 105<sup>th</sup> annual meeting of the American Psychological Association.
30. Cantor, J. M. (1996, August). *Discussion hour for lesbian, gay, and bisexual students*. Presented at the 104<sup>th</sup> annual meeting of the American Psychological Association.
31. Cantor, J. M. (1996, August). *Symposium: Question of inclusion: Lesbian and gay psychologists and accreditation*. Paper presented at the 104<sup>th</sup> annual meeting of the American Psychological Association, Toronto.
32. Cantor, J. M. (1996, August). *Convention orientation for lesbian, gay, and bisexual students*. Papers presented at the 104<sup>th</sup> annual meeting of the American Psychological Association.
33. Cantor, J. M. (1995, August). *Discussion hour for lesbian, gay, and bisexual students*. Presented at the 103<sup>rd</sup> annual meeting of the American Psychological Association.
34. Cantor, J. M. (1995, August). *Convention orientation for lesbian, gay, and bisexual students*. Papers presented at the 103<sup>rd</sup> annual meeting of the American Psychological Association.
35. Cantor, J. M. (1994, August). *Discussion hour for lesbian, gay, and bisexual students*. Presented at the 102<sup>nd</sup> annual meeting of the American Psychological Association.
36. Cantor, J. M. (1994, August). *Convention orientation for lesbian, gay, and bisexual students*. Papers presented at the 102<sup>nd</sup> annual meeting of the American Psychological Association.
37. Cantor, J. M., & Pilkington, N. W. (1992, August). *Homophobia in psychology programs: A survey of graduate students*. Paper presented at the Centennial Convention of the American Psychological Association, Washington, DC. (ERIC Document Reproduction Service No. ED 351 618)
38. Cantor, J. M. (1991, August). *Being gay and being a graduate student: Double the memberships, four times the problems*. Paper presented at the 99<sup>th</sup> annual meeting of the American Psychological Association, San Francisco.

## POSTER PRESENTATIONS

1. Klein, L., Stephens, S., Goodwill, A. M., Cantor, J. M., & Seto, M. C. (2015, October). *The psychological propensities of risk in undetected sexual offenders*. Poster presented at the 34<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Montréal, Canada.
2. Pullman, L. E., Stephens, S., Seto, M. C., Goodwill, A. M., & Cantor, J. M. (2015, October). *Why are incest offenders less likely to recidivate?* Poster presented at the 34<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Montréal, Canada.
3. Seto, M. C., Stephens, S. M., Cantor, J. M., Lalumiere, M. L., Sandler, J. C., & Freeman, N. A. (2015, August). *The development and validation of the Revised Screening Scale for Pedophilic Interests (SSPI-2)*. Poster presentation at the 41<sup>st</sup> annual meeting of the International Academy of Sex Research. Toronto, Canada.
4. Soh, D. W., & Cantor, J. M. (2015, August). *A peek inside a furry convention*. Poster presentation at the 41<sup>st</sup> annual meeting of the International Academy of Sex Research. Toronto, Canada.
5. VanderLaan, D. P., Lobaugh, N. J., Chakravarty, M. M., Patel, R., Chavez, S. Stojanovski, S. O., Takagi, A., Hughes, S. K., Wasserman, L., Bain, J., Cantor, J. M., & Zucker, K. J. (2015, August). *The neurohormonal hypothesis of gender dysphoria: Preliminary evidence of cortical surface area differences in adolescent natal females*. Poster presentation at the 31<sup>st</sup> annual meeting of the International Academy of Sex Research. Toronto, Canada.
6. Cantor, J. M., Lafaille, S. J., Moayedi, M., Mikulis, D. M., & Girard, T. A. (2015, June). *Diffusion tensor imaging (DTI) of the brain in pedohebephilic men: Preliminary analyses*. Harvey Stancer Research Day, Toronto, Ontario Canada.
7. Newman, J. E., Stephens, S., Seto, M. C., & Cantor, J. M. (2014, October). *The validity of the Static-99 in sexual offenders with low intellectual abilities*. Poster presentation at the 33<sup>rd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, San Diego, CA.
8. Lykins, A. D., Walton, M. T., & Cantor, J. M. (2014, June). *An online assessment of personality, psychological, and sexuality trait variables associated with self-reported hypersexual behavior*. Poster presentation at the 30<sup>th</sup> annual meeting of the International Academy of Sex Research, Dubrovnik, Croatia.
9. Stephens, S., Seto, M. C., Cantor, J. M., Goodwill, A. M., & Kuban, M. (2013, November). *The utility of phallometry in the assessment of hebephilia*. Poster presented at the 32<sup>nd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Chicago.
10. Stephens, S., Seto, M. C., Cantor, J. M., Goodwill, A. M., & Kuban, M. (2013, October). *The role of hebephilic sexual interests in sexual victim choice*. Poster presented at the 32<sup>nd</sup> annual meeting of the Association for the Treatment of Sexual Abusers, Chicago.
11. Fazio, R. L., & Cantor, J. M. (2013, October). *Analysis of the Fazio Laterality Inventory (FLI) in a population with established atypical handedness*. Poster presented at the 33<sup>rd</sup> annual meeting of the National Academy of Neuropsychology, San Diego.
12. Lafaille, S., Hannah, J., Soh, D., Kucyi, A., Girard, T. A., Mikulis, D. M., & Cantor, J. M. (2013, August). *Investigating resting state networks in pedohebephiles*. Poster presented at the 29<sup>th</sup> annual meeting of the International Academy of Sex Research, Chicago.

13. McPhail, I. V., Lykins, A. D., Robinson, J. J., LeBlanc, S., & Cantor, J. M. (2013, August). *Effects of prescription medication on volumetric phallometry output*. Poster presented at the 29<sup>th</sup> annual meeting of the International Academy of Sex Research, Chicago.
14. Murray, M. E., Dyshniku, F., Fazio, R. L., & Cantor, J. M. (2013, August). *Minor physical anomalies as a window into the prenatal origins of pedophilia*. Poster presented at the 29<sup>th</sup> annual meeting of the International Academy of Sex Research, Chicago.
15. Sutton, K. S., Stephens, S., Dyshniku, F., Tulloch, T., & Cantor, J. M. (2013, August). *Pilot group treatment for "procrasturbation."* Poster presented at 39<sup>th</sup> annual meeting of the International Academy of Sex Research, Chicago.
16. Sutton, K. S., Pytyck, J., Stratton, N., Sylva, D., Kolla, N., & Cantor, J. M. (2013, August). *Client characteristics by type of hypersexuality referral: A quantitative chart review*. Poster presented at the 39<sup>th</sup> annual meeting of the International Academy of Sex Research, Chicago.
17. Fazio, R. L., & Cantor, J. M. (2013, June). *A replication and extension of the psychometric properties of the Digit Vigilance Test*. Poster presented at the 11<sup>th</sup> annual meeting of the American Academy of Clinical Neuropsychology, Chicago.
18. Lafaille, S., Moayed, M., Mikulis, D. M., Girard, T. A., Kuban, M., Blak, T., & Cantor, J. M. (2012, July). *Diffusion Tensor Imaging (DTI) of the brain in pedohebephilic men: Preliminary analyses*. Poster presented at the 38<sup>th</sup> annual meeting of the International Academy of Sex Research, Lisbon, Portugal.
19. Lykins, A. D., Cantor, J. M., Kuban, M. E., Blak, T., Dickey, R., Klassen, P. E., & Blanchard, R. (2010, July). *Sexual arousal to female children in gynephilic men*. Poster presented at the 38<sup>th</sup> annual meeting of the International Academy of Sex Research, Prague, Czech Republic.
20. Cantor, J. M., Girard, T. A., Lovett-Barron, M., & Blak, T. (2008, July). *Brain regions responding to visual sexual stimuli: Meta-analysis of PET and fMRI studies*. Abstract and poster presented at the 34<sup>th</sup> annual meeting of the International Academy of Sex Research, Leuven, Belgium.
21. Lykins, A. D., Blanchard, R., Cantor, J. M., Blak, T., & Kuban, M. E. (2008, July). *Diagnosing sexual attraction to children: Considerations for DSM-V*. Poster presented at the 34<sup>th</sup> annual meeting of the International Academy of Sex Research, Leuven, Belgium.
22. Cantor, J. M., Blak, T., Kuban, M. E., Klassen, P. E., Dickey, R. and Blanchard, R. (2007, October). *Physical height in pedophilia and hebephilia*. Poster presented at the 26<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, San Diego.
23. Cantor, J. M., Blak, T., Kuban, M. E., Klassen, P. E., Dickey, R. and Blanchard, R. (2007, August). *Physical height in pedophilia and hebephilia*. Abstract and poster presented at the 33<sup>rd</sup> annual meeting of the International Academy of Sex Research, Vancouver, Canada.
24. Puts, D. A., Blanchard, R., Cardenas, R., Cantor, J., Jordan, C. L., & Breedlove, S. M. (2007, August). *Earlier puberty predicts superior performance on male-biased visuospatial tasks in men but not women*. Abstract and poster presented at the 33<sup>rd</sup> annual meeting of the International Academy of Sex Research, Vancouver, Canada.
25. Seto, M. C., Cantor, J. M., & Blanchard, R. (2005, November). *Possession of child pornography is a diagnostic indicator of pedophilia*. Poster presented at the 24<sup>th</sup> annual meeting of the Association for the Treatment of Sexual Abusers, New Orleans.

26. Blanchard, R., Cantor, J. M., Bogaert, A. F., Breedlove, S. M., & Ellis, L. (2005, July). *Interaction of fraternal birth order and handedness in the development of male homosexuality*. Abstract and poster presented at the 31<sup>st</sup> annual meeting of the International Academy of Sex Research, Ottawa, Canada.
27. Cantor, J. M., & Blanchard, R. (2003, July). *The reported VIQ–PIQ differences in male sex offenders are artifactual?* Abstract and poster presented at the 29<sup>th</sup> annual meeting of the International Academy of Sex Research, Bloomington, Indiana.
28. Christensen, B. K., Cantor, J. M., Millikin, C., & Blanchard, R. (2002, February). *Factor analysis of two brief memory tests: Preliminary evidence for modality-specific measurement*. Poster presented at the 30th annual meeting of the International Neuropsychological Society, Toronto, Ontario, Canada.
29. Cantor, J. M., Blanchard, R., Paterson, A., Bogaert, A. (2000, June). *How many gay men owe their sexual orientation to fraternal birth order?* Abstract and poster presented at the International Behavioral Development Symposium, Minot, North Dakota.
30. Cantor, J. M., Binik, Y., & Pfaus, J. G. (1996, November). *Fluoxetine inhibition of male rat sexual behavior: Reversal by oxytocin*. Poster presented at the 26<sup>th</sup> annual meeting of the Society for Neurosciences, Washington, DC.
31. Cantor, J. M., Binik, Y., & Pfaus, J. G. (1996, June). *An animal model of fluoxetine-induced sexual dysfunction: Dose dependence and time course*. Poster presented at the 28<sup>th</sup> annual Conference on Reproductive Behavior, Montréal, Canada.
32. Cantor, J. M., O'Connor, M. G., Kaplan, B., & Cermak, L. S. (1993, June). *Transient events test of retrograde memory: Performance of amnesic and unimpaired populations*. Poster presented at the 2nd annual science symposium of the Massachusetts Neuropsychological Society, Cambridge, MA.

## EDITORIAL AND PEER-REVIEWING ACTIVITIES

### **Editor-in-Chief**

*Sexual Abuse: A Journal of Research and Treatment*

Jan., 2010–Dec., 2014

### **Editorial Board Memberships**

*Journal of Sexual Aggression*

Jan., 2010–Dec., 2021

*Journal of Sex Research, The*

Jan., 2008–Aug., 2020

*Sexual Abuse: A Journal of Research and Treatment*

Jan., 2006–Dec., 2019

*Archives of Sexual Behavior*

Jan., 2004–Present

*The Clinical Psychologist*

Jan., 2004–Dec., 2005

### **Ad hoc Journal Reviewer Activity**

*American Journal of Psychiatry*

*Journal of Consulting and Clinical Psychology*

*Annual Review of Sex Research*

*Journal of Forensic Psychology Practice*

*Archives of General Psychiatry*

*Journal for the Scientific Study of Religion*

*Assessment*

*Journal of Sexual Aggression*

*Biological Psychiatry*

*Journal of Sexual Medicine*

*BMC Psychiatry*

*Journal of Psychiatric Research*

*Brain Structure and Function*

*Nature Neuroscience*

*British Journal of Psychiatry*

*Neurobiology Reviews*

*British Medical Journal*

*Neuroscience & Biobehavioral Reviews*

## GRANT REVIEW PANELS

- 2017–2021 Member, College of Reviewers, *Canadian Institutes of Health Research*, Canada.
- 2017 Committee Member, Peer Review Committee—Doctoral Research Awards A. *Canadian Institutes of Health Research*, Canada.
- 2017 Member, International Review Board, Research collaborations on behavioural disorders related to violence, neglect, maltreatment and abuse in childhood and adolescence. *Bundesministerium für Bildung und Forschung [Ministry of Education and Research]*, Germany.
- 2016 Reviewer. National Science Center [*Narodowe Centrum Nauki*], Poland.
- 2016 Committee Member, Peer Review Committee—Doctoral Research Awards A. *Canadian Institutes of Health Research*, Canada.
- 2015 Assessor (Peer Reviewer). Discovery Grants Program. *Australian Research Council*, Australia.
- 2015 Reviewer. *Czech Science Foundation*, Czech Republic.
- 2015 Reviewer, “Off the beaten track” grant scheme. *Volkswagen Foundation*, Germany.
- 2015 External Reviewer, Discovery Grants program—Biological Systems and Functions. *National Sciences and Engineering Research Council of Canada*, Canada
- 2015 Committee Member, Peer Review Committee—Doctoral Research Awards A. *Canadian Institutes of Health Research*, Canada.
- 2014 Assessor (Peer Reviewer). Discovery Grants Program. *Australian Research Council*, Australia.
- 2014 External Reviewer, Discovery Grants program—Biological Systems and Functions. *National Sciences and Engineering Research Council of Canada*, Canada.
- 2014 Panel Member, Dean’s Fund—Clinical Science Panel. *University of Toronto Faculty of Medicine*, Canada.
- 2014 Committee Member, Peer Review Committee—Doctoral Research Awards A. *Canadian Institutes of Health Research*, Canada.
- 2013 Panel Member, Grant Miller Cancer Research Grant Panel. *University of Toronto Faculty of Medicine*, Canada.

- 2013      Panel Member, Dean of Medicine Fund New Faculty Grant Clinical Science Panel. *University of Toronto Faculty of Medicine*, Canada.
  
- 2012      Board Member, International Review Board, Research collaborations on behavioural disorders related to violence, neglect, maltreatment and abuse in childhood and adolescence (2<sup>nd</sup> round). *Bundesministerium für Bildung und Forschung [Ministry of Education and Research]*, Germany.
  
- 2012      External Reviewer, University of Ottawa Medical Research Fund. *University of Ottawa Department of Psychiatry*, Canada.
  
- 2012      External Reviewer, Behavioural Sciences—B. *Canadian Institutes of Health Research*, Canada.
  
- 2011      Board Member, International Review Board, Research collaborations on behavioural disorders related to violence, neglect, maltreatment and abuse in childhood and adolescence. *Bundesministerium für Bildung und Forschung [Ministry of Education and Research]*, Germany.

## TEACHING AND TRAINING

### PostDoctoral Research Supervision

#### **Law & Mental Health Program, Centre for Addiction and Mental Health, Toronto, Canada**

|                         |                        |
|-------------------------|------------------------|
| Dr. Katherine S. Sutton | Sept., 2012–Dec., 2013 |
| Dr. Rachel Fazio        | Sept., 2012–Aug., 2013 |
| Dr. Amy Lykins          | Sept., 2008–Nov., 2009 |

### Doctoral Research Supervision

#### **Centre for Addiction and Mental Health, Toronto, Canada**

|                                                       |                        |
|-------------------------------------------------------|------------------------|
| Michael Walton • University of New England, Australia | Sept., 2017–Aug., 2018 |
| Debra Soh • York University                           | May, 2013–Aug., 2017   |
| Skye Stephens • Ryerson University                    | April, 2012–June, 2016 |

### Masters Research Supervision

#### **Centre for Addiction and Mental Health, Toronto, Canada**

|                                     |                       |
|-------------------------------------|-----------------------|
| Nicole Cormier • Ryerson University | June, 2012–present    |
| Debra Soh • Ryerson University      | May, 2009–April, 2010 |

### Undergraduate Research Supervision

#### **Centre for Addiction and Mental Health, Toronto, Canada**

|                                          |              |
|------------------------------------------|--------------|
| Kylie Reale • Ryerson University         | Spring, 2014 |
| Jarrett Hannah • University of Rochester | Summer, 2013 |
| Michael Humeniuk • University of Toronto | Summer, 2012 |

### Clinical Supervision (Doctoral Internship)

#### **Clinical Internship Program, Centre for Addiction and Mental Health, Toronto, Canada**

|                                                |           |
|------------------------------------------------|-----------|
| Katherine S. Sutton • Queen's University       | 2011–2012 |
| David Sylva • Northwestern University          | 2011–2012 |
| Jordan Rullo • University of Utah              | 2010–2011 |
| Lea Thaler • University of Nevada, Las Vegas   | 2010–2011 |
| Carolyn Klein • University of British Columbia | 2009–2010 |
| Bobby R. Walling • University of Manitoba      | 2009–2010 |

## TEACHING AND TRAINING

**EXPERT REPORT OF JAMES M. CANTOR, PHD**

**APPENDIX 2**

## Transgender and Gender Diverse Children and Adolescents: Fact-Checking of AAP Policy

James M. Cantor

Toronto Sexuality Centre, Toronto, Canada

### ABSTRACT

The American Academy of Pediatrics (AAP) recently published a policy statement: *Ensuring comprehensive care and support for transgender and gender-diverse children and adolescents*. Although almost all clinics and professional associations in the world use what's called the *watchful waiting* approach to helping gender diverse (GD) children, the AAP statement instead rejected that consensus, endorsing *gender affirmation* as the only acceptable approach. Remarkably, not only did the AAP statement fail to include any of the actual outcomes literature on such cases, but it also misrepresented the contents of its citations, which repeatedly said the very opposite of what AAP attributed to them.

The American Academy of Pediatrics (AAP) recently published a policy statement entitled, *Ensuring comprehensive care and support for transgender and gender-diverse children and adolescents* (Rafferty, AAP Committee on Psychosocial Aspects of Child and Family Health, AAP Committee on Adolescence, AAP Section on Lesbian, Gay, Bisexual, and Transgender Health and Wellness, 2018). These are children who manifest discontent with the sex they were born as and desire to live as the other sex (or as some alternative gender role). The policy was quite a remarkable document: Although almost all clinics and professional associations in the world use what's called the *watchful waiting* approach to helping transgender and gender diverse (GD) children, the AAP statement rejected that consensus, endorsing only *gender affirmation*. That is, where the consensus is to delay any transitions after the onset of puberty, AAP instead rejected waiting before transition. With AAP taking such a dramatic departure from other professional associations, I was immediately curious about what evidence led them to that conclusion. As I read the works on which they based their policy, however, I was pretty surprised—rather alarmed, actually: These documents simply did not say what AAP claimed they did. In fact, the references that AAP cited as the basis of their policy instead outright contradicted that policy, repeatedly endorsing *watchful waiting*.

The AAP statement was also remarkable in what it left out—namely, the actual outcomes research on GD children. In total, there have been 11 follow-up studies of GD children, of which AAP cited one (Wallien & Cohen-Kettenis, 2008), doing so without actually mentioning the outcome data it contained. The literature on outcomes was neither reviewed, summarized, nor subjected to meta-analysis to be considered in the aggregate—It was merely disappeared. (The list of all existing studies appears in the appendix.) As they make clear, *every* follow-up study of GD children, without exception, found the same thing: Over puberty, the majority of GD children cease to want to transition. AAP is, of course, free to establish whatever policy it likes on

whatever basis it likes. But any assertion that their policy is based on evidence is demonstrably false, as detailed below.

AAP divided clinical approaches into three types—conversion therapy, watchful waiting, and gender affirmation. It rejected the first two and endorsed *gender affirmation* as the only acceptable alternative. Most readers will likely be familiar already with attempts to use conversion therapy to change sexual orientation. With regard to gender identity, AAP wrote:

“[C]onversion” or “reparative” treatment models are used to prevent children and adolescents from identifying as transgender or to dissuade them from exhibiting gender-diverse expressions. . . . Reparative approaches have been proven to be not only unsuccessful<sup>38</sup> but also deleterious and are considered outside the mainstream of traditional medical practice.<sup>29,39–42</sup>

The citations were:

38. Haldeman DC. The practice and ethics of sexual orientation conversion therapy. *J Consult Clin Psychol*. 1994;62(2):221–227.
29. Adelson SL; American Academy of Child and Adolescent Psychiatry (AACAP) Committee on Quality Issues (CQI). Practice parameter on gay, lesbian, or bisexual sexual orientation, gender nonconformity, and gender discordance in children and adolescents. *J Am Acad Child Adolesc Psychiatry*. 2012;51(9):957–974.
39. Byne W. Regulations restrict practice of conversion therapy. *LGBT Health*. 2016;3(2):97–99.
40. Cohen-Kettenis PT, Delemarre van de Waal HA, Gooren LJ. The treatment of adolescent transsexuals: changing insights. *J Sex Med*. 2008;5(8):1892–1897.
41. Bryant K. Making gender identity disorder of childhood: historical lessons for contemporary debates. *Sex Res Soc Policy*. 2006;3(3):23–39.
42. World Professional Association for Transgender Health. *WPATH De-Psychopathologisation Statement*. Minneapolis, MN: World Professional Association for Transgender Health; 2010.

AAP’s claims struck me as odd because *there are no studies of conversion therapy for gender identity*. Studies of conversion therapy have been limited to *sexual orientation*, and, moreover, to the sexual orientation of *adults*, not to gender identity and not of children in any case. The article AAP cited to support their claim (reference number 38) is indeed a classic and well-known review, but it is a review of sexual orientation research *only*. Neither gender identity, nor even children, received a single mention in it. Indeed, the narrower scope of that article should be clear to anyone reading even just its title: “The practice and ethics of *sexual orientation* conversion therapy” [italics added].

AAP continued, saying that conversion approaches for GD children have already been rejected by medical consensus, citing five sources. This claim struck me as just as odd, however—I recalled associations banning conversion therapy for sexual orientation, but not for gender identity, exactly because there is no evidence for generalizing from adult sexual orientation to childhood gender identity. So, I started checking AAP’s citations for that, and these sources too pertained only to sexual orientation, not gender identity (specifics below). What AAP’s sources *did* repeatedly emphasize was that:

- A. Sexual orientation of adults is unaffected by conversion therapy and any other [known] intervention;
- B. Gender dysphoria in childhood before puberty desists in the majority of cases, becoming (cis-gendered) homosexuality in adulthood, again regardless of any [known] intervention; and
- C. Gender dysphoria in childhood persisting after puberty tends to persist entirely.

That is, in the context of GD children, it simply makes no sense to refer to externally induced “conversion”: The majority of children “convert” to cisgender or “desist” from transgender

regardless of any attempt to change them. “Conversion” only makes sense with regard to adult sexual orientation because (unlike childhood gender identity), adult homosexuality never or nearly never spontaneously changes to heterosexuality. Although gender identity and sexual orientation may often be analogous and discussed together with regard to social or political values and to civil rights, they are nonetheless distinct—with distinct origins, needs, and responses to medical and mental health care choices. Although AAP emphasized to the reader that “gender identity is not synonymous with ‘sexual orientation’” (Rafferty et al., 2018, p. 3), they went ahead to treat them as such nonetheless.

To return to checking AAP’s fidelity to its sources: Reference 29 was a practice guideline from the Committee on Quality Issues of the American Academy of Child and Adolescent Psychiatry (AACAP). Despite AAP applying this source to *gender identity*, AACAP was quite unambiguous regarding their intent to speak to sexual orientation and *only* to sexual orientation: “Principle 6. Clinicians should be aware that there is no evidence that *sexual orientation* can be altered through therapy, and that attempts to do so may be harmful. There is no established evidence that change in a predominant, enduring *homosexual* pattern of development is possible. Although sexual fantasies can, to some degree, be suppressed or repressed by those who are ashamed of or in conflict about them, sexual desire is not a choice. However, behavior, social role, and—to a degree—identity and self-acceptance are. Although operant conditioning modifies sexual fetishes, it does not alter *homosexuality*. Psychiatric efforts to alter *sexual orientation* through ‘reparative therapy’ in adults have found little or no change in *sexual orientation*, while causing significant risk of harm to self-esteem” (AACAP, 2012, p. 967, italics added).

Whereas AAP cites AACAP to support gender affirmation as the only alternative for treating GD children, AACAP’s actual view was decidedly neutral, noting the lack of evidence: “Given the lack of empirical evidence from randomized, controlled trials of the efficacy of treatment aimed at eliminating gender discordance, the potential risks of treatment, and longitudinal evidence that gender discordance persists in only a small minority of untreated cases arising in childhood, further research is needed on predictors of persistence and desistence of childhood gender discordance as well as the long-term risks and benefits of intervention before any treatment to eliminate gender discordance can be endorsed” (AACAP, 2012, p. 969). Moreover, whereas AAP rejected watchful waiting, what AACAP recommended was: “In general, it is desirable to help adolescents who may be experiencing gender distress and dysphoria to defer sex reassignment until adulthood” (AACAP, 2012, p. 969). So, not only did AAP attribute to AACAP something AACAP never said, but also AAP withheld from readers AACAP’s actual view.

Next, in reference 39, Byne (2016) also addressed only sexual orientation, doing so very clearly: “Reparative therapy is a subset of conversion therapies based on the premise that *same-sex attraction* are reparations for childhood trauma. Thus, practitioners of reparative therapy believe that exploring, isolating, and repairing these childhood emotional wounds will often result in reducing *same-sex attractions*” (Byne, 2016, p. 97). Byne does not say this of gender identity, as the AAP statement misrepresents.

In AAP reference 40, Cohen-Kettenis et al. (2008) did finally pertain to gender identity; however, this article never mentions conversion therapy. (!) Rather, in this study, the authors presented that clinic’s lowering of their minimum age for cross-sex hormone treatment from age 18 to 16, which they did on the basis of a series of studies showing the high rates of success with this age group. Although it did strike me as odd that AAP picked as support against conversion therapy an article that did not mention conversion therapy, I could imagine AAP cited the article as an example of what the “mainstream of traditional medical practice” consists of (the logic being that conversion therapy falls outside what an ‘ideal’ clinic like this one provides). However, what this clinic provides is the very *watchful waiting* approach that AAP rejected. The approach

espoused by Cohen-Kettenis (and the other clinics mentioned in the source—Gent, Boston, Oslo, and now formerly, Toronto) is to make puberty-halting interventions available at age 12 because: “[P]ubertal suppression may give adolescents, together with the attending health professional, more time to explore their gender identity, without the distress of the developing secondary sex characteristics. The precision of the diagnosis may thus be improved” (Cohen-Kettenis et al., 2008, p. 1894).

Reference 41 presented a very interesting history spanning the 1960s–1990s about how feminine boys and tomboyish girls came to be recognized as mostly pre-homosexual, and how that status came to be entered into the DSM at the same time as homosexuality was being *removed* from the DSM. Conversion therapy is never mentioned. Indeed, to the extent that Bryant mentions treatment at all, it is to say that treatment is entirely irrelevant to his analysis: “An important omission from the *DSM* is a discussion of the kinds of treatment that GIDC children should receive. (This omission is a general orientation of the *DSM* and not unique to GIDC)” (Bryant, 2006, p. 35). How this article supports AAP’s claim is a mystery. Moreover, how AAP could cite a 2006 history discussing events of the 1990s and earlier to support a claim about the *current* consensus in this quickly evolving discussion remains all the more unfathomable.

Cited last in this section was a one-paragraph press release from the World Professional Association for Transgender Health. Written during the early stages of the American Psychiatric Association’s (APA’s) update of the *DSM*, the statement asserted simply that “The WPATH Board of Directors strongly urges the de-psychopathologisation of gender variance worldwide.” Very reasonable debate can (and should) be had regarding whether gender dysphoria should be removed from the *DSM* as homosexuality was, and WPATH was well within its purview to assert that it should. Now that the *DSM* revision process is years completed however, history has seen that APA ultimately retained the diagnostic categories, rejecting WPATH’s urging. This makes AAP’s logic entirely backwards: That WPATH’s request to depathologize gender dysphoria was *rejected* suggests that it is WPATH’s view—and therefore the AAP policy—which fall “outside the mainstream of traditional medical practice.” (!)

AAP based this entire line of reasoning on their belief that conversion therapy is being used “to prevent children and adolescents from identifying as transgender” (Rafferty et al., 2018, p. 4). That claim is left without citation or support. In contrast, what is said by AAP’s sources is “delaying affirmation should *not* be construed as conversion therapy or an attempt to change gender identity” in the first place (Byne, 2016, p. 2). Nonetheless, AAP seems to be doing exactly that: simply relabeling any alternative approach as equivalent to conversion therapy.

Although AAP (and anyone else) may reject (what they label to be) conversion therapy purely on the basis of political or personal values, there is no evidence to back the AAP’s stated claim about the existing science on gender identity at all, never mind gender identity of children.

AAP also dismissed the watchful waiting approach out of hand, not citing any evidence, but repeatedly calling it “outdated.” The criticisms AAP provided, however, again defied the existing evidence, with even its own sources repeatedly calling watchful waiting the current standard. According to AAP:

[G]ender affirmation is in contrast to the outdated approach in which a child’s gender-diverse assertions are held as “possibly true” until an arbitrary age (often after pubertal onset) when they can be considered valid, an approach that authors of the literature have termed “watchful waiting.” This outdated approach does not serve the child because critical support is withheld. Watchful waiting is based on binary notions of gender in which gender diversity and fluidity is pathologized; in watchful waiting, it is also assumed that notions of gender identity become fixed at a certain age. The approach is also influenced by a group of early studies with validity concerns, methodologic flaws, and limited follow-up on children who identified as TGD and, by adolescence, did not seek further treatment (“desisters”).<sup>45,47</sup>

The citations from AAP’s reference list are:

45. Ehrensaft D, Giammattei SV, Storck K, Tishelman AC, Keo-Meier C. Prepubertal social gender transitions: what we know; what we can learn—a view from a gender affirmative lens. *Int J Transgend.* 2018;19(2):251–268
47. Olson KR. Prepubescent transgender children: what we do and do not know. *J Am Acad Child Adolesc Psychiatry.* 2016;55(3):155–156.e3

I was surprised first by the AAP's claim that watchful waiting's delay to puberty was somehow "arbitrary." The literature, including AAP's sources, repeatedly indicated the pivotal importance of puberty, noting that outcomes strongly diverge at that point. According to AAP reference 29, in "*prepubertal* boys with gender discordance—including many without any mental health treatment—the cross gender wishes usually fade over time and do not persist into adulthood, with only 2.2% to 11.9% continuing to experience gender discordance" (Adelson & AACAP, 2012, p. 963, italics added), whereas "when gender variance with the desire to be the other sex is present *in adolescence*, this desire usually does persist through adulthood" (Adelson & AACAP, 2012, p. 964, italics added). Similarly, according to AAP reference 40, "Symptoms of GID *at prepubertal ages* decrease or even disappear in a considerable percentage of children (estimates range from 80–95%). Therefore, any intervention in childhood would seem premature and inappropriate. However, GID persisting *into early puberty* appears to be highly persistent" (Cohen-Kettenis et al., 2008, p. 1895, italics added). That follow-up studies of prepubertal transition differ from postpubertal transition is the very meaning of non-arbitrary. AAP gave readers exactly the reverse of what was contained in its own sources. If AAP were correct in saying that puberty is an arbitrarily selected age, then AAP will be able to offer another point to wait for with as much empirical backing as puberty has.

Next, it was not clear on what basis AAP could say that watchful waiting withholds support—AAP cited no support for its claim. The people in such programs often receive substantial support during this period. Also unclear is on what basis AAP could already know exactly which treatments are "critical" and which are not—Answering that question is the very purpose of this entire endeavor. Indeed, the logic of AAP's claim appears entirely circular: It is only if one were already pre-convinced that gender affirmation is the only acceptable alternative that would make watchful waiting seem to withhold critical support—What it delays is gender affirmation, the method one has already decided to be critical.

Although AAP's next claim did not have a citation appearing at the end of its sentence, binary notions of gender were mentioned both in references 45 and 47. Specifically, both pointed out that existing outcome studies have been about people transitioning from one sex to the other, rather than from one sex to an in-between status or a combination of masculine/feminine features. Neither reference presented this as a reason to reject the results from the existing studies of complete transition however (which is how AAP cast it). Although it is indeed true that the outcome data have been about complete transition, some future study showing that partial transition shows a different outcome would not invalidate what is known about complete transition. Indeed, data showing that partial transition gives better outcomes than complete transition would, once again, support the watchful waiting approach which AAP rejected.

Next was a vague reference alleging concerns and criticisms about early studies. Had AAP indicated what those alleged concerns and flaws were (or which studies they were), then it would be possible to evaluate or address them. Nonetheless, the argument is a red herring: Because all of the later studies showed the same result as did the early studies, any such allegation is necessarily moot.

Reference 47 was a one-and-a-half page commentary in which the author off-handedly mentions criticisms previously made of three of the eleven outcome studies of GD children, but does not provide any analysis or discussion. The only specific claim was that studies (whether early or late) had limited follow-up periods—the logic being that had outcome researchers lengthened the follow-up period, then people who seemed to have desisted might have returned to the clinic as

cases of “persistence-after-interruption.” Although one could debate the merits of that prediction, AAP instead simply withheld from the reader the result from the original researchers having tested that very prediction directly: Steensma and Cohen-Kettenis (2015) conducted another analysis of their cohort, by then ages 19–28 (mean age 25.9 years), and found that 3.3% (5 people of the sample of 150) later returned. That is, in long-term follow-up, the childhood sample showed 66.7% desistance instead of 70.0% desistance.

Reference 45 did not support the claim that watchful-waiting is “outdated” either. Indeed, that source said the very opposite, explicitly referring to watchful waiting as the *current* approach: “Put another way, if clinicians are straying from SOC 7 guidelines for social transitions, not abiding by the watchful waiting model *avored by the standards*, we will have adolescents who have been consistently living in their affirmed gender since age 3, 4, or 5” (Ehrensaft et al., 2018, p. 255). Moreover, Ehrensaft et al. said there are cases in which they too would still use watchful waiting: “When a child’s gender identity is unclear, the watchful waiting approach can give the child and their family time to develop a clearer understanding and is not necessarily in contrast to the needs of the child” (p. 259). Ehrensaft et al. are indeed critical of the watchful waiting model (which they feel is applied too conservatively), but they do not come close to the position the AAP policy espouses. Where Ehrensaft summarizes the potential benefits and potential risks both to transitioning and not transitioning, the AAP presents an ironically binary narrative.

In its policy statement, AAP told neither the truth nor the whole truth, committing sins both of commission and of omission, asserting claims easily falsified by anyone caring to do any fact-checking at all. AAP claimed, “This policy statement is focused specifically on children and youth that identify as TGD rather than the larger LGBTQ population”; however, much of that evidence was about sexual orientation, not gender identity. AAP claimed, “Current available research and expert opinion from clinical and research leaders ... will serve as the basis for recommendations” (pp. 1–2); however, they provided recommendations entirely unsupported and even in direct opposition to that research and opinion.

AAP is advocating for something far in excess of mainstream practice and medical consensus. In the presence of compelling evidence, that is just what is called for. The problems with Rafferty, however, do not constitute merely a misquote, a misinterpretation of an ambiguous statement, or a missing reference or two. Rather, AAP’s statement is a systematic exclusion and misrepresentation of entire literatures. Not only did AAP fail to provide compelling evidence, it failed to provide the evidence at all. Indeed, AAP’s recommendations are *despite* the existing evidence.

## STIPULATION

(It is hereby stipulated and agreed by and between counsel for the respective parties that reading, signing, sealing, certification and filing are not waived.)

## PROCEEDINGS

---

MARY D. FRY, PH.D.,  
CALLED AS A WITNESS IN THE FOLLOWING PROCEEDING, AND  
HAVING FIRST BEEN DULY SWORN, TESTIFIED AND SAID AS  
FOLLOWS:

---

MS. BURKDOLL: My name is Dana Burkdoll,  
CSR, Notary for the State of Kansas.

ATTORNEY TRYON: We might want to go off  
the record.

VIDEOGRAPHER: Going off the record.

Current time reads 10:03 a.m.

OFF VIDEOTAPE

---

(WHEREUPON, AN OFF RECORD DISCUSSION WAS HELD.)

Page 12

representing Plaintiff.

ATTORNEY KANG: Hi. This is Katelyn  
Kang representing Plaintiffs.

ATTORNEY REINHARDT: This is Elizabeth  
Reinhardt with Cooley, also for Plaintiffs.

ATTORNEY HELSTROM: Zoe Helstrom, with  
Cooley, also for Plaintiffs.

ATTORNEY SWAMINATHAN: This is Sruti  
Swaminathan from Lambda Legal also for Plaintiff.

ATTORNEY SCRUGGS: Johnathan Scruggs with  
Alliance for Freedom for the intervening Defendants.  
And also with me on the Zoom is Rachel Csutoros, also  
for the intervening Defendant.

ATTORNEY CROPP: This is Jeffery Cropp  
from Steptoe & Johnson representing the Defendants  
Harrison County Board of Education and Superintendent  
Dora Stutler.

ATTORNEY GREEN: This is Roberta Green  
here on behalf of West Virginia Secondary School  
Activities Commission.

VIDEOGRAPHER: And if that is everyone we  
can begin.

ATTORNEY TRYON: Is Kelly on the line?  
Did I miss that?

Page 11

---  
ON VIDEOTAPE

VIDEOGRAPHER: We are now back on the  
record my name is Jacob Stock. I'm a Certified Legal  
Video Specialist employed by Sargent's Court Reporting  
Services. The date today is March 29th, 2022. The  
current time reads 10:05 a.m. Eastern Standard Time.  
This deposition is being taken remotely by a Zoom  
conference. The caption of this case is in the United  
States District Court for the Southern District of West  
Virginia, Charleston Division. BPJ, et al. versus the  
West Virginia Board of Education, et al. Civil Action  
Number 2:21-CV-00316. The name of the witness is Mary  
Fry, who has already been sworn in. Will the attorneys  
present state their names and the parties they  
represent?

ATTORNEY TRYON: This is David Tryon  
representing the State of West Virginia and I'm with the  
Attorney General's Office.

ATTORNEY VEROFF: Julie Veroff with  
Cooley, LLP. I represent the Plaintiff. And I'll let  
my co-counsel introduce themselves.

ATTORNEY HARTNETT: Hi. This is Kathleen  
Hartnett from Cooley. I'm in the room with Julie,

Page 13

ATTORNEY GREEN: Actually I just got a  
text from Kelly that she can't locate the link.

ATTORNEY VEROFF: Let's go off the record  
while we reach out to her.

VIDEOGRAPHER: Going off the record. The  
time reads 10:08 a.m.

OFF VIDEOTAPE

---

(WHEREUPON, A SHORT BREAK WAS TAKEN.)

---

ON VIDEOTAPE

VIDEOGRAPHER: We are back on the record.  
The current time reads 10:08 Eastern Standard Time.

ATTORNEY MORGAN: This is Kelly Morgan on  
behalf of the West Virginia Board of Education and  
Superintendent Burch.

ATTORNEY TRYON: Okay.  
Then I think we will move forward now.

So prior to going on the record we would limit  
objections to objection to privilege, objections to  
scope and objections to form which would include all  
other objections, and that is when we say objection  
we'll preserve those objections. Is that acceptable to  
you, Julie?

Page 14

Page 16

1 ATTORNEY VEROFF: Yes, thank you so much.  
 2 ATTORNEY TRYON: Does anybody else have  
 3 any objection to doing it that way? Okay. Then let's  
 4 move forward.

5 ---  
 6 EXAMINATION

7 ---  
 8 BY ATTORNEY TRYON:

9 Q. Hello, Professor Fry. How are you?

10 A. Doing well. Thank you.

11 Q. Do you prefer calling you Professor Green ---  
 12 excuse me Professor Fry? Does that work?

13 A. Sure.

14 Q. Okay.

15 Can you state your full name for the record  
 16 please?

17 A. Mary Diane Fry.

18 Q. Are you represented by counsel this morning?

19 A. Yes.

20 Q. And who is your --- primarily representing you  
 21 today?

22 A. Julie, Julie Veroff.

23 Q. Great. And have you been deposed before?

24 A. I have not.

1 A. Sounds good.

2 Q. And if you answer I'll have to assume that you  
 3 understood the question. Do you understand that?

4 A. Yes.

5 Q. And as we stated off the record, if you need a  
 6 break at any time, let us know. We will break for you  
 7 and the only caveat on that is once I ask a question you  
 8 have to wait until you finish your answer before we can  
 9 take a break.

10 All right?

11 A. Okay. Thank you.

12 Q. Do you have any questions about this proceeding  
 13 before we get started?

14 A. No.

15 Q. Okay.

16 Well, just for the record, this deposition is  
 17 being conducted as on Cross Examination. And Professor  
 18 Fry, did you bring any documents to the deposition  
 19 today?

20 A. Yes.

21 Q. What did you bring?

22 A. I have before me my Declaration, the House Bill,  
 23 my expert report and my Vitae.

24 Q. And when you talk --- mention your Declaration,

Page 15

Page 17

1 Q. Have you testified in court before?

2 A. One time.

3 Q. Tell me about that.

4 A. Years ago my husband and I returned from our  
 5 honeymoon and we found out we had been robbed. And a  
 6 neighbor had seen three guys crawling out of our bedroom  
 7 window, and so I appeared in court to share what was  
 8 missing when we returned.

9 Q. Well, I'm sorry. That doesn't sound like a  
 10 great way to end a honeymoon. So any other times you  
 11 testified at trial?

12 A. No.

13 Q. And when we're speaking, you know, since we're  
 14 in a deposition, this is a communication privilege  
 15 unlike any other, but one of the things that we need to  
 16 make to make it easier for the court reporter to  
 17 understand what we're doing. So when I ask you a  
 18 question please make sure you answer verbally as opposed  
 19 to just nodding your head.

20 Okay?

21 A. Okay.

22 Q. If you don't understand a question that I ask  
 23 you, tell me and I'll try and rephrase.

24 All right?

1 is this the first one that was filed in the case? Is  
 2 that what you mean?

3 A. Yes.

4 Q. Is there anyone else in the room with you at  
 5 this point?

6 A. No.

7 Q. What documents did you review in preparation for  
 8 your deposition today?

9 A. I reviewed my statement and my Vitae and some of  
 10 the Court documents, the Complaint and a cursory review  
 11 of some of the other statements. I reviewed the  
 12 Plaintiff's statement and her mother's statement.

13 Q. Any other Court documents besides the Complaint  
 14 and the statement with the Plaintiff and the mother?

15 A. A cursory review of other expert witnesses and,  
 16 yeah, any of the case documents, a cursory review.

17 Q. Which expert reports did you look at?

18 A. I couldn't call them all by name but the expert  
 19 witnesses that are medical experts.

20 Q. The Plaintiff's experts or Defendants' or both?

21 A. Both.

22 Q. So there is a total of, now including yours,  
 23 eight expert reports. Have you seen all of those?

24 A. You know, I'm not positive. There was a report

1 from two on each side and then a response, and so I ---  
2 and again I didn't read these in detail, but I did have  
3 a look at them.

4 **Q. Okay.**

5 **Was there anything in particular that you were**  
6 **looking for when you looked through those expert**  
7 **reports?**

8 A. No, just trying to get a sense of the case. I  
9 kept a focus on my purpose here today.

10 **Q. And so are you aware of this case? Do you know**  
11 **who BPJ is?**

12 A. Yes.

13 **Q. And who is BPJ?**

14 A. She is a young athlete in West Virginia who is a  
15 transathlete and wanted to play sports in her school.

16 **Q. And you understand BPJ is the Plaintiff.**  
17 **Is that right?**

18 A. Yes.

19 **Q. Do you know who Heather Jackson is?**

20 A. Her mother.

21 **Q. Have you ever spoken to either one of them?**

22 A. I have not.

23 **Q. So I presume by the same rationale you have not**  
24 **met either one of them either.**

1 **filed the lawsuit?**

2 A. You know, it's hard to recall. There's quite a  
3 bit of water under the bridge. I know now that she  
4 wanted to do cheerleading and run track, and I'm not  
5 sure I could tell you the exact date I knew either one  
6 of those.

7 **Q. Okay.**

8 **Let me rephrase my question because I'm not**  
9 **asking what the date was, I'm asking if you now know**  
10 **what --- at this time what sport BPJ participated in?**

11 A. Yes.

12 **Q. And which one?**

13 A. She participated in cheerleading and now track.

14 **Q. And so it was cross-country is that the same**  
15 **thing as track?**

16 A. Sorry, cross-country. It's a different season,  
17 cross-country.

18 **Q. Is that part of track and field or is it**  
19 **different?**

20 A. It's a different season, yeah. I mean,  
21 usually it's grouped together, track and cross-country,  
22 but I should have said cross-country. That is what I  
23 meant.

24 **Q. Okay.**

1 **Correct?**

2 A. I have not.

3 **Q. When did you first hear about BPJ?**

4 A. About a year ago I was contacted by Plaintiff's  
5 Counsel in late April.

6 **Q. And of course, don't tell me anything that your**  
7 **counsel --- any discussions you had after you were**  
8 **retained by counsel, but prior to being retained by**  
9 **counsel --- well, let me back up.**

10 **At one point you were retained by counsel to be**  
11 **an expert in this case.**

12 **Right?**

13 A. Right.

14 **Q. When was that?**

15 A. Late April, early May, I believe.

16 **Q. And what were you first told about the case**  
17 **before you were retained?**

18 A. That this case involved a young athlete who was  
19 headed to Middle School and really wanted to be able to  
20 play sports.

21 **Q. Were you told which sport?**

22 A. I think so at the time.

23 **Q. So at this point in time do you know which**  
24 **sports BPJ wanted to participate in at the time that BPJ**

1 **At the time that you were retained had you**  
2 **already prepared any report similar to what was**  
3 **ultimately filed in this case on your behalf?**

4 A. Yes.

5 **Q. So tell me about that.**

6 A. Okay.

7 **Q. So let me make sure we are communicating. So**  
8 **before you were contacted by counsel for BPJ, had you**  
9 **already prepared something that what was filed as your**  
10 **Declaration?**

11 A. Yes.

12 **Q. Okay.**

13 **Tell me about that.**

14 A. Okay.

15 In the spring of 2020 I was contacted to see if  
16 I would be willing to be an expert witness first in the  
17 Connecticut case, transathlete case and then in Idaho.  
18 And those sort of overlapped in the spring of 2020 a  
19 little bit, but I've been involved in providing expert  
20 reports for both of those.

21 **Q. Okay.**

22 **So you did serve as an expert witness in the**  
23 **Connecticut case.**

24 **Is that right?**

Page 22

1 A. Yes.

2 **Q. Was something that you prepared filed in the**  
3 **Connecticut case?**

4 A. Yes.

5 **Q. Same thing in the Idaho case?**

6 A. Yes.

7 **Q. Have you served as an expert witness in any**  
8 **other cases besides those two?**

9 A. I'm serving as an expert witness in the Florida  
10 case as well.

11 **Q. But you, to date, have not testified in any of**  
12 **those cases.**

13 **Right?**

14 A. That's correct.

15 **Q. And you haven't been deposed in those cases**  
16 **either I take it.**

17 **Right?**

18 A. That's right. I have not.

19 **Q. Have you actually prepared an expert report for**  
20 **Florida at this point?**

21 A. Yes.

22 **Q. Has that been submitted to court yet?**

23 A. I believe so.

24 ATTORNEY TRYON: At this point your

Page 24

1 A. Yes.

2 ATTORNEY TRYON: And Jake, do you have  
3 that marked as Exhibit-1? Are you able to do that?

4 VIDEOGRAPHER: I don't have it marked  
5 with a sticker at the moment, but I can mark them if you  
6 want me to.

7 ATTORNEY TRYON: Yes. That would be  
8 great.

9 VIDEOGRAPHER: Okay.

10 ATTORNEY TRYON: And what I would like to  
11 do, the expert report, which is the one that you  
12 previously brought up, Jake, that would be Exhibit-2.  
13 So if you could bring that up and make sure we all  
14 understand what Exhibit-2 is.

15 ---

16 (Whereupon, Exhibit 2, Expert Report of  
17 Dr. Fry, was marked for identification.)

18 ---

19 ATTORNEY TRYON: Will you be able to mark  
20 these while we are in this proceeding, Jake.

21 VIDEOGRAPHER: I have it on my computer  
22 but I'm not on my computer at the moment. I don't think  
23 I can unless we could go off record for me to do so.

24 ATTORNEY TRYON: We will keep on going

Page 23

1 initial report that was filed with the court, the  
2 initial Declaration. Let's mark that as Exhibit-1 and I  
3 will ask the court reporter to bring that up.

4 ---

5 (Whereupon, Exhibit 1, Declaration,  
6 marked for identification.)

7 ---

8 BY ATTORNEY TRYON:

9 **Q. And feel free to look at your hard copy as we**  
10 **are discussing these exhibits, okay, Professor?**

11 A. Okay.

12 ATTORNEY VEROFF: Sorry. I think this is  
13 the expert report and I think you were asking for the  
14 Declaration.

15 ATTORNEY TRYON: Yes, right.

16 VIDEOGRAPHER: My apologies.

17 ATTORNEY TRYON: It should have the Court  
18 stamp on the left at the top as I recall.

19 VIDEOGRAPHER: I see that. My apologies.

20 BY ATTORNEY TRYON:

21 **Q. So first of all, I want to establish that this**  
22 **is the Declaration that you first prepared for this**  
23 **case.**

24 **Is that right?**

Page 25

1 and ask if you recognize what they are and then maybe  
2 during a break you can do that.

3 VIDEOGRAPHER: That works for me.

4 ATTORNEY TRYON: And for the record we  
5 will be looking at the statute, which we will be marking  
6 as Exhibit-3 to this deposition.

7 ---

8 (Whereupon, Exhibit 3, HB-3293, was  
9 marked for identification.)

10 ---

11 BY ATTORNEY TRYON:

12 **Q. So now let's go to Exhibit-2, which is your**  
13 **current expert report. I'm going to try to manipulate**  
14 **my page so I can see you, Professor, at the same time.**  
15 **I can switch this over to another screen, but it's not**  
16 **working. Let's try this. All right. So looking at**  
17 **Number 4 --- let me back up, paragraph number three, you**  
18 **say you have knowledge of the matters stated in this**  
19 **expert report and Declaration. I have collected and**  
20 **cite to relevant literature concerning the issues that**  
21 **arise in this litigation. Do you see that?**

22 A. Yes.

23 **Q. So what are the issues that arise in this**  
24 **litigation as you understand it?**

Page 26

1 ATTORNEY VEROFF: I'm sorry. I'll just  
2 object to the extent that complete paragraph three  
3 wasn't read.

4 ATTORNEY TRYON: Okay.  
5 BY ATTORNEY TRYON:

6 **Q. Okay.**

7 **Feel free to read the entire paragraph if you**  
8 **want but I'm just asking about that specific clause.**

9 A. The issues that are relevant are that there's a  
10 categorical exclusion of transathletes. And that is of  
11 concern because of the many benefits that athletes reap  
12 from having the opportunity to participate in sports.

13 **Q. Any other issues that arise in this litigation?**

14 A. Nothing comes to mind at the moment.

15 **Q. So that's what you refer to when you say issues**  
16 **arise in this litigation, and you said the categorical**  
17 **exclusion of transgender athletes because of benefits**  
18 **athletes receive from sport. Is that about right? It's**  
19 **not exactly what you said, but that is about right?**

20 A. Yeah, because of the categorical exclusion of  
21 transgender athletes in sports that prevent them from  
22 having opportunities to reap all the benefits in sport.

23 **Q. You have said already on the record and you also**  
24 **say in paragraph four that in preparing this expert**

Page 27

1 **report and Declaration I reviewed West Virginia HB-3293,**  
2 **the bill at issue in this litigation.**

3 **Right?**

4 A. Yes.

5 **Q. So how --- did you read the entire thing?**

6 A. The entire bill?

7 **Q. That's my question.**

8 A. Yes, yes.

9 **Q. What did the legislature say the purpose is?**

10 A. Well, to prevent transgender females from  
11 participating in a sport in West Virginia.

12 **Q. The bill does not use the word transgender at**  
13 **all, does it?**

14 ATTORNEY VEROFF: Sorry. Mr. Tryon, I'm  
15 going to object. If you're going to ask the witness  
16 about the bill, if you could please put it up on the  
17 screen so she could have it in front of her.

18 ATTORNEY TRYON: We will do it in a  
19 moment. I think she's looking at it anyway, so it's  
20 been put up on the screen.

21 ATTORNEY VEROFF: Is that right,  
22 Professor Fry? Do you have a hard copy of the bill in  
23 front of you?

24 THE WITNESS: Yes.

Page 28

1 ATTORNEY TRYON: So that would be  
2 Exhibit-3. Are you finding that, Jake? You're muted.

3 VIDEOGRAPHER: I'm looking in my folder.  
4 I just had it this morning. It might be on my other  
5 computer. Counsel, if you want to go off the record I  
6 can grab that and then get the software to mark these  
7 for you.

8 ATTORNEY TRYON: Okay.

9 How long would that take?

10 VIDEOGRAPHER: Three minutes.

11 ATTORNEY TRYON: Okay.

12 Let's do that.

13 VIDEOGRAPHER: Okay.

14 I apologize truly. Going off the record.

15 The current time reads 10:30 a.m.

16 OFF VIDEOTAPE

17 ---

18 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

19 ---

20 ON VIDEOTAPE

21 VIDEOGRAPHER: We are back on the record.  
22 The current time reads 10:34 a.m. Eastern Standard Time.

23 ATTORNEY TRYON: And Jake, if you could  
24 bring up Exhibit-3 now, please, which is the HB-3293.

Page 29

1 So this has previously been marked but for this  
2 deposition we will mark it as Exhibit-3.

3 BY ATTORNEY TRYON:

4 **Q. So this is the House Bill that you --- the law**  
5 **that you reviewed, Professor Fry?**

6 A. Yes.

7 **Q. Excuse me. And nowhere in here does it use the**  
8 **word transgender, does it?**

9 A. No.

10 ATTORNEY VEROFF: Objection.

11 BY ATTORNEY TRYON:

12 **Q. Take a look at paragraph one --- excuse me,**  
13 **page one, under 18-2-25(e), line 1A, it starts A,**  
14 **legislature hereby finds there are inherent differences**  
15 **between biological males and biological females and that**  
16 **these differences are cause for celebration as**  
17 **determined by the Supreme Court of the United States in**  
18 **United States versus Virginia 1996, in parentheses. Do**  
19 **you see that?**

20 A. Yes.

21 **Q. Do you agree with that statement?**

22 ATTORNEY VEROFF: Objection.

23 BY ATTORNEY TRYON:

24 **Q. Go ahead.**

1 A. Yes.

2 **Q. Number two in parentheses says, these inherent**  
3 **differences are not a valid justification for sex-based**  
4 **classifications that make overbroad generalizations or**  
5 **perpetuate the legal, social and economic inferiority of**  
6 **either sex. Rather these inherent differences are a**  
7 **valid justification for sex-based classifications when**  
8 **they realistically reflect the fact that the sexes are**  
9 **not similarly situated in certain circumstances, as**  
10 **recognized by the Supreme Court of the United States in**  
11 **Michael V. Sonoma County Association of Intercollegiate**  
12 **Athletics, and NIA in parentheses or National Junior**  
13 **College Athletic Association. I goofed that. Sorry. I**  
14 **skipped a page. So continuing it said in Michael M. v.**  
15 **Sonoma County Superior Court 1981, in parentheses, and**  
16 **Supreme Court of Appeals in West Virginia in Israel v.**  
17 **Secondary Schools Commission in 1989 in parentheses.**  
18 **Other than the citations of those cases do you agree**  
19 **with that statement?**

20 ATTORNEY VEROFF: Objection.

21 THE WITNESS: I believe that it's more  
22 complex than just to have a binary understanding of  
23 males and females.

24 BY ATTORNEY TRYON:

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: The first sentence of number  
3 two?

4 BY ATTORNEY TRYON:

5 **Q. I'm sorry. Let me make sure we're clear on the**  
6 **record. The phrase that says these inherent differences**  
7 **are a valid justification for sex-based classifications**  
8 **when they realistically reflect the fact that sexes are**  
9 **not similarly situated in certain circumstances, that**  
10 **clause, as I understand your testimony, you do not agree**  
11 **with in its entirety. Is that true?**

12 ATTORNEY VEROFF: Sorry, Mr. Tryon.  
13 Objection.

14 THE WITNESS: Right, that's true.

15 BY ATTORNEY TRYON:

16 **Q. Okay.**

17 **Number three, it says in the context of sports**  
18 **involving competitive stellar contact --- actually,**  
19 **strike that.**

20 **Let's move down. I want to make sure I**  
21 **understand. These are using terms that are defined**  
22 **below, so I want to see if we have a mutual agreement on**  
23 **the meaning of these terms. And on line 25, as shown on**  
24 **the left-hand side, it defines, quote, biological sex,**

1 **Q. So let me restrict my question to this part. It**  
2 **says these inherent differences are a valid**  
3 **justification for sex-based classifications when they**  
4 **realistically reflect the fact that sexes are not**  
5 **similarly situated in certain circumstances. That**  
6 **clause, do you agree with or disagree with?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: Yeah, I would just say that  
9 it's all --- more complex than just saying that we have  
10 males and females.

11 BY ATTORNEY TRYON:

12 **Q. Okay.**

13 **I'm sorry, what did you say last?**

14 A. Yeah, that it's more complex than just  
15 considering them --- everyone fits tightly into a male  
16 or female category.

17 **Q. And so you would disagree with that statement?**

18 ATTORNEY VEROFF: Objection.

19 THE WITNESS: Yeah, I would agree with  
20 the first sentence, that we shouldn't use these to  
21 discriminate.

22 BY ATTORNEY TRYON:

23 **Q. Does that specific clause, you don't agree with**  
24 **that, is that a fair statement?**

1 **closed quote, means an individual's physical form as a**  
2 **male or female based solely on the individual's**  
3 **reproductive biology and genetics at birth. Do you see**  
4 **that?**

5 A. Yes, I see that.

6 **Q. Is that a fair definition of biological sex?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: I disagree. I think it is  
9 more complex than that.

10 BY ATTORNEY TRYON:

11 **Q. Okay.**

12 **How would you define biological sex?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: Based on multiple factors  
15 besides just the reproductive biology in genetics at  
16 birth.

17 BY ATTORNEY TRYON:

18 **Q. Okay.**

19 **And what would your definition be?**

20 ATTORNEY VEROFF: Objection.

21 THE WITNESS: I'm not sure.

22 BY ATTORNEY TRYON:

23 **Q. Okay.**

24 **Well, the reason I ask is because we are**

probably using these terms throughout this deposition today, so I'm trying to make sure we have a mutual understanding of what biological sex means. So I don't want to try and impose upon you a definition that you are uncomfortable with.

A. Okay.

**Q. So if you could give me something that you would be comfortable with, I would appreciate it.**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, I would feel more comfortable --- yeah, I'm not sure, to be honest.

BY ATTORNEY TRYON:

**Q. All right.**

**So I assume that the definition of female in here you're also uncomfortable with. Is that a fair statement?**

A. Yes.

ATTORNEY VEROFF: Objection.

BY ATTORNEY TRYON:

**Q. How about the definition of male, can we reach an agreement that male means an individual whose biological sex determined at birth is male?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes, I would not agree with

ATTORNEY VEROFF: Objection.

BY ATTORNEY TRYON:

**Q. Can we use that as a definition today?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think it's more appropriate to use the term to refer to people who identify as male.

BY ATTORNEY TRYON:

**Q. So you don't think there is such a thing as a biological male? Is that what you are telling me?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think term biological male is a complex term, that a lot goes into that.

BY ATTORNEY TRYON:

**Q. You're familiar with the term cismale, right?**

A. Yes.

**Q. What does that mean?**

A. Well, first is somebody whose identity aligns with their birth characteristics.

**Q. Okay.**

**What birth characteristics are those?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think the male, female category works in general, but there is people who fall

that.

BY ATTORNEY TRYON:

**Q. You would not agree with that. Does the word male have a meaning to you?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes. I feel like it's related to how people see themselves in terms of male or female.

BY ATTORNEY TRYON:

**Q. So it's only --- the term male only means how somebody sees him or herself?**

ATTORNEY VEROFF: Objection.

THE WITNESS: They view their identity as male and female, I think that's the critical thing.

BY ATTORNEY TRYON:

**Q. And does biology have any importance at all?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes, it does. It's just not the only factor.

BY ATTORNEY TRYON:

**Q. So how about this, how about if we will refer to male today, male or boy, we mean someone whose birth --- on whose Birth Certificate it designates them as male or as male?**

in between and may not be from a biological perspective nice and tightly categorized into either of those categories. So when I say it is complex, it is not just the way somebody was born or one particular, you know, physical characteristic or so.

BY ATTORNEY TRYON:

**Q. Well, I'm just try to understand the term you just gave me. You said that cisgender is someone that identifies in the same --- identifies with the sex that corresponds with their birth characteristics. And I'm asking what you meant when you said birth characteristics.**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, I feel like there's medical terms that go beyond my expertise. But in my understanding, someone can be born and have characteristics of cross gender. So using just a binary system where we categorize and put everyone in either a male or female category is limiting and not helpful.

BY ATTORNEY TRYON:

**Q. So then what is a cisgender person?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Someone who may align physically at birth with one of the genders. And also

Page 38

1 when I say align, those match up with how they perceive  
2 themselves along with their birth characteristics.

3 BY ATTORNEY TRYON:

4 **Q. Again you use that term birth characteristics.**  
5 **I need to know what you mean by that.**

6 ATTORNEY VEROFF: Objection.

7 THE WITNESS: Again, using this in --- in  
8 --- from my perspective, I would listen to the doctors  
9 who study this and say that we can't just classify  
10 people tightly into these categories. And some people  
11 may share characteristics of either gender at birth and  
12 so it may be more complicated.

13 BY ATTORNEY TRYON:

14 **Q. So we still don't even have a definition of**  
15 **cisgender from you.**

16 ATTORNEY VEROFF: Objection.

17 BY ATTORNEY TRYON:

18 **Q. So you don't know what birth characteristics**  
19 **are? Is that what you are telling me?**

20 ATTORNEY VEROFF: Objection, asked and  
21 answered?

22 THE WITNESS: Yeah, I think some people  
23 are born and they fit nicely into these categories of  
24 male and female. I'm just acknowledging that not

Page 40

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: Yeah, I think a medical  
3 professional says that a baby has all the  
4 characteristics of a male, right. I'm just simply  
5 saying that everyone doesn't fit nice and tightly into  
6 that male or female, that there's two cross overs that  
7 the doctors seem to agree on.

8 BY ATTORNEY TRYON:

9 **Q. And what the doctors seem to agree on is what**  
10 **they put on the Birth Certificate, right, at least**  
11 **initially? Fair statement?**

12 ATTORNEY VEROFF: Objection.

13 THE WITNESS: Yeah. I'd say in general  
14 doctors choose one or the other that's closest.

15 BY ATTORNEY TRYON:

16 **Q. So at least for purposes of today, when I say**  
17 **male or boy can we agree that I'm referring to someone**  
18 **who on the Birth Certificate, the original Birth**  
19 **Certificate, it is stated that that person is male?**

20 A. I can agree to proceed that way.

21 **Q. Okay.**

22 **And the same thing with respect to female or**  
23 **girl.**

24 **Right?**

Page 39

1 everyone does. And if they do fit nicely into those,  
2 nicely just meaning that they are --- they, you know,  
3 are considered male at birth and they also perceive that  
4 they are than --- or the other way is female, then that  
5 would be a cisgender person.

6 ATTORNEY TRYON: Jake, how do I get to  
7 the live feed?

8 VIDEOGRAPHER: You mean like the video  
9 feed or like the real time?

10 ATTORNEY TRYON: Yes.

11 VIDEOGRAPHER: Give me one sec, I'll  
12 repost the link.

13 ATTORNEY TRYON: Are you going to put  
14 that in the chat room?

15 VIDEOGRAPHER: It should be visible now.

16 BY ATTORNEY TRYON:

17 **Q. When you --- you used the term now considered**  
18 **male at birth. Can you tell me what you mean by that?**

19 ATTORNEY VEROFF: Objection.

20 BY ATTORNEY TRYON:

21 **Q. I'm not trying to trick you. I'm just trying to**  
22 **establish some definition so we can communicate properly**  
23 **today.**

24 A. Yeah.

Page 41

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: Yes. Can we also agree  
3 that if I -- that I can use the term transfemale to  
4 refer to someone who may share characteristics across  
5 gender and may identify as a female?

6 BY ATTORNEY TRYON:

7 **Q. Let's be clear on that. Please tell me what**  
8 **your definition of trans --- let's first cite what does**  
9 **transgender mean?**

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: Transgender refers to  
12 someone who may have been classified as birth as one  
13 gender but identifies as the other gender.

14 BY ATTORNEY TRYON:

15 **Q. And then transgender girl, can you give me your**  
16 **definition of that?**

17 A. Yes, someone who may have been assigned the male  
18 sex at birth and identifies as female.

19 **Q. And then transgender boy?**

20 A. Someone who may have been assigned female ---  
21 assigned a female gender at birth but perceives ---  
22 identifies with a male sex, male gender.

23 **Q. Now, when I asked you about transgender you said**  
24 **someone classified at birth. And then when I asked you**

1 **about transgender girl you said assigned. Is there a**  
2 **difference between classified and assigned in your mind?**

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: No, there wasn't a  
5 distinction there.

6 BY ATTORNEY TRYON:

7 **Q. Okay.**

8 **And could that sex of a child be assigned**  
9 **before birth?**

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: Yeah, possibly.

12 BY ATTORNEY TRYON:

13 **Q. Going back to the bill itself, on line 12, on**  
14 **page two, in the context of sports involving competitive**  
15 **skill or contact biological males and biological females**  
16 **are not, in fact, similarly situated. Do you agree with**  
17 **that statement?**

18 ATTORNEY VEROFF: Objection.

19 THE WITNESS: I'm not sure what that  
20 statement means by the fact similarly situated.

21 BY ATTORNEY TRYON:

22 **Q. Okay.**

23 **Let's go to the next sentence. Biological**  
24 **males would displace females to a substantial extent if**

1 **Q. Okay.**

2 **I need to apologize at this point. On the**  
3 **floor where I'm at they are doing construction, so**  
4 **periodically you may hear pounding or other noise, and**  
5 **I'm sorry about that.**

6 **Let me ask you about the definition of another**  
7 **word that appears periodically, the word arbitrary. And**  
8 **I looked that up in a dictionary, an online dictionary,**  
9 **Cambridge.org, and the definition it gave me was based**  
10 **on chance rather than being planned or based on reason.**  
11 **Is that a fair definition of arbitrary?**

12 ATTORNEY VEROFF: Objection.

13 THE WITNESS: I'm not sure.

14 BY ATTORNEY TRYON:

15 **Q. Okay.**

16 **What is your definition of arbitrary?**

17 ATTORNEY VEROFF: Objection.

18 THE WITNESS: I'm not sure.

19 BY ATTORNEY TRYON:

20 **Q. You have a Bachelor's Degree.**

21 **Right?**

22 A. I do.

23 **Q. And a Master's Degree.**

24 **Right?**

1 **permitted to compete on teams designated for biological**  
2 **females and then it cites a case. Do you agree with**  
3 **that statement?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: I believe there can be a  
6 fair playing ground for people who are born male and who  
7 receive treatment, follow the rules and play the sport  
8 for them to be able to participate as females.

9 BY ATTORNEY TRYON:

10 **Q. So I take it you do not fully agree with that**  
11 **statement.**

12 **Is that a fair statement?**

13 A. Yeah.

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: I do not.

16 BY ATTORNEY TRYON:

17 **Q. Item Number 5, line 21 says, classification of**  
18 **teams according to biological sex is necessary to**  
19 **promote equal athletic opportunities for the female sex.**  
20 **Do you agree with that statement?**

21 ATTORNEY VEROFF: Objection.

22 THE WITNESS: Not if it means excluding  
23 transgender athletes.

24 BY ATTORNEY TRYON:

1 A. Yes.

2 **Q. So I recall you also have a Ph.D.**

3 **Is that right?**

4 A. That is right.

5 **Q. And you can't define for me what arbitrary**  
6 **means?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: No, not at the moment.

9 BY ATTORNEY TRYON:

10 **Q. You used the word arbitrary in this report, yet**  
11 **you don't know what it means?**

12 ATTORNEY VEROFF: Objection.

13 THE WITNESS: Yeah. Do you want to go to  
14 where I used it?

15 BY ATTORNEY TRYON:

16 **Q. No. I want to know if you, in fact, don't know**  
17 **what arbitrary means?**

18 ATTORNEY VEROFF: Objection. I think the  
19 witness has asked to see where term is used in her  
20 report. And it would be helpful to show it to her for  
21 context.

22 ATTORNEY TRYON: Thank you, Counsel. I  
23 would like the witness to tell me how she doesn't know  
24 --- since she has a Ph.D., she can't tell me what

1 arbitrary means. And then you won't even agree with the  
2 definition that I found in the Cambridge.org Dictionary.

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: Can you repeat that  
5 definition again?

6 BY ATTORNEY TRYON:

7 **Q. Based on chance rather than being planned or**  
8 **based on reason.**

9 A. Okay.

10 I'm going to go back and accept that.

11 **Q. Okay.**

12 **In paragraph seven of your report --- we can go**  
13 **back to the report now. This is Exhibit-2. In**  
14 **paragraph seven that is on the screen or you can look at**  
15 **your hard copy, you mention that you spent five years**  
16 **teaching physical education and coaching tennis at**  
17 **schools and summer camps. Tell me a little bit about**  
18 **your coaching tennis.**

19 A. Yes, I was the head coach of both the boys and  
20 the girls team, high school. And the --- we had a  
21 varsity and a junior varsity team. They competed in the  
22 fall season. That was a team competition. And then the  
23 individual in spring, so it is a year-round sport in  
24 Texas.

1 A. Again, I can't speak for every athlete.

2 **Q. And then when you said there was a girls team,**  
3 **what did that mean? What did you have to be to be on**  
4 **the girls team?**

5 A. Yeah. And in general, they are females and see  
6 that classification as appropriate and participate as  
7 females.

8 **Q. And why is that classification appropriate for**  
9 **tennis?**

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: I think it's in general  
12 appropriate to have --- to let males and females compete  
13 separately.

14 BY ATTORNEY TRYON:

15 **Q. Is that because in general males are better at**  
16 **tennis?**

17 ATTORNEY VEROFF: Objection.

18 THE WITNESS: I wouldn't agree with that.

19 BY ATTORNEY TRYON:

20 **Q. Then why is it appropriate to let them compete**  
21 **separately?**

22 ATTORNEY VEROFF: Objection.

23 THE WITNESS: Yeah, I think males would,  
24 in general, due to, you know, their physical

1 **Q. So why did they divide it between varsity and**  
2 **junior varsity?**

3 A. Because some of the kids are --- because it  
4 gives the more advanced athletes a chance to compete at  
5 the varsity level and can be very inclusive and give a  
6 lot of kids an opportunity to play also as well with a  
7 junior varsity.

8 **Q. And you had no problem with that, right?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: That's right.

11 BY ATTORNEY TRYON:

12 **Q. And then you said they divided it into boys and**  
13 **girls teams. Why did they do that?**

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: Because, in general, that  
16 classification works, but there are exceptions to it.

17 BY ATTORNEY TRYON:

18 **Q. And when you said boys, what did you mean by**  
19 **boys?**

20 A. I mean those who may have been classified as a  
21 male in their lives and also identify that way.

22 **Q. So the team, the tennis team was based on those**  
23 **who were born, classified as males and also identified**  
24 **that way?**

1 characteristics would have a --- could have an  
2 advantage.

3 BY ATTORNEY TRYON:

4 **Q. What kind of advantage?**

5 ATTORNEY VEROFF: Objection.

6 THE WITNESS: Yeah, greater --- greater  
7 testosterone levels, which can lead to --- which can  
8 impact muscle mass and size.

9 BY ATTORNEY TRYON:

10 **Q. As the coach, did you actually observe that**  
11 **there was a difference, performance difference between**  
12 **boys and girls teams?**

13 A. I would ---.

14 **Q. I'm sorry. Let me rephrase that. As the coach,**  
15 **did you actually observe that there was a performance**  
16 **difference between boys and girls?**

17 A. Yes.

18 ATTORNEY VEROFF: Objection.

19 THE WITNESS: I think if you compare the  
20 mean level of ability across the two, then there is a  
21 moderate difference, but there was --- there was big  
22 differences within each gender. I had some very  
23 talented males and some males that were not very  
24 talented. And the same with females. Ability levels

1 really varied. And I had females across my years  
2 coaching high school that were stronger than males. So  
3 it is not a --- you have to be careful to say that every  
4 male out performs every female because that has not been  
5 my experience.

6 BY ATTORNEY TRYON:

7 **Q. Understood. On the average, though, is it safe**  
8 **to say that the boys out perform the females?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: Right, if we just look at a  
11 mean across the gender, yes.

12 BY ATTORNEY TRYON:

13 **Q. Okay.**

14 **You used the word mean instead of average. Can**  
15 **you explain?**

16 A. Yes, on average.

17 **Q. Okay.**

18 **I just want to make sure we are communicating**  
19 **correctly.**

20 A. Sure.

21 **Q. Have you ever done --- looked at the standard**  
22 **deviation, the bell curve for each of those groups?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: I'm familiar with the bell

1 **deviation, do you know if the first standard deviation**  
2 **would overlap between two groups?**

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: I think so in high school  
5 tennis, right.

6 BY ATTORNEY TRYON:

7 **Q. Okay.**

8 **Have you actually --- that's from just your**  
9 **generalized experience, but have you actually done a**  
10 **data compilation to determine that?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: No.

13 BY ATTORNEY TRYON:

14 **Q. Do you know of such a thing, any studies that do**  
15 **that?**

16 A. I couldn't identify specifically studies, but  
17 when I see these things like if I --- if I pick up the  
18 Kansas City paper or after the marathon I see males and  
19 females interspersed all the way through with their  
20 times, right. So it's not a thing where every male that  
21 ran the marathon out performed every female that ran the  
22 marathon. So I think it's pretty consistent that those  
23 differences are smaller, too, if we are not talking  
24 about the elite of elite athletes.

1 curve. Do you mean ---?

2 BY ATTORNEY TRYON:

3 **Q. Okay.**

4 **Have you looked at the bell curve for**  
5 **performance between those two groups of tennis players,**  
6 **boys versus girls?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: Okay.

9 I have been --- I haven't collected data  
10 that I could share from when I coached high school.  
11 What I could say is that, if we took any skill, let's  
12 say their ability to serve accurately or hit a crisp  
13 volley or hit a solid backhand across the court, that  
14 their --- those bell curves are very close to each  
15 other, but overall for just looking at the two groups  
16 the boys could have a slight advantage. But those two  
17 bell curves, if we are looking at the bottom of those,  
18 you're going to say there is tremendous variability with  
19 the males and females. And so it is easy to get kind of  
20 focused on this small mean difference across gender when  
21 there is huge differences across, you know, each gender  
22 as well.

23 BY ATTORNEY TRYON:

24 **Q. Understood. As far as the first standard**

1 **Q. When you were coaching, how long did you coach?**

2 A. I coached four years full time and then my  
3 graduate program at Greensboro I was --- I had an  
4 assistantship at a Middle School to teach --- to assist  
5 teachers with teaching physical education.

6 **Q. In paragraph eight of your report it says that**  
7 **you graduated with a Master of Science in sports**  
8 **psychology/pedagogy from the University of North**  
9 **Carolina in Greensboro, North Carolina, in 1990. During**  
10 **that did you take any classes in sports biomechanics?**

11 A. I believe I took one.

12 **Q. What is sports biomechanics?**

13 A. Sports biomechanics looks at the study of  
14 movement and how to optimize skills and movement  
15 patterns.

16 **Q. And is it fair to say that the biomechanics of**  
17 **males and females are different?**

18 ATTORNEY VEROFF: Objection.

19 THE WITNESS: With regard to everything  
20 across the board, like walking?

21 BY ATTORNEY TRYON:

22 **Q. In athletics --- well, we'll talk about in**  
23 **walking. Is it different in walking?**

24 ATTORNEY VEROFF: Objection.

1 THE WITNESS: I would say there is more  
2 similarity across the genders, more variability with age  
3 than across genders on most movements.

4 BY ATTORNEY TRYON:

5 **Q. Okay.**

6 **So you don't think there is a difference**  
7 **between males and females in the context of**  
8 **biomechanics?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: Yeah, I think I just need  
11 something more specific, right, if males in general can  
12 generate more power or something in a particular  
13 movement, that may be the case. It is not my area of  
14 expertise.

15 BY ATTORNEY TRYON:

16 **Q. Okay. Fair enough. Are you a psychologist?**

17 A. I am not.

18 **Q. Are you a psychiatrist?**

19 A. No.

20 **Q. Have you had any clinical experience seeing any**  
21 **patients?**

22 A. Not clinical experience, no.

23 **Q. Other types of experience seeing patients?**

24 A. No.

1 **Q. And so I presume you never treated any**  
2 **patients?**

3 A. That's correct.

4 **Q. Have you ever worked as a counselor or social**  
5 **worker?**

6 A. No.

7 **Q. Have you ever counseled with kids on either a**  
8 **formal basis or informal basis on mental health issues?**

9 A. I'm on the educational side of sports psychology  
10 and so I might provide educational information, right,  
11 about how to develop strong mental skills, right, that  
12 are going to help you enjoy your sport better and  
13 perform better, right. It's all on the educational  
14 side, so not on a diagnosis side or treatment of mental  
15 health. That would be beyond my credentials and I would  
16 refer athletes to someone else.

17 **Q. Okay.**

18 **Have you ever counseled with kids on gender**  
19 **dysphoria issues?**

20 A. I have not.

21 **Q. Have you counseled with kids or young adults on**  
22 **transgender issues?**

23 A. I have not. To say that would be beyond my  
24 expertise and training.

1 **Q. Fair enough.**

2 ATTORNEY TRYON: Well, we've been going a  
3 little over an hour. I'm happy to keep on going. But  
4 if you need a break, let me know.

5 ATTORNEY VEROFF: I think it would be  
6 good to take a short break.

7 VIDEOGRAPHER: Going off the record. The  
8 current time reads 11:15 Eastern Standard Time.  
9 OFF VIDEOTAPE

10 ---

11 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

12 ---

13 ON VIDEOTAPE

14 VIDEOGRAPHER: We are back on the record.  
15 The current time reads 11:27 Eastern Standard Time.

16 BY ATTORNEY TRYON:

17 **Q. In paragraph nine of your report you refer to a**  
18 **Coacher's Guide of Maximizing Youth Sport Experience.**  
19 **And did you write that whole book?**

20 A. With colleagues, we did.

21 **Q. Does that book address transgender athletes at**  
22 **all?**

23 A. It addresses how to create an environment that  
24 can be inclusive and help all athletes have a great

1 experience. It's not specifically written --- you know,  
2 it's not about about transgender athletes overall. What  
3 I would say they're included in the sense that it is  
4 beneficial to be inclusive in sport.

5 **Q. Is the term transgender, does it appear in the**  
6 **book at all?**

7 A. Beyond -- I'm not sure.

8 **Q. When was that book written?**

9 A. It was released in 2020.

10 **Q. When was the first time that you became aware of**  
11 **the issue of transgender girls participating in girls**  
12 **sports?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: I'm not sure. Years ago. I  
15 take conferences regularly, or sports psychology  
16 conference, and there has been sessions for a long time.

17 ATTORNEY TRYON: Let me ask you to take a  
18 look at some documents. Jake, if you can pull up the  
19 document Cortisole and Stress Response during the Game  
20 and Practice in Female Collegiate Soccer Players.

21 VIDEOGRAPHER: Do you want that marked?

22 ATTORNEY TRYON: Yes, this would be  
23 Number 4.  
24 ---

(Whereupon, Exhibit 4, Article by Dr. Fry, was marked for identification.)

---

ATTORNEY TRYON: And just for the court reporter, my name is spelled T-R-Y-O-N.

BY ATTORNEY TRYON:

**Q. Okay.**

**This is a document, an article that you wrote, correct, Professor Fry?**

A. This was a Master's thesis from one of our students and I served on her committee.

**Q. I see. Who is Andrew Fry?**

A. He's my husband.

**Q. Okay.**

**Why did this document only focus on female soccer players?**

A. Typically, in a Master's thesis you kind of can keep things smaller and tighter, and it's not like a doctoral dissertation I think would be one of the key reasons. There's probably been less research with females and cortisol because it's a little more complicated with menstrual cycles and all that, too. And I think this athlete --- I'm sorry, this student was very interested in any female student to the literature.

**Q. Do you know how the student identified if someone was a female?**

A. I think she used a female collegiate soccer team and so those were female athletes on the team.

**Q. Do you know if any of those female athletes were transfemales?**

A. No, I don't.

**Q. Would that have made a difference for the study if some were transfemales and others were what I would call biological females?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I don't know. And I think it would depend on where the transathletes were.

BY ATTORNEY TRYON:

**Q. Where they were? What do you mean?**

A. I'm sorry, where they --- I'm sorry, Dana just came in with cords and I got distracted for a second. With where they were in the transitioning process.

ATTORNEY TRYON: Okay.

If you could bring up the next document, Examination of the Psychometric Properties of Perceived Motivational Climate in Sports Questionnaire.

VIDEOGRAPHER: I'm sorry. Can you repeat that title?

**Q. Is there a difference in cortisol and stress responses between male and female soccer players?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, you know, this is --- I would need to review this. And again, it's beyond my expertise in looking at gender differences in cortisol.

BY ATTORNEY TRYON:

**Q. So I'm a little puzzled. You said that you're on the committee to review the students' work. Did I get that about right?**

A. I helped with this project, but this was her thesis research, and she also had some I think psychological measures. This has been a while. It was published in 2007, but she was --- I'm not even sure I could tell you what year she graduated or if this was right over, but you know, quite a bit of time has passed. I would have to go back and review this and it is not my primary area of expertise, but I was an author on this paper.

**Q. So when you say you're an author, does that mean you wrote portions of it or just supervised it?**

A. You know, it varies and I would have to go back to this one. Honestly, in reviewing it, I haven't looked at this in a long time.

ATTORNEY TRYON: Yes. Examination of the Psychometric Properties of the Perceived Motivational Climate in Sports Questionnaire.

VIDEOGRAPHER: Okay.

Just give me one moment?

THE WITNESS: You may want to take this home for bedtime reading tonight, right.

ATTORNEY TRYON: This is now marked as Exhibit-5, I believe.

---

(Whereupon, Exhibit 5, Article, was marked for identification.)

---

BY ATTORNEY TRYON:

**Q. Have you seen this document before?**

A. I have. It's been a while since I looked at it, but, yeah, I have.

**Q. And what is the purpose of this document?**

A. So there was a measure, a perceived motivational climate of sports questionnaire. And Maria Newton in her dissertation, she wanted to expand on the measure and create little subscales within what we call task in ego involving climates. And I think she ran it with a couple of samples here just to be able to test the

psychometrics of the measure.

**Q. Why was this one limited to female athletes?**

A. It's a good question. Why does any researcher includes females, males and/or both? Maria had access to, as I remember, a massive tournament, volleyball tournament, and could get the group onboard and be able to access a lot of teams because research is hard to do. You really need to be able to access a number of teams and she was able to do that with this study.

**Q. So you don't know why it would be separated to be only for female athletes?**

A. I think she was only interested in volleyball and in particular females.

**Q. Is there a difference in volleyball between female and male athletes?**

ATTORNEY VEROFF: Objection.

THE WITNESS: A difference in what sense?

BY ATTORNEY TRYON:

**Q. In psychometric properties, the perceived motivational climate?**

A. Okay.

So while she didn't look at that in the study because she only had females, so we just have to look at the broader literature, right. And the theory

**Q. So just to be clear, you are not an exercise physiologist, right?**

A. I am not.

**Q. And you are not a medical doctor.**

Correct?

A. That's correct.

**Q. And you don't have expertise in the science of performance advantage, do you?**

A. No.

**Q. And you have no expertise in sports safety. Is that true?**

A. Yes, true.

**Q. And do you have any expertise in concussion management?**

A. No.

**Q. Do you have any expertise in ACL injuries?**

A. No.

**Q. Have you done any research studies or papers regarding transgender females in sports?**

A. No.

**Q. Have you taught any classes on that?**

A. Not like a complete course, but it's a topic that we can cover in our undergraduate score psychology class.

predictions hold up in that athletes can perceive the climate as very task involving or ego involving, right. And in some samples athletes, you know, males or females may see it one way or another more, but the predictions just align consistently that if you perceive the task involving climate at least to good things. Like people have more fun and try harder, they're more committed to their sports, they have better relationships with others, those kind of things.

**Q. All right.**

ATTORNEY TRYON: I'm finished with that exhibit then. Let me then ask you some other questions.  
BY ATTORNEY TRYON:

**Q. Is your expertise limited to sports psychology?**

A. Sports psychology is a broad term, you know, but yes, I would say that is my expertise. I don't know if you would consider youth sport as a part of that.

**Q. I'm sorry. I missed what you said.**

A. The youth sport.

**Q. Oh, youth support?**

A. Yes, in particular within sports psychology my focus has been on youth.

**Q. Okay.**

A. Not exclusively.

**Q. And so is that a class that you teach?**

A. Yes.

**Q. And what exactly have you covered with regard to transgender females in that class?**

A. So late this semester I'm teaching the class and later in April we have a trans --- a transfemale who is a retired athlete and coach coming in for that day and we will probably take a partial class before that just to have some discussions and lay some groundwork. It is an educational session where we just --- we have students who may be well informed and passionate about transathletes in sport and we have had other students who have had very little exposure. So it's not a big --- it's not a big chunk of the class, right, it's a class or two that we touch on it.

**Q. Aside from any research, have you attended any seminars or classes on transgender females in sports?**

A. Yes. Typically at our national conference, the Association of Applied Sports Psychology, you know, that's a jam-packed schedule, and probably most conferences I'll sit in on a session. Sometimes they --- they will do a webinar, things like that. So over the years, yes, I have participated in those.

**Q. Have you reviewed any literature on transgender**

1 **participation in sports to prepare your opinion in this**  
2 **case?**

3 A. Like over the last two years I've read some. I  
4 couldn't point or identify, hey, this is exactly the  
5 literature I've read. Just someone who's reading often  
6 in my --- you know, within sports psychology.

7 **Q. Your bibliography doesn't include any papers**  
8 **studying transgender athletes, does it?**

9 A. No.

10 **Q. And have you done any studies or papers**  
11 **regarding the harm to motivation on females when**  
12 **biological boys or trans/transgender girls are allowed**  
13 **to compete on girls teams?**

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: I have.

16 BY ATTORNEY TRYON:

17 **Q. Do you mean have not?**

18 A. I'm sorry, have not.

19 **Q. Have you taught any classes on that topic?**

20 ATTORNEY VEROFF: Objection.

21 THE WITNESS: I have not.

22 BY ATTORNEY TRYON:

23 **Q. Have you attended any seminars or classes on**  
24 **that topic?**

1 **there.**

2 VIDEOGRAPHER: I would note that we  
3 gained another participant. If they would identify  
4 themselves for the record.

5 ATTORNEY PELET: Good morning. My name  
6 is Valeria Pelet del Toro for Cooley, LP, for Plaintiff  
7 BPJ.

8 THE WITNESS: Thank you for that time.  
9 The Hogue, Fry and Fry 2017, I have to review that  
10 paper. I can't remember if there were any gender  
11 differences. These were Middle School kids who  
12 were ---.

13 BY ATTORNEY TRYON:

14 **Q. Let me stop you for just a second. Can you tell**  
15 **me what page that's on?**

16 A. Yes, page 14, the second from the last  
17 reference.

18 **Q. And which one is it again?**

19 A. The Hogue Fry and Fry, 2017.

20 **Q. Page 14 you said?**

21 A. Yes, page 14, the second reference from the  
22 bottom of the page.

23 **Q. I'm seeing Walling, M.D.**

24 A. Okay. Sorry.

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: I have not.

3 BY ATTORNEY TRYON:

4 **Q. Have you prepared any papers regarding**  
5 **differences for motivation between males and females?**

6 ATTORNEY VEROFF: Objection.

7 THE WITNESS: Yes.

8 BY ATTORNEY TRYON:

9 **Q. Okay.**

10 **Well, what are those?**

11 A. Okay.

12 I think in, oh, gosh --- in --- sometimes in  
13 papers we, you know, we see if there were gender  
14 differences in terms of motivation. When there are  
15 differences they're slight and we are back to that bell  
16 curve mean thing that there might be a slight difference  
17 but they don't impact the hypotheses in the sense that  
18 --- in the sense that someone has a high task  
19 orientation and/or perceives a task involving climate or  
20 caring climate, whether you are male or female those  
21 predictions hold up in terms of the outcomes.

22 **Q. Are there papers in your bibliography that would**  
23 **show that to be the case that it's the same for boys and**  
24 **girls. Feel free to take a look at it. You have got it**

1 **Q. Maybe the pagination is different on your copy.**

2 A. I'm sorry. Are you looking at the expert report  
3 and Declaration?

4 **Q. Yes, I am.**

5 A. Okay.

6 It should be the same. If you go in  
7 alphabetical order, Hogue with an H, H-O-G-U-E.

8 **Q. Okay.**

9 **Here is the issue. I see. Hogue, et cetera.**

10 A. Yes.

11 **Q. There's two by Hogue. Which year? They're both**  
12 **2013.**

13 A. The 2017.

14 **Q. What is the title?**

15 A. The title is the Differential Impact of  
16 Motivational Climate on Adolescents Psychological and  
17 Physiological Stress Responses.

18 ATTORNEY TRYON: It is on page three.  
19 Can you bring that up, Jake? It is under 14.

20 VIDEOGRAPHER: I was trying to look for  
21 it too.

22 ATTORNEY VEROFF: I think there is two  
23 page 14s. So there is a bibliography that directly  
24 follows the expert report and then there is the

1 citations that are encompassed in Exhibit A, the first  
2 page 14.

3 ATTORNEY TRYON: Thank you, Julie, for  
4 helping us out with that. I see it now. I'm sorry for  
5 that confusion.

6 BY ATTORNEY TRYON:

7 **Q. You were going to explain that paper.**

8 A. I'm sorry. Did you ask me to explain the paper?

9 **Q. Yes. You were starting to talk about that, so I**  
10 **would appreciate if you could talk about that?**

11 A. So in this study Middle School kids are  
12 recruited to participate in an intervention. They come  
13 in and they learn an activity. And they're assigned ---  
14 randomly assigned to either caring task involving  
15 climate or an ego involving climate. And as they  
16 participate across the interventions, their cortisol is  
17 measured. Cortisol is a stress hormone and it can  
18 indicate that people are experiencing higher stress.  
19 And so in this study we found that athletes in the  
20 caring task environment climate, their cortisol levels  
21 actually decreased, right, suggesting that they were not  
22 stressed. In addition they had more fun, they indicated  
23 they tried harder, they made more progress learning the  
24 activity, they experienced, you know, less shame, less

1 **difference between them that is?**

2 A. Yeah. I think with any of these studies,  
3 honestly, I just have to go back and see if there were  
4 any minor little differences between gender, but across  
5 gender the results are consistent.

6 **Q. Okay. All right.**

7 **Let me ask you, have you prepared any papers**  
8 **regarding motivations for biological boys identifying as**  
9 **girls?**

10 A. I have not.

11 **Q. Have you prepared any papers regarding**  
12 **transgender girls?**

13 A. I have not.

14 **Q. Have you studied that issue?**

15 A. No.

16 **Q. Would that be something worth studying?**

17 A. It could --- I'm sorry. Could you repeat that?

18 **Q. Motivation regarding transgender girls?**

19 A. Yes, it could be valuable.

20 **Q. As far as you know, has anyone studied that?**

21 A. Yeah, I --- you know, I hear people saying, you  
22 know, that there is just going to be more and more  
23 research coming out. I think there is isolated papers  
24 out there probably that people have had a look at or ---

1 embarrassment, less anxiety. That is what I'm recalling  
2 from memory, okay. There are probably a couple of other  
3 things.

4 And if they participated in an ego involving  
5 climate you got to flip all of those. They didn't have  
6 as much fun, didn't indicate that they wanted to  
7 continue with the activity and their cortisol levels  
8 were significantly higher than those in the other group.  
9 And the results were consistent for males and females.  
10 What I would have to go back and check is were there any  
11 --- going back to these slight mean differences, were  
12 there any differences between the males and females in  
13 the other variables. And that I couldn't tell you  
14 without reviewing it. But in general, the purpose of  
15 the study was to see how this environment affects kids  
16 and the results were similar for males and females.

17 **Q. And what age group was that?**

18 A. This was Middle School, so six, seven and eight  
19 graders. I think it leaned heavier on the six grade,  
20 seven grade participants, but the mean age was probably  
21 12.

22 **Q. Any other papers in your bibliography talking**  
23 **about whether or not there is a difference between males**  
24 **and females and how they are motivated, if there is any**

1 but I couldn't name them right now for you.

2 **Q. Have you prepared any papers regarding coaching**  
3 **transgender girls versus biological girls?**

4 A. I have not.

5 ATTORNEY VEROFF: Objection.

6 BY ATTORNEY TRYON:

7 **Q. Are you aware of any studies that do address**  
8 **that?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: No.

11 BY ATTORNEY TRYON:

12 **Q. Have you prepared any papers regarding the**  
13 **opportunity for collegiate athletic scholarships**  
14 **motivates student athletes?**

15 A. Have I prepared any papers?

16 **Q. That is my question.**

17 A. No.

18 **Q. Would you agree that the opportunity for**  
19 **collegiate athletic scholarships does, in fact, motivate**  
20 **the student athletes?**

21 A. Some student athletes.

22 **Q. Now, you qualify that as some. Any idea what**  
23 **that percentage might be?**

24 A. No.

**Q. Are you familiar with Title 9?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes, to some degree.

BY ATTORNEY TRYON:

**Q. Tell me what your understanding of Title 9 is in the context of girls sports.**

ATTORNEY VEROFF: Objection.

THE WITNESS: More opportunities are provided to girls to the same degree as boys and that fairness is given across other aspects of resources and so on, facilities and things like that.

BY ATTORNEY TRYON:

**Q. Have you ever written any papers on Title 9?**

A. No.

**Q. Have you written any papers on college scholarships for girls?**

A. On college scholarships for girls?

**Q. Yes.**

A. No.

**Q. So you wouldn't be an expert on that, would you?**

A. No.

**Q. Have you submitted any comments to the Department of Education on proposed rules or regulations under Title 9?**

their potential or help them perform better. It is a mix of the organization. There are people who are faculty members and people that are involved in the team, are involved in programs but there's also people that are trained on the clinical side or that are more focused on sort of counseling aspects of sports psychology.

**Q. Are you actually a member of the organization?**

A. Yes, I am.

**Q. Now, on the website it said that there is 2900 members in 50 countries. Is that about right to your knowledge?**

A. That sounds right.

**Q. So I divided that out. That would be 58 per country. That doesn't sound very big per country. So let me ask you, do you know how many of those are members are in the United States?**

A. I don't know. I would guess it's heavily weighted in the U.S. I would say over half. I think there's a lot of countries that might have one person or so. So even though 50 countries are represented, you know, some of them are small and may have a really small participation, right.

**Q. Okay. Fair enough.**

A. No.

**Q. Let me ask you a question a little bit different than the one earlier. Can the opportunity for scholarships for girls collegiate sports be a motivator for girls to compete in girls sports?**

A. It can be for some athletes.

**Q. So in paragraph 11 of your expert report, which is Exhibit-2, it says on the national level I've served with the Association of Applied Sports --- Sport Psychology, AASP, as a member of the Program Review Committee. That is correct, isn't it?**

A. Yes.

**Q. It's my understanding that the purpose of that organization is primarily to help train coaches.**

**Is that fair?**

A. No, that would be not accurate.

**Q. Tell me the purpose of it.**

A. Okay.

It is an organization of professionals that work in the area of sport and exercise psychology and to say there's probably two aims, that these professionals are trying to help people, a wide variety of people across the lifespan reap off the benefits from participation in physical activity and also help people perform up to

**So you mention in this paragraph the certification exam. So there is a certification exam. Is that right?**

A. Yes. It's pretty new. There has been a certification. The fact that it is exam based is a new direction over the last few years.

**Q. What is the purpose or meaning of that certification?**

A. It's called CMPC, Certified Medical Performance Consultant, and it is good for the field because the people who have that credential, it designates sort of, you know, acceptable level of competence to go out and to work with athletes and coaches. So there is a number of courses people have to have. They have to have hours of training working directly with athletes. And then when they complete all those requirements they take --- they take an exam.

**Q. Have you taken the exam?**

A. I'm --- I'm about to in the coming months. A little back story on this is that the certification originally came out as I was wrapping up my doctoral training, and I would have needed to stay another year to get the other requirements that I was missing and my doctoral advisor at the time said, you know, yeah, I'd

1 just go and graduate and get rolling in your career.  
2 And she wasn't sure if this would take off or how big a  
3 deal it would be, and so over the years it has been sort  
4 of slow to take off. I have, for example, people come  
5 and say do you have this AASP Certification until the  
6 last year or two. So I think the public is becoming,  
7 you know, more aware of it.

8 I was asked to write the chapter in the  
9 Essentials Text, which is really the text for people to  
10 prepare for the exam. And so I was asked to write the  
11 motivation chapter, a key chapter on motivation  
12 theories. And so there's this double blind system on  
13 writing one of the chapters that I needed to wait longer  
14 to actually take the exam. But currently I'm an  
15 approved mentor to train students who are seeking the  
16 certification.

17 **Q. But you don't have the certification at this**  
18 **point.**

19 **Correct?**

20 A. Right. Just as a mentor. I have --- I received  
21 all the thumbs up on every --- on --- you know, you  
22 submit a packet of materials showing you have all the  
23 credentials and all. So I've done that. I just need  
24 now to sit for the exam. And I haven't done that yet.

1 I will probably do it once the semester is over.

2 **Q. Do you consider yourself an athlete?**

3 A. I'm smiling. I do.

4 **Q. Okay.**

5 A. I work closely with the Women's Inner Sport  
6 Network in Kansas City and they say that should be the  
7 mantra. Every female should say I'm an athlete. I'm  
8 not currently competing.

9 **Q. Okay.**

10 **What sports have you participated in?**

11 A. Tennis and softball were my primary sports.

12 **Q. And when did you compete in or participate in**  
13 **those?**

14 A. Softball was kind of a Middle School thing and I  
15 transitioned to tennis as I hit high school and competed  
16 through high school and college and then probably  
17 through my 20s still competing in tournaments around the  
18 state.

19 **Q. So after college were you still competing in**  
20 **some fashion?**

21 A. I was, yeah. Just one of the nice things about  
22 teaching and you have that summer break. And my friends  
23 enjoyed playing so we would play in tournaments around  
24 the state.

1 **Q. Did you want to win?**

2 A. I did.

3 **Q. And so were you --- let's go back to the terms**  
4 **you already mentioned, like ego oriented and task**  
5 **oriented, right?**

6 A. Uh-huh (yes), yes.

7 **Q. And so tell me just in layman's terms what those**  
8 **mean.**

9 A. Okay.

10 They were developed in a theory by a guy named  
11 John Nicholls and he said --- what he was really --- the  
12 question he was trying to address is what should we be  
13 doing if we are trying to help every athlete reach their  
14 own potential. And so his theory it has three facets to  
15 it. One is the goal orientation and those refer to your  
16 personal definition of success. And so some people ---  
17 he identified two, task orientation and ego. And people  
18 who have a high task orientation, they really feel most  
19 successful when they can walk away knowing they gave  
20 their best effort and they're focused on their  
21 improvement over time. But that is where genuine  
22 feelings of success come.

23 In contrast, some people have a strong ego  
24 orientation and they're more focused on how they compare

1 to everyone or are they winning. And they may say,  
2 yeah, good for me, I tried hard, who cares. What I care  
3 about is how did I compare to everyone. Did I  
4 demonstrate confidence? Did I look better than others,  
5 did I win?

6 **Q. And can somebody have both an ego orientation**  
7 **and a task orientation?**

8 A. Yes. They can be high in both, high in one and  
9 low in another.

10 **Q. And when you were playing tennis, were you ---**  
11 **which one were you? Ego oriented or task oriented?**

12 A. I think I've always had a high task orientation.  
13 I just loved sport and the chance to compete, and I  
14 would say I had a moderate ego orientation.

15 **Q. Is one better than the other?**

16 A. It depends what your aim is. If we want  
17 athletes to have fun and to keep playing and to try hard  
18 to have good relationships with others and to be good  
19 sports, then we should try to promote task orientation  
20 because ego orientation is not related to those things  
21 pretty consistently.

22 **Q. And under your theory then should we try to**  
23 **suppress ego orientation?**

24 A. No. I think the second part of the theory is

1 what kind of environment we create for our athletes, and  
2 so the research is very strong in this area suggesting  
3 many benefits when we can create a task and a caring  
4 climate for athletes. So the problem with the climate  
5 for a coach is that you really need to pick what am I  
6 going to do because you can't do both or it becomes a  
7 wash or a neutral environment. So those features of  
8 each of the climates, they're really in direct contrast  
9 with one another.

10 **Q. When you say you are an athlete, what does that**  
11 **mean to be an athlete?**

12 A. You know, for me it means someone who just loves  
13 having the opportunity to do their best and to try and  
14 improve and to walk away on one --- you know, today I'm  
15 going to go out there, I'm going to give my best and  
16 tomorrow I'm going to get up and go do it again whatever  
17 happened, right, because there is just so much fun and  
18 joy that comes from having that opportunity.

19 **Q. So just as I recall you said you do like to win,**  
20 **right?**

21 A. I do.

22 **Q. And you can like to win and want to win whether**  
23 **you are personally ego oriented or task oriented, right?**

24 A. Absolutely. I mean, who plays sports and

1 please stay out of the way, go sit at the end of the  
2 bench, go down to the end of the court because I'm  
3 working with these few star athletes I've got here, then  
4 yeah, it would be discouraging.

5 **Q. Would you agree that rules are important in**  
6 **sports?**

7 A. Yes.

8 **Q. So you mentioned you have played tennis and**  
9 **softball. And what other sports are you familiar with?**

10 A. Played a little bit of volleyball going through  
11 --- yeah, you know, I grew up in Texas and tennis is  
12 just a year-round sport, right.

13 **Q. Right.**

14 A. So that is a lot of my experience. My son is a  
15 baseball player, so I've watched an awful lot of  
16 baseball as well.

17 **Q. Are you familiar with track and cross-country**  
18 **even though you haven't done it?**

19 A. Yeah, yes.

20 **Q. Are you familiar with football?**

21 A. Yes.

22 **Q. So how about basketball?**

23 A. Yes.

24 **Q. Who is going to go on in the final four?**

1 doesn't want to win. I mean, that's just sort of a  
2 given. What does winning mean for us, right? Is it a  
3 chance for me to kind of put my chest out and say I'm  
4 better than you, I beat you, or is it kind of a  
5 celebration of me being able to say, boy, I've worked  
6 hard and I can see I'm improving, right.

7 **Q. Right. But if you are in an environment where**  
8 **you basically are prevented from winning, that would be**  
9 **very discouraging.**

10 **Right?**

11 A. I'm not aware of any of those environments where  
12 you are prevented from winning.

13 **Q. Well, what if the coach doesn't let you play?**

14 A. Does that mean like you're not a starter or ---  
15 is that what you're referring to?

16 **Q. Well, if you are just a bench warmer, would that**  
17 **be discouraging to some people?**

18 A. You know, this comes back to the climate. If a  
19 coach is saying you're an important part of this team  
20 which is one of the features of a task and caring  
21 climate, right, you're valuable, you push everybody,  
22 your opportunities are going to be coming. And what  
23 it's really about is let's do all we can to help you  
24 keep developing, right. If we are just like, hey,

1 A. Absolutely. A little excitement here in town.

2 **Q. Yes. So do sports have to be athletic to be**  
3 **sports?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: Do they have to be  
6 athletic?

7 BY ATTORNEY TRYON:

8 **Q. That is my question.**

9 A. Okay.

10 I think it just depends on how you define  
11 athletic.

12 **Q. Well that's what I'm wondering. So for example,**  
13 **are video games sports?**

14 A. You know, some universities are considering  
15 those. They have sports teams and they are considering  
16 that part of the athletics. It's not my particular area  
17 of interest.

18 **Q. Okay.**

19 **So some sports are solo and some are with**  
20 **teams.**

21 **Is that a fair statement?**

22 A. Yes and no. Again, I would say it is how you  
23 define it, right. If you are going to say a track team  
24 with the best individual, I would say there is relays

1 and it depends how the coach approaches it. Are we just  
2 a lot of individuals doing our thing out here, are we a  
3 team working together?

4 **Q. Well, when you --- so that may be in high school**  
5 **there is teams. But outside of high school or college**  
6 **there are sports you participate in that, for example, a**  
7 **marathon, you could be on a marathon and simply you're**  
8 **participating as an individual, right?**

9 A. Uh-huh (yes), I agree.

10 **Q. And but --- so some athletic events can be done**  
11 **without being on a team. Are there others that you can**  
12 **think of besides marathons?**

13 A. Sure. As people graduate and they can run  
14 races, yeah, they can participate in weightlifting.

15 **Q. And a lot of these things ---?**

16 A. They could have ---.

17 **Q. Sorry to interrupt you. Go ahead.**

18 A. I'm sorry. They could swim. I'm just throwing  
19 out another one.

20 **Q. Yeah. So swimming is both --- you do it as a**  
21 **sole --- as an individual but also as part of a team in**  
22 **high school and college, right?**

23 A. Right.

24 **Q. And both cases you, as an individual, want to**

1 are a team and we are working together to bring out the  
2 best in each one of us, but the goal is every athlete  
3 reach their potential.

4 **Q. But every one of those kids on a track team**  
5 **still wants to be the best on the track team as a**  
6 **general rule, right?**

7 A. I don't know that that is necessarily true, but  
8 I think they want to compete and they want to do well.  
9 I would agree with that.

10 **Q. I probably overstated that, but many of them ---**  
11 **at least some of them want to be the best on the team,**  
12 **the fastest on the team, right?**

13 A. Yes.

14 **Q. So those are the people that are comparing**  
15 **themselves to others and just want to be --- so they**  
16 **would be ego centered, ego oriented.**

17 **Is that right? But not necessarily?**

18 A. Yeah, not necessarily.

19 **Q. Okay.**

20 A. Do you want me to comment on it?

21 **Q. Sure.**

22 A. Okay.

23 If I could just use an example. Like a track  
24 athlete, Al Oerter was an athlete in the '50s and '60s,

1 **win in these sports but also you're trying to help your**  
2 **team win. Is that a fair statement?**

3 A. Yes, at its best.

4 **Q. And there is sometimes when you feel like**  
5 **running, it can be something you just like to run. You**  
6 **don't have to be on a team or you can compete, you just**  
7 **run on your own, right?**

8 A. That's true.

9 **Q. I see little kids, why walk when you can run.**  
10 **So that's something that you can do alone or you can do**  
11 **with your family, right?**

12 A. Uh-huh (yes).

13 **Q. Is that a yes?**

14 A. Yes, sorry.

15 **Q. Thanks. And it's something you can do either**  
16 **competitively or not competitively, right?**

17 A. Yes,

18 **Q. Now when you're on a team, for example, a track**  
19 **team, you're competing against other people on your**  
20 **team.**

21 **Is that right?**

22 A. Again, I would just say --- I would just check  
23 --- that is not how I would phrase it if I were a coach,  
24 that we're competing against each other. I would say we

1 he won four gold medals consecutively across four  
2 Olympics, it's crazy, throwing the discus. And he said  
3 --- a reporter asked him how did you beat the world, how  
4 were you so great, how were you better than everybody  
5 else these four Olympics, and he said --- his response  
6 was like that's nonsense. It is never about being  
7 better than somebody else. It's about being the best  
8 that you can be, right. And so what if is just good  
9 enough. What if I beat you, good, but maybe I can be so  
10 much better than that. So for my sights to be set on  
11 just being better than you it is limiting, right. And  
12 if you are so much better than me and so much less  
13 talented, why don't I just focus every day on being the  
14 best that I can be, right. So Al Oreter, you think four  
15 time Olympic gold medalist, he's got to be high on ego  
16 orientation. He's somebody who's really high in task  
17 and would have been lower. But we could look at other  
18 athletes that would be the flip and definitely. So when  
19 you say athletes who want to win that doesn't  
20 distinguish the task and ego aspect of it.

21 **Q. So task and ego orientation doesn't affect**  
22 **somebody's desire to win. Desire to win is separate**  
23 **from the ego versus task orientation, that's what you're**  
24 **saying, right?**

Page 90

1 A. I think it comes down more to what does winning  
2 mean.

3 **Q. All sports have rules, we've established that,**  
4 **right?**

5 A. Uh-huh (yes).

6 **Q. Is that a yes?**

7 A. Yes.

8 **Q. The purposes of the rules is, one, tells you how**  
9 **to play the game, right?**

10 A. Yes.

11 **Q. Another is for safety. You have rules for**  
12 **safety, is that right?**

13 A. Yes.

14 **Q. And you have rules to make things fair, right?**

15 A. Yes.

16 **Q. What other reasons do we have rules in sports?**  
17 **Does that cover it?**

18 A. Nothing else comes to mind right now.

19 **Q. Who generally makes rules for sports?**

20 A. The leagues and sports organizations per se.

21 **Q. Would it be fair to say that the participants**  
22 **rely on the rules?**

23 A. Rely on the rules?

24 **Q. Yes.**

Page 91

1 A. Fair to say that participants when they join a  
2 league or, you know, their understanding that there are  
3 rules that they need to abide by.

4 **Q. And they expect that others have to abide by**  
5 **those same rules; right?**

6 A. Yes.

7 **Q. And it is important to have consistent rules,**  
8 **rules that don't change periodically, right?**

9 A. I think rules change all the time in sports.

10 **Q. Why do they change?**

11 A. I think they change because they are recognizing  
12 those things that you mentioned that maybe something  
13 would be safer or something would be more fair or more  
14 inclusive.

15 **Q. And sometimes those changes are made in**  
16 **anticipation of problems, not waiting for problems to**  
17 **happen.**

18 **Is that fair?**

19 ATTORNEY VEROFF: Objection.

20 THE WITNESS: Yeah, I'm not sure.

21 BY ATTORNEY TRYON:

22 **Q. Okay.**

23 **What about safety, rules for safety, do**  
24 **sometimes safety rules anticipate problems and sometimes**

Page 92

1 **they react to problems that have already occurred?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: Yes.

4 BY ATTORNEY TRYON:

5 **Q. Is that a yes?**

6 A. Yes.

7 **Q. And then how about fairness, we have rules**  
8 **designed for fairness and those are sometimes set in**  
9 **motion because of something that has happened, right?**

10 A. Uh-huh (yes).

11 **Q. Yes?**

12 A. Yes.

13 **Q. And other times it's in anticipation of problems**  
14 **that we see might come down the road but we want to set**  
15 **rules for fairness, right?**

16 ATTORNEY VEROFF: Objection.

17 THE WITNESS: Yes.

18 BY ATTORNEY TRYON:

19 **Q. And in all sports there is scoring, right?**

20 A. Yes.

21 **Q. That is part of the rules, right?**

22 A. Uh-huh (yes), yes.

23 **Q. And those scores decide who wins, right?**

24 A. Yes.

Page 93

1 **Q. Would you say scoring is a motivator?**

2 A. For some athletes.

3 **Q. When an athlete perceives something as being**  
4 **unfair, that's a de-motivator, would you agree?**

5 ATTORNEY VEROFF: Objection.

6 THE WITNESS: In some cases.

7 BY ATTORNEY TRYON:

8 **Q. So sports also have rankings, individual**  
9 **rankings and team rankings, right?**

10 A. That's right.

11 **Q. And for some athletes those rankings are**  
12 **motivators, right?**

13 A. Yes, for some.

14 **Q. And sports, you give out trophies for winners,**  
15 **right?**

16 A. I'm sorry. You broke up.

17 **Q. In sports we give out --- at least in some cases**  
18 **we give out trophies to winners, right?**

19 A. In some cases.

20 **Q. So let me see if I understand. Are you**  
21 **advocating that sports should eliminate scoring?**

22 ATTORNEY VEROFF: Objection.

23 THE WITNESS: No.

24 BY ATTORNEY TRYON:

**Q. Are you advocating that they should eliminate rankings?**

A. I don't think it would hurt at lower levels. I don't think we need to have have a focus on that when you're five or six years old, on rankings, and we ought to be focused just on learning the game and having fun, but in general I'm not opposed to us having --- identifying winners and ranking teams and so on.

**Q. And sports teams, the coaches decide who plays in different positions in different games.**

**Is that right?**

A. That's right.

**Q. And should how good the student athlete is have anything to do with when, where and how to play according to the coach?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Should the athlete's talent have something to do with how much playing time they get?

BY ATTORNEY TRYON:

**Q. That would be a fair way to characterize my question, yes. What is your answer?**

A. I would agree with that particularly as we move up in levels. I really like the rules that some youth

**that winning competitions is one of the benefits.**

**Correct?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah. I think what I mean by that is if only --- if you have to win to have a great experience in sports, then half of our teams are not going to have a good experience, right. So what I'm suggesting here is that and as the data backs this up that if you are in a good climate, then you can go out there and have fun and try hard and maybe your team didn't end up with a winning record, but you can still reap the benefits. And so it is not the case that only winning teams reap these benefits that come along with sports.

BY ATTORNEY TRYON:

**Q. So you are saying winning is not a benefit?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I'm going to say winning can be a benefit. It's not a primary one in my mind in sport, but yes, winning can help us see our improvement and, you know, winning has its place for sure.

BY ATTORNEY TRYON:

**Q. And you see athletes when they win, they are pretty excited, aren't they?**

sport leagues have that we have eight-year-olds and we're not just going to say, hey, Julie, you're on the bench because you're not as good so you don't get any playing time. I like the rules that say everybody gets in there a few innings and gets some playing time or gets to bat, or whatever the sport might be. So I think it really varies on what sport we are talking about.

**Q. Let's look back at your report, Exhibit-2. Look at paragraph 35. Do you see that?**

A. Yes, I do.

**Q. The first sentence says, thus the benefits associated with youth and young adult sport are not limited to whether athletes are winning competitions, where they are ranked in their sport or what level of publicity they are getting.**

**Do you see that?**

A. Yes.

**Q. So you would agree with me that one of the benefits is the opportunity to win competitions.**

**Right?**

A. I would probably word it one of the benefits is the opportunity to compete.

**Q. Well, here you say winning. You say it is not limited to whether athletes are winning, which suggests**

A. Many of them are.

**Q. Well, have you ever seen anybody disappointed about winning?**

A. Maybe not disappointed, but if --- let's just say you are really skilled in tennis and you come and you know, you leave me behind, you beat me 6061, there might not be a lot of joy for you in beating me, right, but for some athletes it might be, hey, it's another win for me and I'm super excited about that. So that is what I mean.

**Q. And where they're ranked in their sport, that is one of the benefits.**

**Right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, I think we may have a different view on benefits. With benefits I'm just thinking what's going to help us long term. And it reminds me of this Olympic gold medalist who said her kid was going through kind of a junk drawer and found her gold medal, right. So winning --- she's a gold medalist, didn't mean as much as all the experience and just reflecting on the ability to give your best effort and to build these relationships and to push yourself so hard. Those seem like benefits more than, you know, the

Page 98

1 trophy or something winning. I'm not disputing that  
2 winning, yeah, can be fun and it is definitely part of  
3 sport.

4 BY ATTORNEY TRYON:

5 **Q. Yeah. And so all those things you just**  
6 **mentioned certainly are benefits to sports. I'm not**  
7 **trying to suggest that's not the case. I just want to**  
8 **understand when you say in this paragraph, thus benefits**  
9 **associated with youth and young adult sports are not**  
10 **limited to whether athletes are winning competitions,**  
11 **where they are ranked in their sport or what level of**  
12 **publicity they are getting, it's not limited to that,**  
13 **but it does include those three things, right?**

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: I'm going to give you that  
16 those are benefits. I'm just going to put them down  
17 lower on what we value.

18 BY ATTORNEY TRYON:

19 **Q. Okay.**

20 A. Or more important benefits.

21 **Q. Is the opportunity to get a college scholarship**  
22 **also a benefit in youth sports?**

23 A. For a very small proportion of children in youth  
24 --- in our youth sport world are able to secure college

Page 99

1 scholarships and go on, and so our youth sport world  
2 shouldn't be centered around that I believe.

3 **Q. But for those that want to and can get college**  
4 **scholarships, that is a big benefit for them, right?**

5 A. Yes, that's very cool.

6 **Q. And it can be worth tens of thousands of**  
7 **dollars, right?**

8 A. Yes, it can.

9 **Q. And even just being recruited to play on a**  
10 **college team, that's a big benefit for high schoolers,**  
11 **right?**

12 A. Yes, for some.

13 **Q. Well, right, for some. And in order to get**  
14 **there you need to be able to --- have the opportunity to**  
15 **--- well, strike that.**

16 **And for obviously a smaller minority still the**  
17 **opportunity to ultimately go on and play professional**  
18 **sports, that is another benefit, right?**

19 A. Yeah, it's a benefit for such a small proportion  
20 that, again, I would just say that's not how we should  
21 set up our sports world, for those few.

22 **Q. I understand that, but nonetheless there are**  
23 **many who never get to that place, but that's what they**  
24 **strive for and that's one of the reasons why they are in**

Page 100

1 **sports, right?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: I think there could be  
4 people like that for sure.

5 BY ATTORNEY TRYON:

6 **Q. And same thing with scholarships, there are a**  
7 **lot of kids that want to get scholarships, they may not**  
8 **get them, but they're in sports because they want to get**  
9 **that scholarship and they think they'll be able to.**  
10 **Fair statement?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: Yeah, I'm not sure what the  
13 percentages are. There are probably a lot more who  
14 would like to have a college scholarship who don't  
15 receive them because of the small proportion who do,  
16 right. But definitely. That's called extrinsic  
17 motivation. If I'm just playing a sport because that's  
18 the --- that's what I'm going for is a scholarship,  
19 yeah, there could definitely be athletes focused along  
20 those lines.

21 BY ATTORNEY TRYON:

22 **Q. And would you agree that colleges generally**  
23 **select scholarship athletes from the pool of people that**  
24 **are actually playing high school athletics? That is a**

Page 101

1 **correct statement, right?**

2 A. I would say the majority have played high school  
3 athletics, yes.

4 **Q. And those that are seeking that scholarship are**  
5 **athletes who use their high school performance to**  
6 **compete for college scholarships, right?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: Yes, probably many do.

9 BY ATTORNEY TRYON:

10 **Q. And the market for athletic scholarships is, in**  
11 **fact, competitive, right?**

12 A. Many schools it is. Definitely not all schools,  
13 though.

14 **Q. Okay.**

15 **What would it be otherwise?**

16 A. I think some of the --- some smaller schools  
17 just will --- we have a local college that will give  
18 students like \$8,000 or \$10,000 a year towards their  
19 tuition fees if they participate on a sport team. And  
20 of course, you know, there has to be some level of skill  
21 there, but I wouldn't --- it is a good place for people  
22 who want to continue to play a sport but may not have  
23 the highest skill levels and definitely aren't being  
24 recruited at the division --- for the most part, a

Page 102

1 Division I level or something like that.

2 **Q. But they still compete for that scholarship,**  
3 **fair enough?**

4 A. Yes.

5 ATTORNEY VEROFF: We've been going for a  
6 little over an hour. I just wanted to check in see,  
7 David, if you have a sense of when you are wrapping up  
8 this module. Maybe it would be a good time to take a  
9 break.

10 ATTORNEY TRYON: Yes, give me another  
11 five minutes and we can break if anybody wants to.

12 ATTORNEY VEROFF: Great.

13 ATTORNEY TRYON: Well, we can break right  
14 now. I'll leave it up to the witness. I'm not going to  
15 force it upon the witness or Plaintiff's Counsel. Would  
16 you like a short break?

17 THE WITNESS: That would be great. Thank  
18 you.

19 ATTORNEY TRYON: Let's go back how about  
20 20 till. Does that work?

21 VIDEOGRAPHER: Going off the record. The  
22 current time reads 12:32:00 p.m. Eastern Standard Time.

23 OFF VIDEOTAPE

24 ---

Page 103

1 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

2 ---

3 ON VIDEOTAPE

4 VIDEOGRAPHER: We are back on the record.  
5 The current time reads 12:41 Eastern Standard Time.

6 BY ATTORNEY TRYON:

7 **Q. So let me then ask you, Professor Fry, have you**  
8 **heard of the International View for Sociology of Sport?**

9 A. That journal?

10 **Q. Yes.**

11 A. Yes, I've heard of it.

12 **Q. Okay.**

13 **Are you familiar with Warren Whisenant?**

14 A. No.

15 **Q. Okay.**

16 **How about Jeremy S. Jordan?**

17 A. No.

18 **Q. Okay. Fair enough. Let me show you Exhibit ---**  
19 **if we could mark this, I guess we're at Exhibit 6,**  
20 **Fairness and Enjoyment in School Sponsored Youth Sports.**  
21 **If you could bring that up, Jacob.**

22 ---

23 (Whereupon, Exhibit 6, Fairness and  
24 Enjoyment in School Sponsored Youth

Page 104

1 **Sports, was marked for identification.)**

2 ---

3 ATTORNEY TRYON: Jacob, if you could just  
4 put --- I think we've done this before. Put this in a  
5 PDF in the chat box, can you do that?

6 VIDEOGRAPHER: Yes, I just have to do  
7 that while it is not being shared and then I can share  
8 it again.

9 ATTORNEY TRYON: Okay.

10 Well I think we can just share it for now  
11 and then we can put it in there. If not, then if we  
12 need to, we can do it.

13 VIDEOGRAPHER: Okay.

14 I mean, I already have it dragged in.

15 ATTORNEY TRYON: Great. It doesn't take  
16 long at all. Great.

17 BY ATTORNEY TRYON:

18 **Q. So have you ever seen this article before?**

19 A. I haven't. Can you enlarge it a little bit?  
20 And what year was this at the top?

21 **Q. It looks like 2008.**

22 A. Thank you.

23 ATTORNEY VEROFF: If you give the witness  
24 a minute if she wants to scroll and get a sense of what

Page 105

1 this is.

2 BY ATTORNEY TRYON:

3 **Q. Well, before I ask you any questions about this**  
4 **let me just ask you some questions overall. Would you**  
5 **agree that fairness in sports is an important value?**

6 A. Yes.

7 ATTORNEY VEROFF: Objection.

8 BY ATTORNEY TRYON:

9 **Q. And have you done any research on the issue of**  
10 **fairness and sports?**

11 A. No. I'm just hesitating because we have  
12 included measures of sportspersonship, being a good  
13 sport. So if you include that then, yes. But in  
14 general, just fairness, I would say no.

15 **Q. Okay.**

16 **Have you read any papers that specifically**  
17 **focus on fairness in sports?**

18 A. You know, probably, but I couldn't name them.

19 **Q. Okay.**

20 **Let's go down to --- I really only have one**  
21 **question here, which we'll look at and then if you want**  
22 **to review more of the article you are certainly welcome**  
23 **to do that. But if you go to what is labeled as page 97**  
24 **at the top.**

Page 106

1 A. Could I just read the abstract first? Do you  
2 mind?

3 **Q. Yes.**

4 VIDEOGRAPHER: If you need that made  
5 bigger, let me know.

6 THE WITNESS: Maybe one more notch up.  
7 Thank you.

8 VIDEOGRAPHER: You're welcome.

9 THE WITNESS: Okay.

10 BY ATTORNEY TRYON:

11 **Q. If you turn to 97, and the third full paragraph**  
12 **on that page it says an organizational climate embracing**  
13 **fairness is a critical factor influencing student**  
14 **athletes' attitude towards the sport they participate in**  
15 **and their desire to continue participation. Do you**  
16 **agree with that statement?**

17 ATTORNEY VEROFF: I will just remind the  
18 witness if she would find it helpful to read more  
19 context around that statement before you answer, you're  
20 welcome to do so.

21 THE WITNESS: Yes, I think it would be  
22 helpful to look at how they measure fairness and, you  
23 know, the methods used in the study, but in general I  
24 can imagine that, yeah, that this is true.

Page 108

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: Yes.

3 BY ATTORNEY TRYON:

4 **Q. You have not attempted to do that balancing in**  
5 **connection with HB-3293, have you?**

6 ATTORNEY VEROFF: Objection.

7 THE WITNESS: Yeah, I think my expertise  
8 is to weigh in on all the benefits that athletes would  
9 not have an opportunity to reap if they weren't able to  
10 participate. But I think there are people who know a  
11 whole lot more more with any sport about how to keep  
12 making the rules fair for everyone.

13 BY ATTORNEY TRYON:

14 **Q. Okay.**

15 **But just to be clear you have not attempted to**  
16 **do that balancing with HB-3293?**

17 ATTORNEY VEROFF: Objection.

18 THE WITNESS: I'm not sure I understand  
19 the question.

20 BY ATTORNEY TRYON:

21 **Q. Okay.**

22 **Let me try again. We established that fairness**  
23 **depends on balancing a lot of interests and views of**  
24 **different groups, different people, right?**

Page 107

1 BY ATTORNEY TRYON:

2 **Q. Okay.**

3 **You don't --- just as a general statement you**  
4 **don't disagree with it?**

5 A. Right.

6 **Q. So I'm not going to ask you about any of their**  
7 **results or anything else, I just wanted to get your**  
8 **reaction on that statement. And you are not offering**  
9 **any expert opinion on fairness in sports.**

10 **Right?**

11 A. That's right.

12 **Q. Are you offering an expert opinion on whether or**  
13 **not HB-3293 is fair?**

14 A. I'm --- I believe that the sport organizations  
15 at every level really value being inclusive and it would  
16 be harmful to exclude athletes where they wouldn't have  
17 an opportunity to reap the benefits of sport.

18 **Q. And there are a lot of things that go into**  
19 **fairness, right?**

20 ATTORNEY VEROFF: Objection.

21 THE WITNESS: Yes.

22 BY ATTORNEY TRYON:

23 **Q. And it requires balancing of interests of**  
24 **various people and groups and values; right?**

Page 109

1 A. Yes.

2 ATTORNEY VEROFF: Objection.

3 BY ATTORNEY TRYON:

4 **Q. And that balancing, you have not attempted to do**  
5 **with respect to 32 --- HB-3293.**

6 **Correct?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: I think it would be unfair  
9 to categorically exclude a group of athletes from having  
10 the opportunity to participate. So I'm not sure if that  
11 --- if you interpret that as balancing or not balancing.

12 BY ATTORNEY TRYON:

13 **Q. Have you balanced the interests --- have you**  
14 **looked at the interests of other people in that decision**  
15 **that went into 32, HB-3293?**

16 ATTORNEY VEROFF: Objection.

17 THE WITNESS: Yes, I think this House  
18 Bill is not fair to transfemale athletes.

19 BY ATTORNEY TRYON:

20 **Q. Okay.**

21 **We will move onto that in little bit then.**

22 **What is your qualifications to determine fairness?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: I think I was called to be

Page 110

an expert witness in this case to speak to the many benefits that come from participating in sports. And so from my experience as an athlete and a coach and a scholar in this area I think I have, you know, insight and can speak to the many benefits and how we should do all we can to prevent --- or all we can to not exclude athletes from having the opportunity to participate.

BY ATTORNEY TRYON:

**Q. You said you are a tennis player, right?**

A. Yes.

**Q. When is the last time you played tennis?**

A. I --- there's a wall right outside my office, and so I hit on a backboard. I haven't played a match in a little while. I'm not sure the last time was.

**Q. And when you played --- the most recent time you played competitively, was that in a league or how does that work?**

A. I haven't played leagues in a while. It was just for fun. I'd play with a couple of my friends, when we go to conferences, we bring our racquets and we get together and play. I've moved into, you know, other exercise forms now and I swim and hike and so on.

**Q. And so when you were playing tennis, team, is that what it was, on a team?**

Page 112

**was fair, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Well, I'm assuming you mean transfemales playing and ---?

BY ATTORNEY TRYON:

**Q. I do not mean that. I meant exactly what I said. If you go to compete against another team and that team says we have two men, biological men, and they are going to compete against you, you would have said that is not fair, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I would have said --- sorry.

ATTORNEY VEROFF: That is all right.

THE WITNESS: I think I would have said what are the rules, right. And if the rules are that somebody could play, then I would say bring them on, right. And if the rules are that they can't play, then I'd say, yeah, we probably shouldn't do it that way until the rules change, right.

BY ATTORNEY TRYON:

**Q. So whatever the rules are by definition are fair, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: No, I didn't say that. I'm

Page 111

A. Uh-huh (yes), yes.

**Q. What team was that?**

A. I played USTA leagues. Those are for adults. And after college, you know, there is just like a circuit in Texas that you can sign up for tournaments all around the State and play and go for ranking.

**Q. But in college you played, right?**

A. Yes.

**Q. And was that on a girls team or a mixed team or what? I don't know much about tennis so I'm just trying to understand that.**

A. Okay.

There was a men's and women's team. We had a head coach for both and assistant. Maybe in the last year there were separate head coaches, but we worked out together. We traveled to tournaments together. When you add up the score you got to --- you got to --- the women had a score and the men had a score, so it wasn't a total team win like that.

**Q. Okay.**

**So if you're on the women's team and you go up against some other team and they just said we're going to have boys, we're going to have men participate in the women's team against you, you wouldn't have thought that**

Page 113

sorry, Julie.

ATTORNEY VEROFF: No, that's quite all right.

THE WITNESS: I didn't say the rules are always fair, but I think we have to start somewhere and we have to acknowledge them and respect them.

BY ATTORNEY TRYON:

**Q. Well, if they said we are going to have these men compete against you and they just changed the rules on you, wouldn't you object to the rules being changed?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah. You know, in the context of what is taking place that seems not like a very realistic example in my mind. So I'm not sure I'm thinking about it.

BY ATTORNEY TRYON:

**Q. So you don't want to answer my question?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, I think it's --- I think what we are talking about is just more complicated, right, and it is not just --- if we are talking about transfemale athletes, I think we are talking about a different ball game than you are.

BY ATTORNEY TRYON:

Page 114

1 **Q. Yeah. Well, I was not talking about them, at**  
 2 **least not yet. I'm just asking if suddenly men are**  
 3 **allowed to compete against women in tennis, whether or**  
 4 **not they identify as female, do you think that would be**  
 5 **fair to the women?**

6 ATTORNEY VEROFF: Objection.

7 THE WITNESS: Again, I would just go back  
 8 to the rules. But just in general, that if I decide  
 9 today, hey, I will go --- we have a really weak men's  
 10 tennis team, so today I think I'll go play on the males  
 11 tennis team, yeah, I don't think that would be right,  
 12 right, that I could switchover to win. Right. The  
 13 point is can people be their genuine, authenticate self  
 14 and play with a gender identity that they have.

15 BY ATTORNEY TRYON:

16 **Q. So I mean you're answering your own question**  
 17 **your own way, but so that's fine, but you have also said**  
 18 **that you think HB-3293, which sets a rule, you think**  
 19 **that rule is unfair, right?**

20 A. Yes, I do.

21 ATTORNEY VEROFF: Objection.

22 BY ATTORNEY TRYON:

23 **Q. But the legislature balanced a lot of different**  
 24 **interests in making that rule, right?**

Page 116

1 being inclusive and let's do all we can to, you know,  
 2 balance these things and make things fair but also being  
 3 inclusive and not totally excluding a group of athletes.  
 4 BY ATTORNEY TRYON:

5 **Q. So what would be the rule that you would set up**  
 6 **for high school for transgender people --- let me**  
 7 **rephrase that. What would be the rule that you would**  
 8 **set up in high school sports for a male who expresses**  
 9 **that he is now identifying as female should be allowed**  
 10 **to participate in girls sports?**

11 ATTORNEY VEROFF: Objection. Go ahead.

12 THE WITNESS: Yeah, I think we should  
 13 rely on the experts and the medical doctors and the  
 14 exercise physiologists who really study this and can  
 15 say, hey, across these sports this is --- seems to  
 16 create a fair playing ground. I think, you know, it  
 17 sounds like our local weatherman, we have incoming data,  
 18 right, but this is relatively new in the sport world and  
 19 I think all of these researchers are gathering more data  
 20 all the time that is going to help inform these  
 21 decisions moving forward on how we create it. So you  
 22 know, I'm not an expert to say, hey, what would those  
 23 exact guidelines be, but just to have a blanket  
 24 exclusion of all we set the stakes to do a lot of harm,

Page 115

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: I don't know. I don't know  
 3 that that is true.  
 4 BY ATTORNEY TRYON:

5 **Q. You don't know one way or the other what**  
 6 **interests they balanced, right?**

7 A. I don't know what their ---.

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: --- I don't know what their  
 10 knowledge base is or their real involvement. I don't  
 11 know if they've taken a close look. It looks like in  
 12 this situation, that PBJ (sic), that people close to it  
 13 are saying, hey, let's let this child play, right, and,  
 14 you know, the world is not going to end and kids can  
 15 have good experiences and we can --- we can go. So  
 16 yeah, I can't speak to what the legislators have --- the  
 17 background they've done or their mindset.

18 BY ATTORNEY TRYON:

19 **Q. Do you think that the legislation, this**  
 20 **legislation should be tailored to each individual?**

21 ATTORNEY VEROFF: Objection.

22 THE WITNESS: No, no. I think the sport  
 23 organizations at every level, from the Olympic Committee  
 24 to the NCAA, all of them are saying we really value

Page 117

1 and BPJ would be a recipient of that harm in my opinion.  
 2 BY ATTORNEY TRYON:

3 **Q. So we should rely on experts about safety for**  
 4 **one thing, right?**

5 ATTORNEY VEROFF: Objection.

6 THE WITNESS: Yes.

7 BY ATTORNEY TRYON:

8 **Q. And we should also rely upon experts in**  
 9 **performance, right?**

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: Yes.

12 BY ATTORNEY TRYON:

13 **Q. So you keep focusing on BPJ, so if we are going**  
 14 **to focus on each individual, we have to have in each**  
 15 **sport an example of someone who is a male identifying as**  
 16 **a female has to be individually evaluated to determine**  
 17 **whether that person should be allowed to participate in**  
 18 **whatever sport that person wants to be in?**

19 ATTORNEY VEROFF: Objection.

20 THE WITNESS: No, I didn't say that. And  
 21 it may be just we could have general guidelines at the  
 22 high school level. I'm just saying I'm not --- that is  
 23 not my expertise as on the performance and exercise  
 24 physiology of it all to think what would be fair. I

Page 118

1 think as we branch up and get to more elite levels, then  
2 that seems to be the direction that NCAA is going, that,  
3 hey, let's pull in these national governing bodies  
4 across the sport because they know the sport the best  
5 and are in the best position to maybe offer those  
6 guidelines.

7 BY ATTORNEY TRYON:

8 **Q. Do you have an opinion about other --- well, we**  
9 **will get to that later. Let's go back to your report**  
10 **and if we could go to after paragraph 17. Well, that**  
11 **doesn't seem right. There we go. Okay. The title of**  
12 **this section on top of page five it says Focusing Solely**  
13 **on Performance Outcomes Undermines the Benefits of Sport**  
14 **for Youth and Young Adult Athletes. Do you see that?**

15 A. Yes.

16 **Q. Are you aware of any middle schools, elementary**  
17 **schools or high schools that focus primarily on**  
18 **outcomes?**

19 ATTORNEY VEROFF: Objection.

20 THE WITNESS: No.

21 BY ATTORNEY TRYON:

22 **Q. Are you aware of any surveys or studies of**  
23 **middle schools or high schools that find out if there**  
24 **are any schools that focus solely on performance**

Page 120

1 winning only, I'm not sure. I think there are probably  
2 coaches out there that are.

3 **Q. Sorry. Go ahead.**

4 A. Yeah, probably most, you know, it's not a  
5 100 percent, but when we say primary that that's what's  
6 really driving the boat for them. I think there are  
7 coaches out there.

8 **Q. Well, you didn't say primary. You said solely.**  
9 **Those are your words, right?**

10 A. Right.

11 ATTORNEY VEROFF: Objection.

12 BY ATTORNEY TRYON:

13 **Q. Do you now want to modify that in your opinion?**

14 ATTORNEY VEROFF: I'm sorry, objection.

15 THE WITNESS: Sorry. I'm just going back  
16 to this wording that you're talking about. Are you  
17 saying ---?

18 BY ATTORNEY TRYON:

19 **Q. At the heading. Right about paragraph 18.**

20 A. Sorry. I was looking underneath. Yeah, I mean  
21 it in the sense that that seems to be what all the  
22 discussion is about, that all were focused on just this  
23 isn't fair in terms of performance, and I'm saying that  
24 is missing a bigger picture of what youth sport can be.

Page 119

1 **outcomes?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: I would just say that it

4 depends what we mean by solely focus on performance  
5 outcomes. I think there are coaches out there that  
6 absolutely that is their primary thing and they care  
7 less about the holistic, you know, wellness and just  
8 the overall experience of their kids and they are just  
9 trying to put the team together that is going to give  
10 them the best chance to win.

11 BY ATTORNEY TRYON:

12 **Q. What coaches are you aware of in high school**  
13 **that do that?**

14 A. Just in my experience across years. I see --- I  
15 see coaches that are very focused on winning that use a  
16 lot of punishment for mistakes and that seems to be what  
17 drives them.

18 **Q. And so you believe there are coaches out there**  
19 **that focus solely on performance outcomes for youth and**  
20 **young adult athletes?**

21 A. Yes, it just seems like a weird way to talk  
22 about it, that I'm not sure when --- I mean to put a  
23 percentage, if you're asking that, so are there coaches  
24 that 100 percent they're just focused on winning and

Page 121

1 **Q. What discussion is that? You said that**  
2 **discussions all about it. What discussions are you**  
3 **talking about?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: The idea that it's not fair  
6 for transathletes to participate, right. And the only  
7 reason that we have any concern about this is from the  
8 performance issue. So in this case, I'm just saying if  
9 we think about BPJ and her being excluded from having  
10 the opportunity to play a sport, there's a lot at stake  
11 there as well as the other side is saying, hey, is this  
12 fair in terms of performance for athletes, right. That  
13 is what I meant by this.

14 BY ATTORNEY TRYON:

15 **Q. So who is --- but you're not aware of any**  
16 **schools or colleges that have a policy of focusing**  
17 **solely on performance outcomes, right?**

18 A. Right.

19 **Q. But you think the statute, HB-3293 solely**  
20 **focuses on performance outcomes?**

21 ATTORNEY VEROFF: Objection.

22 THE WITNESS: I'm not sure what leads me  
23 to say that, but I think the statute excludes a group of  
24 athletes and that that would be unfortunate that they

Page 122

wouldn't have a chance to just reap these benefits that can come from being a sports team.

BY ATTORNEY TRYON:

**Q. So you are not saying that you believe that HB-3293 focuses solely on performance outcomes, right?**

A. Okay. I'm not saying that. I think performance outcomes is --- seems to be a piece in it.

**Q. Is that an appropriate piece to consider?**

ATTORNEY VEROFF: Objection.

BY ATTORNEY TRYON:

**Q. Let me rephrase that. Is performance outcomes something that's an appropriate thing for a legislature or a school to focus on?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes.

BY ATTORNEY TRYON:

**Q. Now, in paragraph 18 itself, you say, the second sentence, a myopic focus on winning in youth and young adult athletes ignore the other important benefits that school athletics offers young athletes such as teamwork and camaraderie which all advance when all athletes have the opportunity to play the sports they love and reap the benefits of such participation. Do you see that?**

A. Yes.

Page 123

**Q. When you say a myopic focus, you're not excluding an appropriate level of focus on winning. Right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: That's right.

BY ATTORNEY TRYON:

**Q. Is there a reasonable variance of opinions in the sporting world --- sports world on what exactly the proper focus on winning ought to be versus the other benefits?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes, I think there is an agreement within our field of sport exercise psychology that at the youth sport level the focus should be on giving as many kids as possible a chance to participate in youth support, right. And then as athletes move up the levels, that there is more emphasis and importance placed on winning.

BY ATTORNEY TRYON:

**Q. What do you mean by that, as athletes move up the levels?**

A. That typically there's a greater focus in high school than middle school, greater focus in middle school than elementary school, not that they have

Page 124

organized sports within their schools, but just compare that to Little League, that as you move up to college, the emphasis on winning may increase and so on.

**Q. Thank you. Would you agree with me that there is nothing in HB-3293 that says there should be a sole or myopic focus on winning in any of the sports it covers?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes, I would agree.

BY ATTORNEY TRYON:

**Q. And the law doesn't say anything anywhere that there are not other benefits to sports other than winning. Right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Right.

ATTORNEY VEROFF: I think if we are going to have any questions about what the law says we should put it back up on the screen.

ATTORNEY TRYON: I don't have any more questions on that.

ATTORNEY VEROFF: Thank you.

BY ATTORNEY TRYON:

**Q. Let's look at paragraph 21 in your report. You say there are many benefits to young people from**

Page 125

**participating in athletic activities discussed further herein. Do you see that?**

A. Yes.

**Q. Is it possible that some young people are actually harmed by participation in athletic activities?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes, I think so.

BY ATTORNEY TRYON:

**Q. What are some of those possible harms?**

A. Some of those harms might be they have abusive coaches that push them too hard physically, that you know, don't treat them in a developmentally appropriate way, that there --- coaches allow like bullying to go on, that kids are made to feel shame if they don't perform well. Those kind of things.

**Q. Outside the coaching, you mentioned bullying. So in sports that happens, right, some athletes bully other athletes, right?**

A. It happens sometimes.

**Q. And that can have long-term lasting negative impacts, right?**

A. Yes.

**Q. Are you aware that sometimes those who are athletes also belittle those who are not?**

A. Yes, I'm aware of that.

**Q. Let's move onto paragraph number 23. In paragraph 23 you talked about achievement goal perspective theory, right?**

A. Yes.

**Q. Does this theory apply to outside sports, say for example, to academics?**

A. Yes, John Nicholls actually started there in classroom research.

**Q. So goal perspective theory is about goals, right?**

A. Yes.

**Q. And how to set goals and how to reach goals?**

A. Not exactly. I would use sort of another area of goal setting, but goal perspective theory is more about what is our --- how do we define success and how are we kind of valuing what is important in life. Some people think of goal perspective is how we set goals, right, that they need to be specific measurable. That is sort of another part of the literature. And instead, Nicholls is just thinking how to understand people's perspective on what they are trying to get out of things, right. And if you have this task goal perspectives that you are moving through life thinking

apologize for missing that.

**Q. Your dissertation?**

A. Yes, I did a --- this was my line of work.

Early in my career I did a series of three studies kind of tapping into those, how children gain an understanding of the concepts of effort, luck and ability.

**Q. They gain an understanding of concepts of effort, of luck and ability. Is that what you said?**

A. Yes.

**Q. What does that mean, luck and ability?**

A. So when kids are really little those --- they don't clearly distinguish these. So they just think, hey, whoever tries hardest, they are going to do the best, right, and they don't recognize ability in the same way that we do as we mature over time and that we understand, hey, gosh, you could run circles around me today, you were a much better, faster or stronger runner than I am, for example, right. And that doesn't mean that I can't try harder to improve but our ability levels are really different today.

So in these studies we set up scenarios and we show kids, and so there's kind of a contrast. Somebody didn't try hard at all actually outperformed somebody

how can I just give it my best and be the best that I can be. And if you are moving through life with an ego perspective, you are thinking, hey, how can I demonstrate my competent --- my competence and show other people I'm better.

**Q. And that happens in all aspects of life, right, not just in academics?**

A. Yes, it's a pretty relevant theory.

**Q. You probably see it in faculty lounges and college boards and you will certainly see it lots of places in academia, right?**

A. Right, academia from I'm guessing law firms and probably everywhere we go in the world.

**Q. You bet. Absolutely you see it in law firms and pretty much every place, I agree with you.**

Let me look at paragraph 24 with you. You say first is the developmental component of achievement goal perspective theory. Young children are incapable of accurately comparing their ability to others, overestimate their ability and are naturally focused on their effort as a marker of success. So I'm not saying that's wrong, but I don't see a source for that. Do you have a source for that statement?

A. I do. Nicholls 1989 and my dissertation. I

who seems to be focused and concentrating, and we say, you know, what do we think is happening here. And so these concepts are just really blurred and kids are saying yeah, you know, this person is definitely trying harder. I don't know why they didn't perform very well. This person looks like they are not trying hard. But if they both do it again and they try hard then I think they will get the same score. So just this wide variety of scenarios. Kids don't distinguish like luck and ability. So you know, if you're around little kids, you know, they like games like Chutes and Ladders or Candyland. Those are a hundred percent luck games, right. There's no ---.

**Q. Now I understand. I thought you said luck, L-O-C-K. You are saying luck, L-U-C-K?**

A. Right, right.

**Q. Thank you. I didn't mean to have you go on with that long explanation when I just misunderstood your one word. But thank you for that explanation. That helps me understand what you're saying here.**

So my --- then I'm just interested in what is it that at some point little kids somehow realize that they have overestimated their ability, is that something that just naturally happens or is it something that other

**people have to point out for them for them to realize it, whether it be teachers or coaches or just the kids around them?**

A. Okay.

So just a quick example. Nicholls would put a list of faces, you know, like generic smiley faces 1 to 30 and you go in with a class of five-year-olds and you interview them one at a time. And you say, okay, this is everybody in your class and they are listed by how good a reader they are, right. And so this person is the very best in your class, right, this person is just the worst reader, this person is the middle. Which one is you? And the mean for kids in kindergarten is like three, which tells us they're all saying well, that's me up there, high, right, I'm the best reader in the class. But as you move through those elementary school years, the mean shifts to like 15 by the time they're say in sixth grade, because when you ask six graders, all right, here's everybody in your class, where do you fit in, they are much more accurate. And when they ask the teachers, there's no correlation, right, with younger kids, because they are all over the place. But by the time you get to the upper elementary grades it correlates highly with what the teachers are saying in

issue within education is not that kids are overestimating but they're --- you know, don't have as high self-esteem or confidence and those type of things. But are there people out there that could be overestimating? Absolutely.

BY ATTORNEY TRYON:

**Q. So Nicholls did the study of academic. Did he do any study athletically?**

A. That's where I picked it up and looked in the physical domain and made scenario specific to physical activity and conducted these three studies that looked at effort and luck and ability with kids aged 5 to 12 and sort of replicated his work, and we found that kids move through these same levels of understanding in the physical domain where things are a little bit more obvious for us to see, right. If we're sitting here working on math problems we not be able --- it might not be as evident that, hey, somebody is moving through these and they are stronger, right. But in the physical domain, when we see each other and move and we can see each other's skill levels, in some of these things move a tiny bit faster but it was the same sort of stages of development, if you will.

**Q. Is your dissertation cited in your bibliography?**

terms of the kids' reading ability. And Nicholls said this is so key because it makes Middle School a very key developmental period as kids are gaining this understanding all of a sudden now there is a reason to try your hardest or withdraw effort because you don't want to look silly. You know that other people might be more skilled than you. And that's why he was so passionate about this theory. Even though we are capable of looking at the world that way, we all can choose to just stay focused on our effort and ability and being the best that we can be.

**Q. So there are people that --- sorry.**

A. That is the other piece of the climate, how do we train teachers and coaches to create that environment. That tells people keep that task involvement going.

**Q. And there are people that continue to overestimate their abilities throughout life, right?**

A. Yes.

**Q. And that is exacerbated if those people are never corrected to let them know in some way that their abilities are not what they think they are, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, I'd say our bigger

A. No, it is not.

**Q. Is it in your list of publications?**

A. It's in my Vitae.

**Q. You have a lot of publications. Can you direct me to it?**

A. You're going to go back a ways. Okay. So the dissertation study is on 1997, it's on page six. Fry and Duda.

**Q. I see Fry and Duda, 1997.**

A. Yes, those are my dissertation studies. And I followed it up with two studies at the top of that page, Fry 2000. There are two different studies.

**Q. Okay.**

Let me move on to paragraph 25 of your report. I just goofed on my --- there we go. I lost all the pictures, so I couldn't see you anymore. Just one of the hazards of technology. Okay. So I'm looking at paragraph 25 and you talk about task. Here you talk about goal --- primary goal orientations are task and ego orientation, right?

A. Yes.

**Q. So you're not saying --- I think you've said this before, but I just want to make sure I understand. You're not saying that ego orientation is bad from an**

**individual basis, are you? It just kind of sounds like it's a pejorative. You don't mean it that way, do you?**

A. I think it depends on what your aim is and if you have --- if you want athletes to have fun and try hard and have good relationships and, you know, feel good about themselves, have confidence, have empathy for others, things like that, then it's not something we would want to promote is the orientation because across a wide body of literature those just don't lead to what we call adaptive outcomes, right.

On the other hand, many elite athletes are high in task and ego orientation, right. And the big deal here is that people really need that high task orientation to sustain motivation over time with the ups and downs and overcoming injuries, with all of that, but ego orientation isn't necessarily a bad thing in this case. But it probably isn't great if you don't have that high task orientation to go with it.

**Q. So let's move on to paragraph 26. Okay. So in the last sentence, I think it is the next to last sentence. Okay. The sentence that starts when the environment created by coaches and others is a caring environment, do you see that part?**

A. Yes.

**Q. It continues, athletes are more likely to perceive the overall climate as task-involving. A caring environment is one where athletes feel safe, welcome, comfortable and valued and are treated with kindness and respect by all in the sports setting. You wrote that, right?**

A. Yes.

**Q. And that means a caring environment for all athletes, right?**

A. Yes.

**Q. And a caring environment also requires rules?**

A. Yes.

**Q. A caring environment still includes the coach --- let me rephrase that. A caring environment still includes the coach and officials and requires them to make calls that make --- that some athletes don't like and may even get upset, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Right.

BY ATTORNEY TRYON:

**Q. So how do you square that with a caring environment when the rules are going to make some athletes unhappy?**

A. So this is about coaches kind of saying, yes, I

want to be intentional and I want to do everything I can to create this environment that is going to help bring out the best in my athletes, right, and I don't have total control over what my athletes perceive. I'm just going to do what I can to promote these features that are in the last sentence. I'm also going to get athletes, trying to get them to buy in so that they see how valuable this is if we create this caring task-involving climate. It doesn't in any way mean, you know, we're not going to get a bad call or things aren't going to happen, things don't go our way, somebody starts before I do. Right. All kinds of things. Those are just part of sports, right, but this refers to the coaches buying into this truckload of research that we have that shows how we can help all athletes have a good experience.

**Q. You're not advocating for laws requiring a task oriented environment, are you?**

A. No. That would be tempting. No. We're just saying if our goal is to help athletes reach their potential, then we have a lot of scholarship to guide --- to guide what we do. We know a lot about how to make that happen.

**Q. Do you think coaches are unfair if they don't**

**adopt a task oriented approach?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think they do a lot of harm, right, and they set athletes up to experience all these negative aspects, right, and they don't have fun and they don't try as hard. They don't have as good a relationship, they experience shame. And all of that stuff just means that a lot of kids aren't going to stick with it and we are going to lose a lot. And that just has long-term implications for people living physically active lives, right. When you have bad experiences, you know, a lot of people are running back out there to keep participating.

BY ATTORNEY TRYON:

**Q. Well, officials make calls all the time that upset athletes. Athletes think they're unfair or they're wrong. You're a tennis player. You remember John McEnroe?**

A. I do.

**Q. He yelled all the time. All the time is an exaggeration. He frequently claimed the calls the officials made were unfair, right?**

A. Yes.

**Q. Do you think that the umpires should have**

Page 138

**changed their calls to satisfy him in order to provide a more caring environment for him?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think they should have taken him out of a few tournaments and I feel like that would have nipped it in the bud. But with respect to a caring and task-involving climate, what you're trying to say is we are trying to treat everyone with kindness and respect and we're going to understand that officials are out there trying to do the best they can, and they're going to make mistakes just like all of us make mistakes. And so the goal would be for us to be respectful. And if we feel like bad calls are made we would deal with it in a respectful way, right, but we don't deal with it like Will Smith did, right, like when he --- we're trying to learn to control our emotions, right, and wow, it just makes sport a powerful arena when athletes can learn those terms.

BY ATTORNEY TRYON:

**Q. Right. I understand that. And I'm just asking, so you got rules, you got calls by higher powers and you got to live by those rules. And if you think they're unfair then you should ask them to have them changed, right?**

Page 139

A. Yes.

**Q. But it is still a caring environment and just because you think it is unfair to you in particular doesn't make it uncaring.**

**Is that a fair statement?**

ATTORNEY VEROFF: Objection.

THE WITNESS: You know, the way research is done is you're asking every athlete on the team to fill out a survey, right. So it doesn't mean that there is a 100 percent agreement, right. I may feel like the coach isn't fair, hasn't given me a fair shot, right, and somebody else may not feel that way. But in general, there's sort of a consensus on most teams, you know, that people are seeing it more similarly.

BY ATTORNEY TRYON:

**Q. Yes, I guess I'm just asking specifically about rules. Rules by their very nature, they are not caring, they don't care about individuals. They are just set there and you need to follow them, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah. Hopefully they have been established in a caring way, thinking about what is best for athletes, but there is just so many things across sports that are not necessarily fair, right, and

Page 140

so we just kind of have to keep the focus on the rules. I had an athlete tell me that his teammate has been diagnosed with MS and that doesn't seem very fair, right, that a young person has to go through that, but I'm glad that they are part of a caring and task-involving team where they want this athlete to continue to be part of the team, right. And in more of an ego involving team, we might just say, hey, sorry, you are really going to impair our ability to win. That's our focus, that's why we are here, so you know, have a good life, right. And I mean, what's happening is they are just working with this athlete to still be a vital part of the team.

BY ATTORNEY TRYON:

**Q. Do you think you need to be an athlete to have a fulfilling life?**

A. No.

**Q. I'm glad to hear you say that because I'm not much of an athlete.**

ATTORNEY TRYON: Well, if people want to break for lunch now, I'm okay with that. I can take a break now or we can keep on going. Whatever Dr. Fry --- Professor Fry, whatever your preference is and other counsel?

Page 141

THE WITNESS: It might be nice to have a break at this point.

ATTORNEY TRYON: Okay. Do you want to go and get some lunch?

THE WITNESS: Yes, sounds good.

ATTORNEY TRYON: How long do you need? I don't know what your environment is around you, if you brought a lunch or there's a restaurant nearby. Is half an hour long enough? Do you need longer?

THE WITNESS: No, a half hour would be great.

ATTORNEY TRYON: Then why don't we take a break and come back at ten minutes after the hour?

THE WITNESS: Okay.

VIDEOGRAPHER: Going off the record. The current time reads 1:40 p.m. Eastern Standard Time.

OFF VIDEOTAPE

---

(WHEREUPON, A SHORT BREAK WAS TAKEN.)

---

ON VIDEOTAPE

VIDEOGRAPHER: We are back on the record. The current time reads 2:11:00 p.m. Eastern Standard Time.

BY ATTORNEY TRYON:

**Q. Okay.**

**Let's go back to paragraph 30 of your report. It says athletes high in task orientation also report greater confidence and perceived ability and task orientation has been correlated with both self and team efficacy and greater perceived confidence --- competence, excuse me. You are saying greater confidence and perceived ability. Perceived ability is different than reality, isn't it?**

A. Yes.

**Q. Are you saying that is a good thing?**

A. In the psychology world it is pretty well accepted that perceptions are very important. So yeah, you are right in identifying that this is athletes' perceptions of their ability. And so athletes who have a high task orientation in turn, you know, seem to have more confidence and believe that they have higher ability.

**Q. And then in paragraph 31 you say, by contrast, ego orientation, i.e. the non-pejorative descriptive term for defining success based on ability and performance outcomes is not correlated with perceived ability in general confidence of athletes high in ego**

**orientation was more of based on their perception of ability and having a strong physical presence. But in that first sentence it indicates --- it suggests that ego orientation is based on actual reality --- excuse, actual ability rather than perceived ability. Do I understand that indication correctly?**

A. Where do you see that it is on actual ability?

**Q. Okay.**

**Let me start that over. So in the sentence it says, by contrast, ego orientation i.e. the non-pejorative descriptive term for defining success based on ability and performance outcomes is not correlated with perceived ability in general. Does that mean it's correlated with actual ability rather than perceived ability?**

A. Okay. I understand. No. No, what it means is that if you're --- if you're somebody who's high in task orientation, then you're feeling successful when you give your best effort, when you see improvement, right. Those are things we have more control over. And so when you're focused that way you tend to have higher perceptions of ability, right, because that is your focus. If you are high in ego orientation, right, and so I'm feeling successful if I out perform others, if I

win, if I demonstrate competence, right, to a greater degree than other people, right, so if that doesn't happen but that is how I judge success, then chances are my perceptions of ability are going to be lower.

If I'm the star on the team and I judge success based on how I compare to others, then I probably get a lot of kudos and get reinforced for that. So that's why we will guess there is no correlation there in the way there is task, right. And that is why Nicholls was most concerned about people high in ego orientation who had lower perceptions of ability, because it makes us vulnerable. That's why I'm so focused and care about I'm not --- you know I'm not as good. Does that make sense?

**Q. I'm processing it. I still want to understand it a little better. In paragraph 30, athletes high in task orientation also report greater confidence in perceived ability. Am I right that perceived ability is not actual ability?**

A. Right, it's not. Items would just tap into I would be responding to a question like I'm really good at basketball or something, I'm very skilled in basketball or I'm not very skilled and I would be answering it on a quantitative scale, so it would be my

perception of it.

**Q. Isn't it important that athletes understand their actual ability rather than just their perceived ability?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think it's important for coaches to share with athletes where they are and what they can do to keep improving. I'm not sure it's super beneficial that we need to go around and tell athletes, hey, you're not very good, this person is better than you, right, those are just kind of distractions, but helping people see where they are and what they can do to improve, yeah, would seem valuable.

BY ATTORNEY TRYON:

**Q. In order for an athlete to improve doesn't the athlete need to understand where he or she is rather than just where he or she perceives him or herself to be?**

A. Yes, we get into kind of --- are we talking like morbid ability, right, or --- and so in that sense do I need to tell --- I've got five athletes here. Do I need to make sure they all know where they rank between one and five, right, in my mind who's the best? Or do I just need to take each athlete aside, right, and make

1 sure that they understand here's some areas you could  
2 really improve on, and I care less about even having a  
3 conversation about who's the best right now, right, that  
4 this person is better than this person, right, it's  
5 moot. And that's where Nicholls was coming from. What  
6 if we as coaches did more just to focus people on,  
7 right, on what they could do to keep improving?

8 **Q. And athletics it is certainly obvious, though,**  
9 **what your athletic ability is at least as far things**  
10 **involving racing times, for example, you get your times**  
11 **so you know what your ability is as compared to yourself**  
12 **or as compared to other people, right?**

13 A. Right. I think there is just a lot in sport  
14 that's giving us feedback of how we compare to others.  
15 And also when we see these times it's --- that's  
16 information that we can track how we're improving,  
17 right, and how we are doing.

18 **Q. So why do we share with people --- well, strike**  
19 **that. I will move on.**

20 Okay. Paragraph 32, please. Let me know when  
21 you see that.

22 A. I see it. Thanks.

23 **Q. Athletes high in ego orientation report lower**  
24 **companionship and greater conflict with teammates. For**

1 **clause there you cite only to Balaguer. I'm asking if**  
2 **there are other sources for that contention that**  
3 **athletes high in ego orientation report lower**  
4 **companionship and greater conflict with teammates. And**  
5 **if there are other things, what are those other studies?**

6 A. Like Smith and Small found that in youth sport  
7 athletes, you know, didn't like their coach as much,  
8 didn't think their coach knew as much about the sport,  
9 didn't like their teammates as much when they had like  
10 high ego orientation.

11 **Q. Is there a reason why you didn't cite Smith and**  
12 **Small for that proposition?**

13 A. Yes. Yeah, I think it crosses documents. We  
14 could have added another, you know, 150 references  
15 probably. Tried to keep it more manageable, which it's  
16 just consistent, that if that is something that you care  
17 about, the quality of relationships, then it doesn't  
18 come out often as --- you know, it comes out with the  
19 task orientation, not an ego.

20 **Q. Well, the reason I'm asking this is I read that**  
21 **Balaguer report, and I did not see anything in there**  
22 **that supported this proposition of this first clause of**  
23 **this sentence. Are you confident that it's in there?**

24 A. It would be good for me to review.

1 **that phrase --- you can go ahead and read the whole**  
2 **sentence if you want, but I want to ask you a question**  
3 **about that phrase or that clause.**

4 A. Okay.

5 **Q. So for that clause you cite Balaguer in that**  
6 **study, right?**

7 A. Yes, Balaguer (corrects pronunciation).

8 **Q. Thank you for helping me pronounce that,**  
9 **Balaguer. And is there anything else on which you base**  
10 **that first clause?**

11 A. Yes, there are other references. This paragraph  
12 in general is just referring to we have better  
13 relationships, right, when people are high in task  
14 orientation. They're really valuing that aspect of  
15 helping each other improve. And in an ego orientation,  
16 when, I'm just kind of zoned in on me and me wanting to  
17 show that I'm better than my teammates, right, it just  
18 sets things up to not having as good a relationship.  
19 This doesn't mean that every athlete out there that is  
20 high in orientation, it just means there's a tendency  
21 that this correlates --- that you're much more likely to  
22 see this when people have a high ego orientation.

23 **Q. So I'm just --- my question is a little more**  
24 **precise. Thank you for that explanation. But the first**

1 **Q. If I showed you the article would you be able to**  
2 **locate it without too much difficulty?**

3 A. I'm not sure. I'd probably just have to review  
4 it. But having ---.

5 ATTORNEY TRYON: Well, let's bring it up,  
6 and maybe I've just missed it. And so that would be ---  
7 the name of it is Motivational Climate and Goal  
8 Orientations as Predictors of Perceptions of Improvement  
9 Satisfaction in Coach Ratings Among Tennis Players.  
10 Educators. So Jake, if you could find that and pull  
11 that up.

12 VIDEOGRAPHER: Do you want it marked?

13 ATTORNEY TRYON: Yes. I think we are on  
14 8 now, right?

15 VIDEOGRAPHER: I think it's 7, unless I  
16 missed something.

17 ATTORNEY TRYON: Well, I will take your  
18 word for that.

19 ---

20 (Whereupon, Exhibit 7, Article, was  
21 marked for identification.)

22 ---

23 ATTORNEY TRYON: You know what, I should  
24 ask you, Jake, go ahead and put that in the chat room so

Page 150

1 that Professor Fry can download it and look at it real  
2 quick.

3 VIDEOGRAPHER: Already did.

4 ATTORNEY TRYON: Great.

5 BY ATTORNEY TRYON:

6 **Q. So Professor Fry, you can either look at this**  
7 **with me or it might be best if you just double check in**  
8 **the chat room and then it should download it and you**  
9 **should be able to bring it up and look through there at**  
10 **your --- I don't want to say leisure but how you would**  
11 **prefer to do it.**

12 A. Okay. I may have to get help here because it's  
13 not appearing on my end.

14 **Q. Do you see it in the chat room?**

15 A. Yeah, I can click on it, but then it takes me to  
16 some case view net thing and it says I need a code and  
17 password. I'm using their system, so I'm guessing it's  
18 related to that.

19 VIDEOGRAPHER: Not the link. There  
20 should be a PDF document you can just click open.

21 THE WITNESS: Okay.

22 VIDEOGRAPHER: I don't know how it is on  
23 an iPad, so I will admit I'm at a loss.

24 THE WITNESS: Okay.

Page 152

1 again?

2 VIDEOGRAPHER: You can control the mouse  
3 cursor right now, so you would have to move it over here  
4 and just drag it down or click on this down arrow down  
5 here?

6 THE WITNESS: So I don't really have a  
7 mouse, right, with this. It's just using my finger on  
8 the screen.

9 VIDEOGRAPHER: Right. If it works like  
10 normal iPad things, then you would --- to click  
11 something you would double tap it and then hold, which  
12 sounds convoluted.

13 ATTORNEY TRYON: Well, if you have any  
14 difficulties with it, why don't we let Jake take control  
15 and scroll down with it?

16 THE WITNESS: Okay.

17 I think Dana is outside, if you want me  
18 to get her to help real quick to save time.

19 ATTORNEY TRYON: I'll tell you what,  
20 let's do this. This is not a critical point for me. I  
21 just wanted to try and understand this. So let's come  
22 back to this later. All right?

23 THE WITNESS: Okay.

24 ATTORNEY TRYON: We have time.

Page 151

1 BY ATTORNEY TRYON:

2 **Q. Are you able to look at it now?**

3 VIDEOGRAPHER: The document called 007 at  
4 the beginning?

5 THE WITNESS: When I click on the chat  
6 I'm just seeing one link listed.

7 BY ATTORNEY TRYON:

8 **Q. Underneath the link there should be a PDF.**

9 A. Okay. It's not showing up for me.

10 **Q. Okay.**

11 VIDEOGRAPHER: Alternatively, Counsel, I  
12 can give remote control of the document to her so that  
13 she can scroll on it herself.

14 ATTORNEY TRYON: Let's do that.

15 VIDEOGRAPHER: Okay.

16 THE WITNESS: Thank you.

17 VIDEOGRAPHER: You should have control if  
18 you just try to click on the screen and you just scroll  
19 it and move it. Perfect.

20 THE WITNESS: Okay.

21 So how do I move the document?

22 VIDEOGRAPHER: So if you would move the  
23 cursor like over here and drag it.

24 THE WITNESS: Sorry. Can you say that

Page 153

1 BY ATTORNEY TRYON:

2 **Q. In paragraph 32, you talked several times about**  
3 **the climate, right?**

4 A. Yes.

5 **Q. And in the sentence it says despite the ego**  
6 **involving climates emphasis on the performance outcomes**  
7 **results across studies suggest the benefits of task**  
8 **involving climate may have a direct impact on athletic**  
9 **performance and ultimately improve performance outcomes.**  
10 **So that sentence is talking about the climate, not the**  
11 **individual's orientation, right?**

12 A. That's correct.

13 **Q. And you say it may have a direct impact. So by**  
14 **may that is not suggesting that it's probable, it is**  
15 **just saying that it might. Is that a fair statement?**

16 A. Yes.

17 **Q. Then let me move down to paragraph 33.**

18 A. Can I just say on that point ---?

19 **Q. Yes.**

20 A. I think this is an area within our body of  
21 research that there is less support for, but the studies  
22 that are in place would suggest that perceptions of a  
23 task involving climate would lead to greater  
24 performance. So there is some evidence for that, but I

would agree it's not strong and that is why the wording is softer there, right, but there is no evidence suggesting that perceptions in an ego involving climate would lead to better performance. And so on the one hand people just might be thinking, wow, that's a no-brainer, right, if all you care about performance go with that ego involving climate, but for all these other reasons we would argue it makes sense, right. If people are having more fun and having better relationships and trying hard and so on, that it might lead to better performance.

**Q. In paragraph 33 you talk about young athletes with a high ego orientation participating in a variety of sports have reported higher traits and state cognitive and somatic anxiety as well as greater concentration dysfunction, maladaptive perfectionism and concern over making mistakes. Now, my question is, isn't that true for basically any endeavor, that there's going to be --- you're going to have anxiety in trying to succeed?**

ATTORNEY VEROFF: Objection.

THE WITNESS: You know, definitely anxiety and stress is part of sport. With these climates though what we're seeing consistently is that athletes report

**that an easy thing to do?**

A. No, it is not.

**Q. And it is based on what other people think of you and your work, right?**

A. Yeah. I mean, there's requirements to complete a Ph.D. for sure that involve other people.

**Q. And they're judging your work, right?**

A. Right.

**Q. And that creates, I presume, for most people it creates a lot of anxiety. Did it for you?**

ATTORNEY VEROFF: Objection.

THE WITNESS: You know, at times it was stressful, but I enjoyed every minute of it. And so some of this comes back to anxiety is pretty typical and we're going to experience that, but what I'm feeling about it is helping people develop strong coping skills so that they can deal with that stress and anxiety. And that is, you know, another study that we recently published that people who perceived a caring task involving climate reported greater coping skills, right.

BY ATTORNEY TRYON:

**Q. And to develop those coping skills you need to sometimes follow the rules of others like those on the Ph.D. committee, if that's the right terminology, rather**

that when they perform their best they were less bothered by stress and anxiety. In fact, the kind of epitome of being --- what we call being in flow, right, you just --- you feel high confidence, you're concentrating well, you're not worried about distractions, you're not stressed, right. And so consistently people would report a higher ego orientation, they just --- no matter how it's measured all this kind of bad stuff that we'd rather take out, right, and not have people worried about, young athletes worried about, they just experience it more. So the cognitive anxiety is what's going on up here, right, worry and doubt, and the somatic anxiety is I can't get a grip on my heart rate, my muscles feel tense, I have butterflies and those kinds of things. So we see that more with athletes high in ego orientation.

**Q. Well, when you were going through college and getting your Ph.D., you were striving to do your very best and you were striving to succeed and get As to get your Ph.D. All of those things are something that requires you to succeed and to convince other people how good you are, right?**

A. To succeed and make the world better.

**Q. Right, but to get a Ph.D. that's a tough --- is**

**than saying, hey, committee you're wrong, I'm right, you have to do what I say, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I'm not sure that's related to coping skills, but what you said is true, it does take place when you're working on a Ph.D.

BY ATTORNEY TRYON:

**Q. And pretty much every part of life you can't just say I don't like your rules, do it my way and get your way, you have to cope with the world as it is, not as you want it to be all the time, right?**

A. Right.

ATTORNEY VEROFF: Objection.

BY ATTORNEY TRYON:

**Q. And that's a hard thing, right?**

A. It is.

**Q. But it builds character, doesn't it?**

A. It sure can.

**Q. So let me move on then. I think I understand what you're saying in this paragraph. Looking at paragraph 35, okay, let me see if we addressed some of these things. Have you studied depression and mental health with athletes?**

A. No, it's not my area. Yes, I've read some, but

Page 158

1 no, it's not an area that I studied in depth.

2 **Q. So you haven't written on it?**

3 A. We might have a study where we include some  
4 parameters of psychological well-being, like studies  
5 with kids, looking at how the climate relates to a  
6 caring climate relating to reporting greater hope and  
7 happiness and less depression and sadness, but studying  
8 like depression is not a primary area for me.

9 **Q. Have you looked at the issue for athletes  
10 between injuries and mental health or depression?**

11 A. No, no.

12 **Q. Are you aware that there are studies and papers  
13 on that issue?**

14 A. Yes.

15 **Q. Okay.**

16 **Let me ask you to take a look at --- well,  
17 before we go, have you heard of the American College of  
18 Sports Medicine?**

19 A. I have.

20 **Q. And are they well regarded?**

21 A. Yes.

22 **Q. Have you heard of Andrew Wolanin?**

23 A. I have not.

24 ATTORNEY TRYON: Okay.

Page 159

1 Well, let's bring up this exhibit, which  
2 will be then Exhibit --- I think this will be --- well,  
3 I will just ask, Jake, help me out with numbers. The  
4 title is Depression and Athletes, Prevalence and Risk  
5 Factors.

6 VIDEOGRAPHER: I believe we're on Number  
7 8 now.

8 ATTORNEY TRYON: Okay. Perfect.

9 VIDEOGRAPHER: Just give me one moment.

10 ---

11 (Whereupon, Exhibit 8, Article, was  
12 marked for identification.)

13 ---

14 BY ATTORNEY TRYON:

15 **Q. Have you seen this document that I now marked as  
16 Exhibit-8 before?**

17 A. No, I haven't. Jake, can you show the top again  
18 please?

19 VIDEOGRAPHER: That is as far up as it  
20 goes.

21 THE WITNESS: Okay.

22 BY ATTORNEY TRYON:

23 **Q. Are you familiar with any of the three authors?**

24 A. No.

Page 160

1 **Q. So I am going to ask you about several parts in  
2 here, so it might be helpful to have --- try one more  
3 time to see if you can --- give you access to it, to  
4 give you control over the screen so you can scroll down.  
5 And you should be able to treat it just like anything  
6 else on your iPad, with your fingers or however you do  
7 it.**

8 A. So when I click on control it has like a  
9 keyboard and then it has a question mark.

10 ATTORNEY TRYON: Jake, any input?

11 VIDEOGRAPHER: It sounds like it's just  
12 bringing up the iPad keyboard and there should be  
13 something that looks like a keyboard and that minimizes  
14 the keyboard itself so you can just get back to the  
15 screen.

16 ATTORNEY VEROFF: I'm sorry, Dr. Fry.

17 THE WITNESS: No, go ahead.

18 ATTORNEY VEROFF: I was just going to  
19 ask, Dave, is there any way to get in touch with Dana.  
20 Maybe we could send her the PDF and have her print them  
21 so that the witness could have hard copies. That might  
22 make this all work a little bit easier for any --- for  
23 this or any other studies that you would want her to  
24 look at.

Page 161

1 ATTORNEY TRYON: Yeah, except they're in  
2 a hotel room now. That's one of the --- is Dana outside  
3 the door did you say?

4 THE WITNESS: Yes, is it okay if I just  
5 check with her because I think she has a little business  
6 center set up maybe.

7 ATTORNEY VEROFF: If we can go off the  
8 record for a moment.

9 ATTORNEY TRYON: Great.

10 VIDEOGRAPHER: Going off the record. The  
11 current time reads 239 p.m. Eastern Standard Time.  
12 OFF VIDEOTAPE

13 ---

14 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

15 ---

16 ON VIDEOTAPE

17 VIDEOGRAPHER: We are back on the record.  
18 The current time reads 2:42 p.m. Eastern Standard Time.

19 ATTORNEY TRYON: Okay. If you can now  
20 look at --- give me a moment. Let's look at your  
21 original report on page 12, that would be Exhibit-1.

22 VIDEOGRAPHER: Did you say page 12 or  
23 paragraph 12?

24 ATTORNEY TRYON: Page 12.

Page 162

1 VIDEOGRAPHER: Okay.

2 ATTORNEY TRYON: Okay, right there is

3 great.

4 BY ATTORNEY TRYON:

5 **Q. Okay.**

6 **Do you see that, Doctor Fry?**

7 A. Yes.

8 **Q. So the title you have here is Excluding Groups**  
 9 **from Participating in High school Athletics would**  
 10 **Deprive Them and Their Teammates of a Wide Range of**  
 11 **Educational Benefits. Did you write that?**

12 A. Yes.

13 **Q. Okay.**

14 **Then I would like to compare that to the title**  
 15 **that you have in your latest report, if you could bring**  
 16 **that up, and that is on page ten. So here you change**  
 17 **groups from to excluding transgender students. Why did**  
 18 **you make that change?**

19 A. I think just because it's specific to this case.

20 **Q. Well, the specifics of this case were the same**  
 21 **before as they are now, so do you have any better**  
 22 **explanation?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: You know, I edit everything

Page 164

1 **Q. Let me ask you about Special Olympics. Is the**  
 2 **entrance into Special Olympics --- do you know anything**  
 3 **about --- let me back up. You're aware of what Special**  
 4 **Olympics is, right?**

5 A. Yes, I'm aware of it.

6 **Q. And do you know if there are specific**  
 7 **requirements in order to be able to participate in**  
 8 **Special Olympics?**

9 A. I know there are. I couldn't tell you what they  
 10 are across the different categories and all.

11 **Q. Can able bodied athletes and able minded**  
 12 **athletes participate in Special Olympics?**

13 A. Special Olympics was created to give athletes  
 14 --- okay. Dana said she hadn't received those. Just to  
 15 double check, that it is Dana@midwestreporters.net.  
 16 It's not .com.

17 VIDEOGRAPHER: I will double check it.

18 THE WITNESS: Thank you.

19 ATTORNEY TRYON: Sorry to interrupt your  
 20 flow.

21 BY ATTORNEY TRYON:

22 **Q. So my question was can able-bodied athletes and**  
 23 **able-minded athletes participate in Special Olympics,**  
 24 **and you started to say Special Olympics was created.**

Page 163

1 I write, and so if I see something that may clarify more  
 2 or change a word, you know, that makes it better, then I  
 3 would do that. I think that's what happened here.

4 BY ATTORNEY TRYON:

5 **Q. Are you aware of any groups being excluded from**  
 6 **participating in youth or adult athletics?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: You know, I think a lot of  
 9 times kids with disabilities are kept out. I think kids  
 10 who have limited financial resources sometimes are  
 11 limited. I think groups are --- so it may not be a rule  
 12 that you cannot play, but you know, there are other  
 13 groups who miss out on the opportunities to play.

14 BY ATTORNEY TRYON:

15 **Q. Other than that, can you think of any groups**  
 16 **that are excluded by any rule or requirements from any**  
 17 **athletic activities?**

18 ATTORNEY VEROFF: Objection.

19 THE WITNESS: Not that's coming to mind  
 20 that are, you know, like obvious or stated in the rules,  
 21 but I think there's personal different ethnic, minority  
 22 groups, for example, that might have less exposure to  
 23 sport, things like that.

24 BY ATTORNEY TRYON:

Page 165

1 A. Right. The answer is no, they can't  
 2 participate.

3 **Q. So that is an exclusion, right?**

4 A. Yes.

5 **Q. And it's a categorical exclusion, right?**

6 A. Yes.

7 **Q. Do you think it's a fair exclusion?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: Sorry. Yes, in this case.

10 BY ATTORNEY TRYON:

11 **Q. And why?**

12 A. Because those able-bodied athletes have another  
 13 area where they can compete.

14 **Q. And so Special Olympics is especially designated**  
 15 **for certain athletes who are not able to compete against**  
 16 **able-bodied and able-minded athletes, right?**

17 A. Uh-huh (yes), yes.

18 **Q. So it's essentially a protected category, right?**

19 ATTORNEY VEROFF: Objection.

20 THE WITNESS: Yes. I don't know if it is  
 21 protection so much, as just provide an opportunity.

22 BY ATTORNEY TRYON:

23 **Q. And that exclusion is of --- with respect to**  
 24 **Special Olympics, you wouldn't call that arbitrary,**

1 would you?

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: No.

4 BY ATTORNEY TRYON:

5 **Q. Now, if we go down in paragraph 37, the second**  
 6 **sentence says, if transgender students are arbitrarily**  
 7 **excluded from youth sports they are, in turn, deprived**  
 8 **of those positive experiences and outcomes and their**  
 9 **teammates are deprived of a genuinely optimal sports**  
 10 **experience.**

11 **Do you see that?**

12 A. I do.

13 **Q. If that exclusion is based on safety concerns or**  
 14 **performance concerns then it would not be arbitrary.**

15 **Correct?**

16 ATTORNEY VEROFF: Objection.

17 THE WITNESS: If there were strong  
 18 evidence for those.

19 BY ATTORNEY TRYON:

20 **Q. And just --- I think we covered this, but I just**  
 21 **want to make sure I'm correct, you are not an expert on**  
 22 **safety issues, right?**

23 A. That's right.

24 **Q. And you are also not an expert on performance**

1 **issues, right?**

2 A. That's right.

3 **Q. What would you call strong evidence?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: I call it data that the  
 6 experts come to agree that --- you know, how they can  
 7 guide the rules for sport, right, and balance inclusion  
 8 and fairness.

9 BY ATTORNEY TRYON:

10 **Q. Would you agree with me that not all experts**  
 11 **agree on everything, even with their own field, right?**

12 A. That's right.

13 **Q. Is there a minimum number of experts that would**  
 14 **have to agree before it's strong evidence or is that**  
 15 **sort of a --- I don't know how to say it. What do you**  
 16 **think?**

17 ATTORNEY VEROFF: Objection.

18 THE WITNESS: I think with respect to  
 19 this case, that organizations can, you know, weigh in on  
 20 the evidence there to see --- I mean, there is just a  
 21 lot of injury within sport that happens, right, it's  
 22 just part of sport. So I think they would have to  
 23 really consider the evidence to see if there are safety  
 24 concerns for having transathletes participate.

1 BY ATTORNEY TRYON:

2 **Q. Do you think in high school that every sport**  
 3 **should have a different rule of when transgender girls**  
 4 **can participate in those specific girls sports?**

5 ATTORNEY VEROFF: Objection.

6 THE WITNESS: You know, I just come back  
 7 to my expertise and why I've been asked to be on this  
 8 case is just to address the benefits that athletes  
 9 receive from participating in sport. So I wouldn't  
 10 perceive that they are at the high school level. There  
 11 is different rules for every sport, but I don't know  
 12 where we will be down the road, right, as we just figure  
 13 all this out and strive to include all athletes.

14 BY ATTORNEY TRYON:

15 **Q. So you don't know what the rules should be?**

16 ATTORNEY VEROFF: Objection.

17 THE WITNESS: Right, I'm not the best  
 18 person to make those decisions. I think we need people  
 19 who are studying these issues, and that is beyond my  
 20 expertise.

21 BY ATTORNEY TRYON:

22 **Q. Fair enough. I don't want you to go beyond your**  
 23 **expertise. Well, let me ask you just some related**  
 24 **questions. And you may say the same thing on this, but**

1 **I'm going to ask you and we will see if you have any**  
 2 **thoughts. You may have already answered this, but let**  
 3 **me ask you these. On what teams should student athletes**  
 4 **participate on if they are transgender? If they are a**  
 5 **transgender girl, should they participate on boys or**  
 6 **girls teams?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: I think it depends what the  
 9 rules are, but, you know, over the last decade across  
 10 organizations, organizations have found a way to allow  
 11 transgender females to participate.

12 BY ATTORNEY TRYON:

13 **Q. And those rules have changed over time, right?**

14 A. They do.

15 **Q. NCAA just changed its rules, right?**

16 ATTORNEY VEROFF: Objection.

17 BY ATTORNEY TRYON:

18 **Q. Did you answer?**

19 A. You know, I'm not sure of the latest. I thought  
 20 they were going to leave --- yeah, they're going to be  
 21 looking at other options and getting feedback from the  
 22 governing bodies is my understanding.

23 **Q. Are you aware of what the Rugby Association**  
 24 **says?**

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: No.

3 BY ATTORNEY TRYON:

4 **Q. Are you aware of USA Swimming, what their rules**  
5 **are?**

6 ATTORNEY VEROFF: Objection.

7 THE WITNESS: I couldn't tell you all the  
8 details, but I know USA Swimming really is trying to  
9 find a way to be inclusive, and so I know at the youth  
10 levels that transgender youth are able to participate,  
11 right, and that they have allowed some rule changes for  
12 what swimsuit kids wear and things like that.

13 BY ATTORNEY TRYON:

14 **Q. But those transgender girls have to --- or**  
15 **transgender women have to meet certain requirements**  
16 **before they can participate on a female team.**  
17 **Right?**

18 ATTORNEY VEROFF: Objection.

19 THE WITNESS: Yes.

20 BY ATTORNEY TRYON:

21 **Q. Are you aware of the specifics?**

22 A. No. I've read some of this, but I'm not sure  
23 I've retained it and it's not something that I spent a  
24 long time on across sports.

1 across states.

2 BY ATTORNEY TRYON:

3 **Q. Do you know of any rule --- do you know of any**  
4 **rule that specifically addresses nonbinary athletes?**

5 ATTORNEY VEROFF: Objection.

6 THE WITNESS: No.

7 BY ATTORNEY TRYON:

8 **Q. Have you heard the term bigender?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: Yes.

11 BY ATTORNEY TRYON:

12 **Q. The definition that I have read is a person who**  
13 **identifies as bigender has two genders. Is that your**  
14 **understanding as well?**

15 ATTORNEY VEROFF: Objection.

16 THE WITNESS: Yes.

17 BY ATTORNEY TRYON:

18 **Q. And in high school the biological male**  
19 **identifies as bigender and wants to participate on a**  
20 **girls sports team, should that be allowed?**

21 ATTORNEY VEROFF: Objection.

22 THE WITNESS: I think greater context is  
23 needed. There's a --- you know, understand what's going  
24 on with that particular athlete. And again, I just want

1 **Q. Okay.**

2 **Let me ask you then if you have ever heard of**  
3 **the term nonbinary?**

4 A. I have heard of that term.

5 **Q. Is this a fair definition, that it is people who**  
6 **do not describe themselves or their genders as fitting**  
7 **in the category of man or woman? Does that sound like a**  
8 **fair definition?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: Yes.

11 BY ATTORNEY TRYON:

12 **Q. Should a biological male who identifies as**  
13 **nonbinary who is an athlete participate in high school**  
14 **on the boys or girls team?**

15 ATTORNEY VEROFF: Objection.

16 THE WITNESS: I think it depends on what  
17 the rules are. And I think the goal of the sport  
18 organizations seems to be how can we look at these  
19 issues and just still try to be as inclusive as  
20 possible.

21 BY ATTORNEY TRYON:

22 **Q. What are the rules on that in high school?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: Right, it seems to vary

1 to --- this is a little bit beyond my expertise and I'm  
2 here to just reenforce that there is a lot of benefits  
3 for all athletes to be able to participate.

4 BY ATTORNEY TRYON:

5 **Q. What if a biological male wants to be on a girls**  
6 **team, even though he does not identify as a girl, should**  
7 **he be allowed to do so?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: No.

10 BY ATTORNEY TRYON:

11 **Q. And why not?**

12 A. Because he's wanting to play on a --- on a  
13 female team and he doesn't --- hasn't transitioned and  
14 isn't identifying as a female.

15 **Q. If a biological male wants to participate on a**  
16 **girls team and identifies as a female but has not**  
17 **transitioned in any way, should he be allowed to**  
18 **participate on the girls team?**

19 ATTORNEY VEROFF: Objection.

20 THE WITNESS: In --- in general I would  
21 say no, but we're missing the context. What if this was  
22 --- yeah, I think we want that person to transition.

23 BY ATTORNEY TRYON:

24 **Q. Okay.**

**What transitioning would be necessary?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think that's out for debate, discussion, and to figure out at these different levels of sports what that criteria is going to be.

BY ATTORNEY TRYON:

**Q. So in high school is it simply changing your name to a female name, would that --- for a male to change to a female name, would that be adequate to then be allowed to play on the girls team?**

ATTORNEY VEROFF: Objection.

THE WITNESS: No, I'd say in general that wouldn't be the case.

BY ATTORNEY TRYON:

**Q. Okay.**

**If that person, in addition to changing his name to a female name and says I want to be addressed using female pronouns, is that adequate?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think that we've got this kind of continuum it sounds like, right, to what degree people are transitioning to know transitioning. And to just have a blanket statement that no one --- that no transathlete can ever participate in sport ever across

THE WITNESS: If we understand that transathletes are identifying with a particular gender, so in this case transfemales, then no, that wouldn't be an option to go participate on a male team.

BY ATTORNEY TRYON:

**Q. Well, why is that not an option?**

A. Right, well, I just point to PBJ, right, who has identified as a girl for a long time and looks very much like a girl and is the --- I believe the principal said, you know, we're just creating problems. This little girl can be with her friends, can run cross-country, can reap all these benefits, right, and it's not an option to send her over to the boys team because she is a girl.

**Q. Do you need to look like a girl to be on the girls team?**

ATTORNEY VEROFF: Objection.

THE WITNESS: No, I'm not sure what that means.

BY ATTORNEY TRYON:

**Q. Well, there are girls that look masculine that are girls and they, of course, want to be on the girls team. I would presume you would agree they should be on the girls team, right?**

ATTORNEY VEROFF: Objection.

the universe is harmful for many athletes, right. And so these specifics of where we are going to go with what the criteria is for athletes, right, I think there's a lot of people studying these issues and weighing in and I'm not one of those individuals who's really studying this stuff in detail at that level, but I do know ---

BY ATTORNEY TRYON:

**Q. Sorry. Go ahead.**

A. I do know that inclusion in sport has many benefits and that it would be a shame to not hold a category of athletes out to participate.

**Q. So there would be nothing to stop a male athlete, a biological male athlete identifying as a female from participating on a boys team, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Right. I did not state that. I'm not sure what that criteria should be, but it helps us balance, being inclusive and also being fair.

BY ATTORNEY TRYON:

**Q. So it's not excluding that person from participating in sports, it's just excluding that person from participating on the team that person wants to participate on, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Right, there are --- you know, we may get into a debate about what is masculine or feminine if we're saying that --- you're describing somebody as more --- a female that's more masculine, but maybe other people see it that there's a feminine quality to whatever, being strong, yeah, having a solid build, those things.

BY ATTORNEY TRYON:

**Q. Well, you're the one that pointed out that BPJ looks like a little girl and suggesting that that was one of the reasons that BPJ should be on the girls team. Did I understand that incorrectly?**

A. What, I meant to emphasize is that she sees herself as a girl, and so we put her in a really uncomfortable spot to say you can't be with the girls and you have to go be with the boys even though in your heart of hearts you know you're a girl.

**Q. Can that be uncomfortable for the biological girls on the girls team if biological boys who identify themselves as internally as being girls are allowed to participate on the girls team?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Could --- you know, could the fact that a transgender girl is participating in a

1 sport, on a team, could that make someone feel  
2 uncomfortable? Definitely it's possible.

3 BY ATTORNEY TRYON:

4 **Q. Not only is it possible, but it happens, right?**

5 ATTORNEY VEROFF: Objection.

6 THE WITNESS: Yes, I think it probably  
7 happens. It probably happens both ways, that there are  
8 also teammates that are very supportive.

9 BY ATTORNEY TRYON:

10 **Q. But the feelings of the biological girls who are**  
11 **uncomfortable with a biological male identifying as a**  
12 **female or a transgender girl, as you have said, their**  
13 **feelings are important too, right?**

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: You know, pulling from my  
16 expertise, if we're trying to create this caring task  
17 involving climate, then yes, it would be very important  
18 for a coach to sit down with those athletes and talk and  
19 encourage them. If the transfemale athlete is playing  
20 by the rules and has done everything that has been asked  
21 and they are part of a team, then coaches should really  
22 talk with the athletes than help them understand, help  
23 them not let this be a distraction, help them embrace  
24 all their teammates, right. There is so much in the

1 **this child as one of our own even though this child is a**  
2 **transgender female, this transgender female will be on**  
3 **the boys team and you will treat this transgender female**  
4 **with respect and be a full part of the team, right, that**  
5 **coach could do that?**

6 ATTORNEY VEROFF: Objection.

7 THE WITNESS: Yes, the problem is that the  
8 transgender athlete is a female, right, and has the  
9 right to participate with the female team.

10 BY ATTORNEY TRYON:

11 **Q. Where is that right found? You just said she**  
12 **has that right. Where is that right?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: I mean as it comes within  
15 the rules, right. I'm sorry, Julie. I mean, as it  
16 falls within the rules, right.

17 BY ATTORNEY TRYON:

18 **Q. Well, right now the rule is HB-3293, which says**  
19 **that that transgender girl must participate on the boys**  
20 **team. And since that is the rule, following your ---**  
21 **your logic, you go to the boys team and the boys coach**  
22 **and you say this child is going to be participating in**  
23 **this team, you will welcome her with open arms onto our**  
24 **team just as we do on football, we open with --- welcome**

1 sport that any of us on a team might like to change,  
2 right, or wish our teammates did other things, right,  
3 wish they worked harder or wish they used less  
4 recreational drugs or anything, right, but we are a team  
5 and we come together and we just support each other and  
6 we keep the focus on being the best we can be every day.

7 BY ATTORNEY TRYON:

8 **Q. So biological girls just need to knuckle under**  
9 **and accept things the way that you want them to be. Is**  
10 **that what you are saying?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: I'm saying being part of a  
13 team is challenging, and for some people having a  
14 teammate that is transgender may be one of those  
15 challenges they have to deal with. But everyone is  
16 dealing with challenges with the teams, right. And if  
17 that transgender athlete is there playing by the rules,  
18 right, and is allowed to be there, then yeah, I guess  
19 the others have to deal with it.

20 BY ATTORNEY TRYON:

21 **Q. So on the other hand, you can tell that**  
22 **transgender female to participate on the boys team and**  
23 **the coach on the boys team would sit down with the boys**  
24 **and say you will not make fun of this child, you accept**

1 **with open arms girls who are playing on a boys football**  
2 **team, right?**

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: My understanding in this  
5 case is that the judge is --- has kind of looked at the  
6 evidence and said right now I think there is potential  
7 discrimination and so we're going to let BPJ continue to  
8 compete and all through this so ---.

9 BY ATTORNEY TRYON:

10 **Q. That's right, the Judge did say that for now,**  
11 **but he did not say that for everything. But I'm asking**  
12 **for a more general rule. Putting aside BPJ, as a**  
13 **general rule, why would you say coach of the boys team,**  
14 **you will allow these transgender girls to come and play**  
15 **on your team and you will welcome them with open arms**  
16 **just as we do with our football teams that allow girls**  
17 **to play on them?**

18 ATTORNEY VEROFF: Objection.

19 BY ATTORNEY TRYON:

20 **Q. Because after all, as you said, the transgender**  
21 **girl is a girl and so should be allowed to play on the**  
22 **boys team if she chooses?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: I think football is a great

1 sport, and I wish they had male and female teams.  
 2 Typically, it's just a male team, so a female who wants  
 3 to play football doesn't have another option. But in  
 4 this case BPJ and others who identify as a female and  
 5 should be able to compete with other females, their  
 6 friend group and --- so I see that as an indifference.  
 7 BY ATTORNEY TRYON:

8 **Q. Their friend group? So girls can't have boy**  
 9 **friends?**

10 A. No. I meant it --- sorry, I meant in this case  
 11 BPJ is saying her closest friends are on the girls team.  
 12 She is a girl and she --- and so it would be harmful,  
 13 not fair to not let her compete with that team.

14 **Q. How do you define fair? You told me before you**  
 15 **are not an expert on fairness. Are you now saying that**  
 16 **you do know what is fair?**

17 ATTORNEY VEROFF: Objection.

18 THE WITNESS: I'm just keeping focused on  
 19 what the rules are and the Judge has ruled right now  
 20 that BPJ should be able to compete with the girls  
 21 because she is a girl, and so from my perspective,  
 22 that's where it stands right now.

23 BY ATTORNEY TRYON:

24 **Q. Okay.**

1 **That's just because that's what the Judge said**  
 2 **then, right?**

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: No. I think the core issue  
 5 is BPJ identifies as a girl, has lived the majority of  
 6 her life as a girl and wants to be able to participate  
 7 in her school activities as a girl, including  
 8 cross-country.

9 BY ATTORNEY TRYON:

10 **Q. So how long do you think a transgender girl has**  
 11 **to live as a girl before participating on the girls**  
 12 **team?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: Again, I think I'm not the  
 15 best person for that line of inquiry. I'm not sure, but  
 16 I know others are studying that, those kind of issues,  
 17 and can add greater insight to it.

18 BY ATTORNEY TRYON:

19 **Q. Okay.**

20 A. I'm just someone who would hate to see BPJ not  
 21 be allowed to participate in her school activities, just  
 22 to be told no, I'm sorry.

23 **Q. On the girls team?**

24 A. Right.

1 **Q. And of course, not all athletes compete on**  
 2 **teams. Sometimes if they just love to run, if that is**  
 3 **the key, they just love to run, they don't have to be on**  
 4 **a team to run, right?**

5 A. Right.

6 ATTORNEY TRYON: So we have gone for an  
 7 hour. And I would like to get some documents printed  
 8 since we're not able to easily look at them on your  
 9 iPad. So why don't we go off the record to see if we  
 10 can get that taken care of. Is that okay with you,  
 11 Julie?

12 ATTORNEY VEROFF: That is great. Thank  
 13 you.

14 VIDEOGRAPHER: Going off the record. The  
 15 current time reads 3:15 p.m. Eastern Standard Time.  
 16 OFF VIDEOTAPE

17 ---

18 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

19 ---

20 ON VIDEOTAPE

21 VIDEOGRAPHER: We are back on the record.  
 22 The current time reads 3:37 p.m. Eastern Standard Time.  
 23 BY ATTORNEY TRYON:

24 **Q. Professor Fry, thank you for helping us with**

1 **that technical issue.**

2 A. No problem.

3 **Q. I would like you to find the exhibit that says**  
 4 **Depression in Athletes. It should be Exhibit-8, I**  
 5 **believe.**

6 A. I've got it.

7 **Q. Okay.**

8 I've lost you. There you are. Okay. Let me  
 9 find the right page I'm outlining to. Okay. So Exhibit  
 10 8 is Depression in Athletes: Prevalence and Risk  
 11 Factors by Andrew Wolanin and other authors, right?

12 A. Yes.

13 **Q. So I wanted to ask you about a passage on the**  
 14 **second page of this, which is page 57, under the title**  
 15 **Sports Injuries and Depression at the bottom of the**  
 16 **first column. So I will just read the passage that I**  
 17 **have a question about and if you choose to read it, too,**  
 18 **if you want to read it more --- in fact, did you already**  
 19 **read the abstract on this earlier?**

20 A. I just did.

21 **Q. Okay.**

22 So you've read the abstract. My question is  
 23 on, as I said, under Sports Injuries and Depression.  
 24 And I will just read into the record, Bruer and Petrie,

Page 186

seven in parentheses, were among the first researchers to compare depression symptoms between athletes who had and had not experienced injuries. In this retrospective study it was found that athletes who experienced an injury during the previous year reported significantly higher depression symptom scores than those reported by non-injured athletes, as measured by the Validated Center for Epidemiological Studies Depression, parentheses, CES-D scale. Do you see that?

A. I do.

**Q. And my question is do you have any reason to dispute this or contest this finding in this statement?**

A. No.

**Q. Would it be fair to say that you agree with it?**

A. You know, it's retrospective, so they're going back in time and asking, hey, when you were injured what was going on, but no, I would accept this is --- could be a legitimate finding.

**Q. Okay.**

Then in the next column, first full paragraph, there has been a recent surge of evidence suggesting that sports concussions can lead to changes in emotional state, parentheses, 14, closed paren, period. Furthermore, there is recent evidence to suggest that

Page 187

sports concussions can have long-lasting emotional impact. And my question is, do you have any reason to contest this statement? And feel free to look at it and make sure I'm not reading it out of context.

A. No, I don't contest this.

**Q. Then in the beginning of the last full paragraph on the page it says, while the relationship between concussion and depression may be significant there is also evidence to suggest that a concussion may have the same effect as other injuries on mental health. For example, Main Wearing, et al., 18 in parentheses, conducted a study to examine the differences between emotional responses in athletes who had a concussion compared with anterior cruciate ligament, ACL, injury. They found that athletes with ACL injuries had more severe levels of depression and longer duration of depression compared to those athletes with concussion. Do you see that?**

A. I do.

**Q. And do you have any reason to contest that statement?**

ATTORNEY VEROFF: I'll just object to the extent this statement relies on a study that is actually not before the witness.

Page 188

BY ATTORNEY TRYON:

**Q. Go ahead, you may answer.**

A. Okay.

You know, there is probably just a lot of background to this, so I agree. I haven't read this one but I would just say ACL injuries can be extensive and last over months, right, and take an athlete out of sports for months. Whereas a concussion, you know, it varies in severity and somebody might be back relatively quickly in comparison. But, you know, both of --- both of these injuries are not fun for athletes to deal with and, yeah, can cause stress and depression.

**Q. Okay.**

**So I think you would agree that it's important for athletes to avoid injuries where possible, right?**

A. Right, right, and --- yeah.

**Q. And would you agree that it is important to have rules in place to avoid injuries where possible?**

A. Yes, I would agree.

**Q. And would you agree that we don't need to wait for actual harm before putting rules in place to prevent harm if it's reasonably foreseeable?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, the keyword is

Page 189

reasonably.

BY ATTORNEY TRYON:

**Q. Right. So you agree with that but focusing on the word reasonably, right?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Right.

BY ATTORNEY TRYON:

**Q. Would you agree that segregation of male and female sports is at least in part to protect girls from injury, at least for some sports?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Possibly. I would just note that there is tremendous variability within each gender and if that were totally what was driving this then we really would be concerned about some, for example, not as strong males competing against bigger, stronger males and same with females. So the issue just transcends gender, you know, it's an issue within each gender.

BY ATTORNEY TRYON:

**Q. Well, you said you had some familiarity with Title 9, right?**

A. Yes.

**Q. And Title 9 divides sports into boys --- male**

1 **and female sports in some instances, right?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: Yes.

4 BY ATTORNEY TRYON:

5 **Q. And in particular, with respect to contact**  
6 **sports, right?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: Yes.

9 BY ATTORNEY TRYON:

10 **Q. And would it be fair to say that those contact**  
11 **sports Title 9 does that specifically to --- for safety**  
12 **purposes?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: I think it's fair to say  
15 that that is a --- is a concern, yeah.

16 BY ATTORNEY TRYON:

17 **Q. You wouldn't say that Title 9, the regulations**  
18 **for Title 9 that regulate that, do you think those are**  
19 **unfair or should be determined to be illegal?**

20 ATTORNEY VEROFF: Objection.

21 THE WITNESS: Right, no.

22 BY ATTORNEY TRYON:

23 **Q. So let's go back to the study by --- I will say**  
24 **it wrong, in Balaguer?**

1 **of your most recent report. Okay. So the first clause**  
2 **of that first sentence says athletes high in ego**  
3 **orientation report lower companionship and greater**  
4 **conflicts with teammates and you cite Balaguer for that**  
5 **proposition. I simply was not able to find that**  
6 **proposition in the Balaguer report. By the way, the**  
7 **University of Valencia, where is that? Is that in**  
8 **Spain?**

9 A. It is.

10 **Q. Then why does Elizabeth have a French name? I'm**  
11 **sorry. If you could just look through and tell me if**  
12 **you can see the language that supports your language in**  
13 **paragraph 32.**

14 A. Yeah, yeah, just one more second. Yeah, okay.  
15 They give you this. I think this wasn't the best  
16 article. It was referring to the coach instead of the  
17 teammates with this one. But if you would look on ---  
18 or maybe --- 383, that paragraph in the middle of the  
19 first column. Yeah, just a little bit lower. But the  
20 wording in this paragraph on the left, yeah, if you can  
21 fit the whole thing in again. Right. So partway down  
22 it's just asking about --- to write your current coach  
23 or somebody that --- so one would be just doesn't  
24 coincide at all with the coach I would like to have

1 A. Yes, Balaguer.

2 **Q. Balaguer, thank you. Do you speak French?**

3 A. No, but she is one of my favorite people in the  
4 world.

5 **Q. Oh, okay.**

6 VIDEOGRAPHER: Counsel help me out here,  
7 which exhibit number is that?

8 THE WITNESS: Maybe 2.

9 ATTORNEY TRYON: No, the Balaguer.

10 VIDEOGRAPHER: If you can tell me the  
11 title I can tell you the number.

12 ATTORNEY TRYON: I'm sorry.

13 VIDEOGRAPHER: I said if you can tell me  
14 the title I can tell you the number.

15 ATTORNEY TRYON: Here it is. I think it  
16 is number 7, Motivational Climate and Goal Orientation  
17 as predictors of Perceptions.

18 VIDEOGRAPHER: Correct, that would be  
19 Number 7.

20 BY ATTORNEY TRYON:

21 **Q. And is that printed out for you, Professor Fry?**

22 A. Yes.

23 **Q. And going back in the report --- let me see if I**  
24 **can find the right paragraph. Here we go, paragraph 32**

1 versus my ideal coach. So the lower rating on the coach  
2 is just --- that is not a good thing when you're going  
3 this is not the coach that I want, right, or all the way  
4 up to this is my ideal coach. So it supports the  
5 findings that relationships aren't that strong, but it  
6 is not the best study --- or you know, it shouldn't have  
7 been slotted there because it's just referring to the  
8 coach instead of the athletes. If you look at that  
9 table underneath where we're looking now, Table 2.  
10 BY ATTORNEY TRYON:

11 **Q. I'm looking at it.**

12 A. Whoops, is that it. Under satisfaction and so  
13 the middle part on the left and the bottom one,  
14 satisfaction with the coach, you can just see that the  
15 more you perceive a task climate, the more you are  
16 thinking this is the ideal coach, I'd like to have, the  
17 more respect I have for the coach, or however you want  
18 to put that in your words and the more you perceive an  
19 ego climate the less and the more on the task  
20 orientation, you are more likely to just say this is a  
21 coach I'm glad I have. And with the ego orientation,  
22 it's just not significant --- so anyway, it supports  
23 the results for saying overall, but that was not the  
24 best reference there. It shouldn't have been used right

Page 194

1 there.

2 **Q. So just to make sure I understand then, the**  
 3 **Balaguer report does not actually support the idea that**  
 4 **athletes high in ego orientation report lower**  
 5 **companionship and greater conflict with teammates,**  
 6 **right?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: Right.

9 BY ATTORNEY TRYON:

10 **Q. Do you believe Smith and Small does?**

11 A. Yeah. You know, a little while ago when we were  
 12 looking at that passage, it just included like ten  
 13 variables that were cognitive anxiety and worry and  
 14 concentration disruption and I don't know, five other  
 15 things, a lot of ways to measure stress. And so across  
 16 these studies a lot of ways that these relationships  
 17 with coaches and athletes, but it's not like everyone is  
 18 using one uniform measure. Yeah, so there's probably  
 19 more studies showing that you have better relationships  
 20 when people perceive a task involving climate or have a  
 21 task orientation and then it's kind of a mix on the ego  
 22 side. So sometimes that comes out and sometimes it  
 23 doesn't.

24 **Q. Don't studies show that the best mix is a high**

Page 196

1 **Q. You bet. So let me redirect your attention to**  
 2 **paragraph 39. So in the last --- let's see, the**  
 3 **sentence that says because these positive benefits are**  
 4 **fostered in task involving environment, arbitrary**  
 5 **exclusions can cause harm not only to the athletes who**  
 6 **are excluded but also to the other athletes on the team.**  
 7 **Can you tell me what harms it causes to other athletes**  
 8 **on the team?**

9 A. It could cause harm to athletes who aren't  
 10 allowed to have their --- their friends participate,  
 11 their friends who should be on the team, right, if ---  
 12 BPJ was not allowed to participate and her friends  
 13 really were looking forward to that being a part of the  
 14 sport, right. The sport experience is to share that  
 15 together. That could be harmful. It is also just, you  
 16 know, it could be a missed opportunity to --- for kids  
 17 to learn and to grow and to become more familiar and to  
 18 become more accepting, right.

19 **Q. So if that's the case, couldn't the coach just**  
 20 **say to them I know you would like to have your friend on**  
 21 **the team, but that's not the way it works and help them**  
 22 **work through that, just as you told me the coach can**  
 23 **counsel kids who disagree with the decisions --- some**  
 24 **other decisions?**

Page 195

1 **ego orientation and a high task orientation?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: No, I wouldn't agree with  
 4 that, that mixes --- it's not necessarily that that is  
 5 harmful, right, having a high task and high ego. But to  
 6 say it is the best, no, I wouldn't say that.

7 BY ATTORNEY TRYON:

8 **Q. Is Smith and Small cited in the bibliography?**

9 A. One of their articles by Grossbar is, but that  
 10 is looking more at the orientations in climate. That  
 11 one, I lost that page. I was just trying to see if  
 12 there was another one. There is one by Cummings, 2007,  
 13 Is Winning Everything, the Contributions of Climate  
 14 and ---.

15 **Q. And that is going to tell me that --- is going**  
 16 **to support the statement that ego orientation creates**  
 17 **more conflict?**

18 A. No, no. I'm not sure. I think I'd have to step  
 19 back and review to tell you for sure what those are, but  
 20 I can certainly do that.

21 **Q. All right.**

22 **Well, let's move on. I don't want to keep you**  
 23 **here any longer than we need to be here.**

24 A. Thank you. I appreciate that.

Page 197

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: Okay.

3 Definitely a coach could do that, but  
 4 that doesn't change the fact that --- that it could be  
 5 harmful in the sense that knowing that other people you  
 6 care about and evaluate are being excluded in an unfair  
 7 way.

8 BY ATTORNEY TRYON:

9 **Q. And that term, the unfair way, is something that**  
 10 **you said that you are not an expert on what's fair and**  
 11 **what's unfair, right?**

12 A. Right. I said it's not a primary area of study,  
 13 right.

14 **Q. Yeah. Well, I want to ask you a question. I**  
 15 **think you're referring to the Plaintiff as PBJ, with**  
 16 **first letter being P.**

17 **Am I hearing you right?**

18 A. I didn't think so. But it does --- but BPJ.  
 19 Sorry.

20 **Q. All right. I want to make sure we're all saying**  
 21 **the correct initials.**

22 VIDEOGRAPHER: Excuse me, Counsel. If I  
 23 could interrupt for a second. If I could just ask the  
 24 witness to kind of sit up. You're starting to slouch

Page 198

1 down and your head is getting cut off in the video.  
2 Thank you.

3 THE WITNESS: All right. Sorry about  
4 that.

5 BY ATTORNEY TRYON:

6 **Q. You're not saying that any West Virginia sports**  
7 **organization or educational education has adopted an**  
8 **ego-promoting philosophy, are you?**

9 A. I'm not.

10 **Q. And you don't know of any coaches in West**  
11 **Virginia that have either, right?**

12 ATTORNEY VEROFF: Objection.

13 THE WITNESS: No.

14 BY ATTORNEY TRYON:

15 **Q. And a team can build a task oriented climate**  
16 **with sports separated by sex, right?**

17 A. That's right.

18 **Q. Do you know if female teams are better at**  
19 **building task oriented climates than boys teams or vice**  
20 **versa?**

21 A. Yeah. It's possible to build a strong task  
22 involving caring climate in both teams with males and  
23 females. There may be a slight tendency across some  
24 studies where those scores come out a little bit higher

Page 200

1 THE WITNESS: Right, I think it comes  
2 down to a matter of administrators in sport leagues and  
3 having a desire to provide coaching education, try to  
4 help coaches understand this research and to help foster  
5 caring and task involving climate.

6 BY ATTORNEY TRYON:

7 **Q. Are you suggesting there should be a statewide**  
8 **or nation-wide rule on this?**

9 A. No.

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: No, I'm not suggesting.  
12 I'm sorry, Julie.

13 ATTORNEY VEROFF: That is quite okay. Go  
14 ahead.

15 THE WITNESS: No, I'm not suggesting  
16 that, although I would just note that Canada has a basic  
17 coaching education for anyone who is going to work with  
18 even very young athletes, right, and then they have  
19 these different levels that people need to go through  
20 this coaching education because they really value trying  
21 to help create inclusive environments that help kids  
22 focus on their effort and improvement and can be set up  
23 in a way to bring out the best in any child.

24 BY ATTORNEY TRYON:

Page 199

1 for females than males, but it's not consistent, right,  
2 but females sometimes really value that --- those social  
3 aspects of the sport. Not that males don't, but maybe a  
4 slightly higher --- if we're looking at those bell  
5 curves again, they would be really close, but it's  
6 possible that for --- if we are looking at guys they  
7 might come out a little bit higher on the ego aspects of  
8 the climate and females the task.

9 BY ATTORNEY TRYON:

10 **Q. Can we look at paragraph 41 of your report,**  
11 **please?**

12 A. Yes.

13 **Q. So you say the climate of youth sports must be**  
14 **geared to include all participants, so that teams are**  
15 **more likely to help every athlete maximize their**  
16 **potential. Now, the word must is a mandatory word,**  
17 **right?**

18 A. Yeah. I think it means must in the sense that  
19 that's our aim, to maximize the potential of every  
20 athlete. If that's our aim, then it is pretty key to  
21 creating that climate.

22 **Q. So who would be the --- what entity would be the**  
23 **one to enforce that?**

24 ATTORNEY VEROFF: Objection.

Page 201

1 **Q. So what you said in Canada, they have this, who**  
2 **has this?**

3 A. I believe it kind of trickled down from the  
4 government, that they just said --- you know, in the  
5 States, in the U.S., our model is if you have a  
6 heartbeat, right, and you're willing, let's put you with  
7 a team because we just want --- want to have as many  
8 teams and neighborhoods where kids can participate. But  
9 in Canada they just set the bar higher and they said if  
10 you're going to work with kids, we want you to have some  
11 basic coaching education. And so it's just a rule  
12 across their sort of sporting government.

13 BY ATTORNEY TRYON:

14 **Q. You say sporting government. Are you saying the**  
15 **national government is doing this or some sporting**  
16 **organization? I don't know much --- anything about**  
17 **Canada as far as that is concerned.**

18 A. Yeah. You know, I would have to look at that  
19 more closely. Definitely their sporting organizations,  
20 but I'm not sure that doesn't trickle down from some of  
21 their government rules, but I won't say that for the  
22 record. For the record, I'll just say that they do  
23 require any use for a coach to have a basic introduction  
24 to coaching education, which would include some of these

Page 202

1 concepts.

2 **Q. But you're not advocating that for the United**  
3 **States, are you?**

4 A. No.

5 **Q. Okay.**

6 Let's see, so my next question is you say so  
7 that teams are more likely to help every athlete ---  
8 I'm sorry, strike that.

9 Still that first clause. The climate of youth  
10 sport must be geared to include all participants. So  
11 who gets to participate? When you say all participants  
12 what do you mean by that?

13 A. Hopefully, we have an avenue for all young  
14 people to gain some exposure to youth sport, so all  
15 athletes who want to.

16 **Q. Okay.**

17 So in some sports and high school athletes and  
18 in college you have tryouts. And if you don't make the  
19 tryouts, you don't make the team.

20 **Right?**

21 A. That's right.

22 **Q. And do you think that's okay or do you think**  
23 **that we should do away with tryouts and everybody should**  
24 **be on the team if they want to be on the team?**

Page 204

1 A. Probably so, yes.

2 **Q. So going back to cutting kids off teams, that's**  
3 **a thing where kids, if they don't perform at a certain**  
4 **level, they're cut from the team or never allowed onto**  
5 **the team, right?**

6 A. Right.

7 **Q. And so if somebody does better than you on that**  
8 **team, then you are at a disadvantage, right?**

9 ATTORNEY VEROFF: Objection.

10 BY ATTORNEY TRYON:

11 **Q. If you are cut from the team?**

12 A. Yes.

13 **Q. Now, you say from an educational standpoint it**  
14 **is optimal to encourage all athletes to do the best they**  
15 **can and to help all athletes enjoy the sport they love,**  
16 **right?**

17 A. Uh-huh (yes). Yes.

18 **Q. So when you say from an educational perspective**  
19 **let me just ask you --- do you feel like you are an**  
20 **expert on education or teaching methodology?**

21 A. It depends. When I say an educational  
22 perspective I mean from the sports psychology  
23 literature. And you know, it's not what I study in ---  
24 sorry, I'm just going to think for a second.

Page 203

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: I think there is a lot of  
3 benefits to looking at high school sports and including  
4 as many athletes as we can. But no, I wouldn't say that  
5 I'm against all --- everywhere we should have a no cut  
6 policy. But I think it's valuable to look and say, hey,  
7 are we including as many kids as we can. Because the  
8 evidence supports that kids feel more connected at  
9 school, you know, their attendance is better. There's a  
10 lot pluses when kids get that opportunity to  
11 participate.

12 BY ATTORNEY TRYON:

13 **Q. Don't sports sometimes take kids away from their**  
14 **academics?**

15 ATTORNEY VEROFF: Objection.

16 THE WITNESS: They sometimes do for some  
17 kids.

18 BY ATTORNEY TRYON:

19 **Q. For a lot of kids, isn't it?**

20 A. I'm not sure what the percentages are, but yeah,  
21 some kids may be less focused on academics.

22 **Q. And that is why a lot of schools actually have**  
23 **rules on minimum academic scores that you are getting in**  
24 **order to be on a team, right?**

Page 205

1 **Q. Take your time. I want to get an accurate**  
2 **answer from you. I'm not trying to fool you or**  
3 **anything.**

4 A. Thank you. Yeah, I think this is building on  
5 achievement goal perspective theory that just as we  
6 should be helping all kids be the best that they can be,  
7 right, and if we're not doing that, then we're more  
8 likely setting it up to just focus on those kids who we  
9 think are going to be the best and the highest  
10 achievers, but to keep the focus on helping every  
11 athlete, every student, be the best that they can be I  
12 think is really a valuable aim.

13 **Q. Do you know how many schools in West Virginia**  
14 **have sports programs?**

15 A. I do not.

16 **Q. Do you have any idea of what percentage of kids**  
17 **are in athletic programs in West Virginia schools?**

18 A. I don't.

19 **Q. Do you know about in any of the universities in**  
20 **West Virginia?**

21 A. No, I don't know.

22 **Q. Take a look at paragraph 42. Read that. I'm**  
23 **not going to read it all out loud, but I do have some**  
24 **questions for you about paragraph 42.**

1 A. Okay. Okay.

2 **Q. As far as I can tell, this paragraph has nothing**  
3 **to do with House Bill 3293, does it?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: I think it takes a bigger  
6 picture perspective of just the youth sport world, and  
7 so what's true for parents, for this parent, Jim  
8 Thompson, who had a child who experienced so much  
9 negative, you know, interactions when he first signed up  
10 for sport, that Jim Thompson was like, wow, this is  
11 crazy, and he went on to start this organization to  
12 provide coaching education for --- you know, for  
13 coaches. He has materials for parents, for officials,  
14 but you know, reading it, it makes me think it would be  
15 healthy for all of us to step back and just say, hey,  
16 let's not get too, too over crazy about this, right.  
17 And in the case of BPJ, right, how cool if we can let  
18 her have the experience of running cross-country school  
19 and wouldn't it be a shame if we just had a blanket  
20 exclusion of kids based on their gender identity.

21 BY ATTORNEY TRYON:

22 **Q. Okay.**

23 **But what does that have to do with HB-3293?**

24 ATTORNEY VEROFF: Objection.

1 THE WITNESS: You know, it's probably  
2 just a matter of how we interpret this, but if we --- if  
3 we have legislators just making a blanket decision that  
4 across our state no child in secondary education, no  
5 athletes in universities who are transathletes can  
6 participate, it feels like we are really doing a  
7 disadvantage to those athletes and not allowing them to  
8 participate and reap the benefits. And I think Jim  
9 Thompson here is just saying there is just so many  
10 benefits and what if we were all united and saying how  
11 can we come in and just make sport be all it can be.  
12 Parents play a big role in that, but they're definitely  
13 not the only party that does.

14 BY ATTORNEY TRYON:

15 **Q. Is it your position then that a child or youth,**  
16 **a young adult should be allowed to participate on**  
17 **whatever team that child identifies as being a gender**  
18 **associated with that team? That wasn't very artfully**  
19 **said, so let me try again. Is it your position that any**  
20 **child that identifies as a girl should be allowed to**  
21 **participate on a girls team or women's team as the case**  
22 **may be?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: It's my position that when

1 I look at the sport organizations across this country  
2 and internationally that sport leaders are recognizing  
3 that we want to balance fairness with inclusion and that  
4 there has been success in that already and that that is  
5 something that we can do and that we don't have to just  
6 exclude all trans athletes from participating in sport.  
7 BY ATTORNEY TRYON:

8 **Q. So you have not answered my question directly.**  
9 **Is that because you don't want to or because you don't**  
10 **feel like you can?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: I feel like it's more  
13 complex than what you're mapping it out. When we talk  
14 about transathletes and their gender identity and  
15 whether they may be transitioning and all these other  
16 factors, it's just a bigger picture than saying any male  
17 should be able to decide at any moment I want to compete  
18 as a female. No, we have to have guidelines in place  
19 that are fair and inclusive.

20 BY ATTORNEY TRYON:

21 **Q. So if we just narrowed down the statute somewhat**  
22 **to imply with your views on that, then you think it**  
23 **would be okay to exclude some transgenders ---**  
24 **transgender girls from competing on girls teams but not**

1 **all?**

2 ATTORNEY VEROFF: Objection.

3 BY ATTORNEY TRYON:

4 **Q. Is that right?**

5 A. Right. I think that's what's happening right  
6 now, right, there are like criteria within the NCAA, for  
7 example, and athletes have meet that criteria to  
8 participate as a transgender female.

9 **Q. And so a statute that did that you would find**  
10 **okay?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: I believe sport  
13 organizations and leaders are going to be able to find a  
14 way to balance inclusion and fairness, and what that may  
15 look like across sports or different levels, yeah, I'm  
16 not an expert on that and couldn't outline all that for  
17 you right now. I could just say it makes me sad when  
18 athletes are excluded and not given a chance to reap all  
19 these amazing benefits from being a part of sport.

20 BY ATTORNEY TRYON:

21 **Q. I hear you, but I still want to know if you**  
22 **believe that there's a place for the State to pass laws**  
23 **to regulate that?**

24 ATTORNEY VEROFF: Objection.

1 THE WITNESS: Yeah, I don't think the  
2 State legislators in my view are the best position. I  
3 feel like the sport organizations and sport leaders and  
4 people really invested and knowledgeable and involved in  
5 the sports at different levels should be making these  
6 calls.

7 BY ATTORNEY TRYON:

8 **Q. So you don't believe that the State should pass**  
9 **any law whatsoever regulating participation of**  
10 **transgender girls in girls sports?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: Yeah, I'm not speaking to  
13 every possible law that could ever be invented, but with  
14 regard to this House Bill, right, I think it's  
15 unfortunate to have just a blanket exclusion for  
16 transathletes, for transfemales.

17 BY ATTORNEY TRYON:

18 **Q. Fair enough. What about maybe a --- well, let**  
19 **me just ask this question. When kids are competing, is**  
20 **it their identity that's competing or is it their body**  
21 **that's competing?**

22 ATTORNEY VEROFF: Objection.

23 THE WITNESS: I'm sorry. I wouldn't even  
24 know where to begin to address that question or what

1 even ---.

2 BY ATTORNEY TRYON:

3 **Q. Let me see, you're not an expert on puberty**  
4 **blockers therapy for boys or young men who want to be on**  
5 **the girls teams, right?**

6 A. I am not.

7 **Q. And you're not an expert on testosterone**  
8 **suppression for boys or young men who wanted to be on a**  
9 **girls team, right?**

10 A. That is correct.

11 **Q. And you are not an expert on hormone therapy for**  
12 **boys or young men who want to compete on girls teams,**  
13 **right?**

14 A. That's correct.

15 **Q. Let's take a look at Exhibit-11.**

16 ATTORNEY TRYON: Jake, if you could bring  
17 that up. Excuse me, Exhibit-9. I beg your pardon. I  
18 have to relabel some of these.

19 ---

20 (Whereupon, Exhibit 9, Article on Lia  
21 Thomas, was marked for identification.)

22 ---

23 BY ATTORNEY TRYON:

24 **Q. So I'm sure you expected that I was going to ask**

1 **you some questions about Lia Thomas, didn't you?**

2 A. I didn't know what to expect, honestly.

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: I didn't know what to  
5 expect.

6 BY ATTORNEY TRYON:

7 **Q. Of course, the whole issue with Lia Thomas has**  
8 **been in the news a lot, and so I want to ask you about**  
9 **--- this is an article in Fox News. It says Penn**  
10 **Swimmer Slams School's Handling of Lia Thomas Saga.**  
11 **They Don't Actually Care about Women at All. So have**  
12 **you seen this article?**

13 A. No.

14 **Q. But you are aware of the Lia Thomas what I will**  
15 **call controversy, right?**

16 A. Yes.

17 **Q. So the first paragraph says a swimmer on**  
18 **University of Pennsylvania Women's team says she feels**  
19 **the school's decision to allow transgender swimmer Lia**  
20 **Thomas to compete has created an unfair balance within a**  
21 **sport that prioritizes Thomas's rights over that of**  
22 **biological female student athletes. A student who spoke**  
23 **to Fox New Digital on the condition of anonymity out of**  
24 **fear of retribution said she was hopeful after learning**

1 **the NCAA's decision last week to update its policies of**  
2 **allowing transgender girls to compete based on hormone**  
3 **levels. And then skipping down it says stuff like that,**  
4 **it's not just the difference between two girls and how**  
5 **one may have slightly larger lungs that gives them a**  
6 **slight advantage. These are monumental advantages that**  
7 **biological males just develop through puberty and it's**  
8 **not something that a year of hormone treatments, in**  
9 **brackets, can suppress because they still have all the**  
10 **muscle mass that they had for the last 20 years, closed**  
11 **quote. Do you believe that this swimmer is justified in**  
12 **her feelings about this being unfair?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: I believe this swimmer has  
15 the right to her opinion, for sure.

16 BY ATTORNEY TRYON:

17 **Q. Do you agree that it was unfair for Lia Thomas**  
18 **to compete with the girls on the team?**

19 ATTORNEY VEROFF: Objection.

20 THE WITNESS: The NCAA has set these  
21 standards in place and Lia Thomas followed everything,  
22 she has followed the rules and so it's really  
23 unfortunate to see how much hate and lack of respect and  
24 lack of kindness has been thrown her way. It's just

Page 214

1 really hard stuff. I understand that athletes --- this  
2 is new and I think each sport will be just looking at  
3 the criteria they use and so, you know, they may tweak  
4 some things along the way. But I don't think we can  
5 take it out on Lia Thomas who has done everything that  
6 has been asked of her.

7 BY ATTORNEY TRYON:

8 **Q. Is there anything that you are aware of --- this**  
9 **swimmer doesn't say I hate Lia Thomas. You just started**  
10 **out talking about hate. Where do you get that from?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: From everything coming from  
13 social media. And so she fears retribution and wants to  
14 stay anonymous. Lia Thomas I feel has a lot of courage  
15 to put herself out there knowing that there is going to  
16 be a lot of people unhappy and a lot of pushback and,  
17 you know, kind of couple of things that she says is just  
18 referring to be who she is, ready to compete. And so  
19 I'm acknowledging this is a really difficult situation,  
20 right, for swimmers, for her teammates, but I think in  
21 this case we have to wait to see what the NCAA and what  
22 the USA Swim group decides to do and what they decide is  
23 fair. And they have ongoing studies about how to be  
24 inclusive and yet fair, and I'm confident that we can

Page 216

1 ATTORNEY VEROFF: Objection.

2 THE WITNESS: I'd say I just recognize  
3 that you're really frustrated with this and you don't  
4 agree with it and that we --- well, I think, you know  
5 when stuff is new and we don't have a lot of experience  
6 or exposure to it, you know, that is really hard. I  
7 just reflect back to my first semester at college and I  
8 was just having lunch at a long table with lots of  
9 women, and my roommate told me afterwards that every  
10 person that we had lunch with, which was a lot, that  
11 they were all gay. And I had no idea, never --- I grew  
12 up in Texas, never talked to anybody, never knew anybody  
13 that I knew was gay, was probably just naive.

14 And so down the road now, some people  
15 that I'm closest to and love in the world are gay and it  
16 is not anything that I give any thought to. It's like,  
17 you know, crazy that is what happens over time. And I  
18 see the same thing happening with transgender athletes.  
19 We're just going to --- who would want to have the  
20 courage to come out and just put your lives out there  
21 and your family and do everything that they have to do,  
22 too, and so I think we'll all just grow and we'll learn  
23 more about what this experience is and we'll be able to  
24 see, right, that here is just another athlete like me.

Page 215

1 keep pursuing that and there may be a learning curve for  
2 us, right, or it may be that this is determined with  
3 data over time that this is exactly what the criteria  
4 needs to be.

5 BY ATTORNEY TRYON:

6 **Q. So let's turn to the third page underneath that**  
7 **picture, it says --- keep going down. I'm sorry. More**  
8 **please, below the next picture. There we go. And right**  
9 **--- so the paragraph, it says they are just proving,**  
10 **once again, that they don't actually care about women**  
11 **athletes, the swimmer said of the University of**  
12 **Pennsylvania. They said they care and that they're here**  
13 **for our emotions, but why do we have to be gracious**  
14 **losers? Who are you you to tell me that I shouldn't**  
15 **want to win because I do want to win. I'm swimming.**  
16 **I'm dedicating more than 20 hours a week to the sport.**  
17 **And obviously I want to win. You can't just tell me**  
18 **that I should be happy with second place. I'm not. And**  
19 **these people in Penn's administrative department who**  
20 **just think that women should just roll over, it's**  
21 **disturbing and it's reminiscent of the 1970s when the**  
22 **are fighting for Title 9 and stuff like that. They**  
23 **don't actually care about women at all. What would you**  
24 **say to this swimmer?**

Page 217

1 We have more in common than we don't. And I think over  
2 time a lot of views will change and we'll just keep  
3 working on trying to be as fair as we can on what the  
4 criteria should be. But with this athlete I would say  
5 nothing changes for you. What you are trying to do is  
6 be the absolute very best that you can be, right, and so  
7 let's keep working hard, let's keep seeing what you can  
8 do. In swimming, that's a nice sport to just be able to  
9 stay focused on your time and your performance and  
10 proving your technique.

11 BY ATTORNEY TRYON:

12 **Q. And so you are saying that this girl should be a**  
13 **gracious loser, period, right?**

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: No. I'm saying if that  
16 suggests that every transgender female that ever  
17 competes in sports is going to be every female, right,  
18 and that's just crazy, so --- and you know, I'm not  
19 following it that closely, but Lia Thomas has lost races  
20 as well. So just to say that she is here.

21 BY ATTORNEY TRYON:

22 **Q. Right.**

23 A. And I'm just a big loser for now because I can  
24 never, you know, beat her, no, you just go out there and

Page 218

1 compete because that's what sports is about.

2 **Q. And that --- sorry, go ahead. I thought you**  
3 **were finished.**

4 A. Sorry. It's just out of, you know, some of  
5 these rules are things that are just out of her control  
6 so she needs to stay focused on what she can focus on.

7 **Q. Is it your view that these girls that are**  
8 **objecting to Lia Thomas being on the team are doing it**  
9 **because they hate Lia Thomas?**

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: No, no, I don't know any of  
12 these athletes.

13 BY ATTORNEY TRYON:

14 **Q. Let me ask you to take a look at Exhibit-11.**  
15 **Let me know when you have it.**

16 A. Okay, I have it.

17 **Q. This is the opening paragraph and this says**  
18 **Virginia Tech, fifth year Reka Gyorgy has released a**  
19 **letter to NCAA addressing her opinion on the**  
20 **organization's controversial transgender policy which**  
21 **allowed Penn fifth year Lia Thomas to compete at the**  
22 **NCAA championships last week. And if we can turn to the**  
23 **page we can see the actual letter written by this**  
24 **swimmer. It is in italics. And let me start with the**

Page 220

1 **it a bit different and I can't help but be angry or sad.**

2 **It hurts me, my team and other women in the pool. One**  
3 **spot was taken away from a girl that got 9th in the 500**  
4 **free and didn't make it back to the A final, preventing**  
5 **her from being an all-American. Every event that**  
6 **transgender athletes competed in was one spot taken away**  
7 **from biological females throughout the meet. Do you**  
8 **disagree with Reka Gyorgy?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: I recognize that she is  
11 very frustrated and feels that this decision wasn't  
12 fair. You know, if we're looking at a bigger picture I  
13 think sport organizations at the Olympic level,  
14 international level, national level, are all invested in  
15 keeping this value of inclusion, right, and trying to  
16 balance that with fairness, and so I think it's  
17 something these organizations are really going to keep  
18 working on and that ---.

19 BY ATTORNEY TRYON:

20 **Q. Sorry. Go ahead.**

21 A. And that they are going to be able to find a  
22 good spot that is somewhere --- somewhere in a place  
23 that can be respectful, be it transfemale athletes and  
24 also the female athletes on these teams.

Page 219

1 **second paragraph. My name is Reka Gyorgy of Hungary. I**  
2 **am a 2016 Rio Olympian, represented Virginia Tech for**  
3 **the past five years, a two-time ACC champion, two time**  
4 **all-American and three-time honorable mention**  
5 **all-American. And then skipping down one paragraph she**  
6 **says, Micka, if I'm saying her name right, says I'm**  
7 **writing this letter right now in hopes that the NCAA**  
8 **will open their eyes and change these rules in the**  
9 **future. It doesn't promote our sport in a good way and**  
10 **I think it's disrespectful against the biologically**  
11 **female swimmers who are competing in the NCAA.**

12 **And then I want to skip down --- well, let's**  
13 **just continue on the next paragraph. I don't want to**  
14 **skip too much. I swam the 500 free at NCAA on**  
15 **March 17th, 2022, where I got 17th which means I didn't**  
16 **make it back to the finals and first alternate. I am a**  
17 **fifth-year senior. I have been top 16 and top 8 and I**  
18 **know how much a privilege it is to make finals at a big**  
19 **--- at a meet this big. This is my last college meet**  
20 **ever and I feel frustrated. It feels like that final**  
21 **spot was taken away from me because of the NCAA's**  
22 **decision to let someone who is not a biological female**  
23 **compete. I know you can say I had the opportunity to**  
24 **swim faster, make the top 16, but this situation makes**

Page 221

1 **Q. So you talk about a good spot. You don't know**  
2 **what that good spot is.**

3 **Is that right?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: No, I don't --- sorry,  
6 Julie, but I'm confident that there are many people  
7 looking --- spending a lot of time and trying to figure  
8 out how to answer some of these questions. In response  
9 to this athlete, she's probably knocked out a lot of  
10 other female athletes because maybe she had more  
11 advantages along the way, right. Maybe her parents were  
12 able to put her in good programs or good coaching and  
13 things like that. So you know, it's just never like a  
14 --- we like to just think what a sweet, perfect world it  
15 is where everyone has the same opportunities and, you  
16 know, there's just a lot that's not fair out there,  
17 right, across for athletes, but I think we do the best  
18 we can, which is what the NCAA has tried to do at this  
19 point. And like I said, things may be changing, yeah,  
20 but then --- but just to go back to the other side, for  
21 the answer to be a blanket exclusion of all transgender  
22 athletes at every level is not helping us move forward.

23 BY ATTORNEY TRYON:

24 **Q. But you think even Lia Thomas should have been**

Page 222

1 **allowed to participate in this swim meet, right?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: Yeah, I don't think it  
4 matters what I think because I'm just not that emersed  
5 in the sport to know everything. So whether it's ten  
6 whatever it is nanomols per liter or whether, you know,  
7 that's going to change, I don't know, but I think she  
8 --- I respect her, she did everything the sport has  
9 asked her to do. And she says she gets in the pool  
10 every day and gives it her best effort. And those are  
11 the kind of teammates I like to have, right, that are  
12 that way. So I think everybody can --- her teammates  
13 can look at this as maybe they can make each other  
14 better and grow as human beings and make the world  
15 better.

16 BY ATTORNEY TRYON:

17 **Q. So again you think Lia Thomas's teammates should**  
18 **just knuckle under and be happy about it and be**  
19 **complete, is that right?**

20 ATTORNEY VEROFF: Objection.

21 THE WITNESS: I feel sympathy and empathy  
22 for so many athletes that are dealing with difficult  
23 challenges, right, including these athletes, right, and  
24 I just acknowledge, yeah, it must be tough, right,

Page 223

1 you've just been doing your thing in your sport for a  
2 long time and then you happen to be at the center stage  
3 of some of this taking place, but, you know, it's just a  
4 lot of challenges that athletes are dealing with on many  
5 levels and so I don't think they are unique in, you  
6 know, it's not like they are the only athletes that have  
7 challenges to deal with.

8 BY ATTORNEY TRYON:

9 **Q. Do you think that --- are you equating the fact**  
10 **that this swimmer might have had some advantages in her**  
11 **life to the fact that Lia Thomas had been --- had gone**  
12 **through puberty and was maybe as much as a foot taller**  
13 **than the other swimmers, those are just the same thing?**

14 A. No.

15 ATTORNEY VEROFF: Objection.

16 THE WITNESS: I'm sorry. I'm not  
17 equating those. I'm just simply saying what I feel as  
18 the truth, that not everybody out there has all the same  
19 opportunities, right, and access and great coaching and  
20 facilities and everything else. So I think the NCAA is  
21 trying to do the best that they can and everybody is  
22 learning, right, so ---.

23 BY ATTORNEY TRYON:

24 **Q. One of the things that we are learning that**

Page 224

1 **these other girls, biological girls, are feeling very**  
2 **marginalized. Does that count for anything?**

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: I think there is a lot that  
5 our field of sports psychology can offer here in terms  
6 of helping people work through these things. But I  
7 would just go back to if we think the answer is to  
8 exclude all transgender female athletes from competing,  
9 then that's not right, and so we're going to have to  
10 maneuver this, we are all going to have to be involved  
11 in helping figure out how to move forward.

12 BY ATTORNEY TRYON:

13 **Q. Let me just be clear, HB-3293 does not exclude**  
14 **any athletes from competing in sports, does it?**

15 ATTORNEY VEROFF: Objection.

16 THE WITNESS: Okay.

17 From my perception it does because BPJ is  
18 a female and wants to compete with her female peers.

19 BY ATTORNEY TRYON:

20 **Q. Okay.**

21 A. So I don't see that as a good option for her to  
22 compete with the males.

23 **Q. What about Lia Thomas? I mean, Lia Thomas looks**  
24 **like a male?**

Page 225

1 ATTORNEY VEROFF: Objection.

2 BY ATTORNEY TRYON:

3 **Q. And couldn't he compete on the male team as he**  
4 **had been for years and then the coach on that team**  
5 **simply say, yeah, Lia Thomas now goes by she, but Lia**  
6 **Thomas is going to compete on the boys teams and you**  
7 **guys just need to respect that?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: As a cisgender female it's  
10 hard to fathom that you wake up and you just feel like  
11 you are in the wrong body, right. And the more I've  
12 read over the years and the more I've heard people share  
13 their stories, it must just be excruciatingly painful to  
14 go through life and feel like that's your situation, and  
15 so ---.

16 BY ATTORNEY TRYON:

17 **Q. Right. And nobody is disagreeing with that,**  
18 **nobody is contesting that, just the question --- the**  
19 **right question is what's fair to everyone, not just to**  
20 **the transgender person, but also to the biological**  
21 **girls.**

22 **Isn't that the question?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: Right. I think the

Page 226

question is how do we balance that inclusion and fairness.

BY ATTORNEY TRYON:

**Q. I'm almost finished. I'm going to read you a series of statements and please tell me if you agree or disagree. Either one is fine. I just want to understand your position. Or you may say I don't know. That's fine too. The first statement, there are physiological differences between natal males and natal females.**

ATTORNEY VEROFF: Objection. Apologies, objection.

THE WITNESS: True.

ATTORNEY VEROFF: Sorry to --- Mr. Tryon, are these your documents or are these statements coming from a document somewhere.

ATTORNEY TRYON: No, these are my statements.

ATTORNEY VEROFF: Thank you for the clarification.

BY ATTORNEY TRYON:

**Q. Second, there are physiological difference in natal males and natal females that result in males having a significant performance advantage over**

Page 228

**athletic events before puberty?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Disagree.

BY ATTORNEY TRYON:

**Q. Okay.**

**Number five, there is not scientific evidence that any amount or duration of cross sex hormone therapy, puberty blockers, androgen inhibitors or cross sex hormones, eliminates all physiological advantages that result in males performing better than females in nearly all athletic events?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Okay.

And I'm just going to say that is beyond my expertise and knowledge of that literature.

BY ATTORNEY TRYON:

**Q. Males who have recently --- excuse me, males who have received such therapy retain sufficient male physiological traits that enhance athletic performance vis-à-vis similarly aged females from a physiological perspective more accurately characterized as male --- agree or disagree?**

COURT REPORTER: I'm sorry, Counsel. Can you restate that question? I missed it.

Page 227

**similarly gifted age and trained females in nearly all athletic events after puberty?**

ATTORNEY VEROFF: Objection.

BY ATTORNEY TRYON:

**Q. Agree or disagree?**

ATTORNEY VEROFF: Objection.

THE WITNESS: I think there is exceptions to this, but as a general rule that is true.

BY ATTORNEY TRYON:

**Q. Number three, there are physiological differences between males and females that result in males having a significant performance advantage over similarly gifted aged and trained females in nearly all athletic events during puberty as opposed to after puberty. Do you agree or disagree?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yeah, I think it --- I think that statement somewhat depends on what we define as significant.

BY ATTORNEY TRYON:

**Q. Fair enough. Four, there are physiological differences between males and females that result in males having a significant performance advantage over similarly gifted aged and trained females in all**

Page 229

ATTORNEY TRYON: Sure.

BY ATTORNEY TRYON:

**Q. Males who have received such therapy that I mentioned in question number five retain sufficient male physiological traits that enhance athletic performance vis-a-vis similarly aged females and are thus from a physiological perspective more accurately characterized as male and not female?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Again, I would say that exceeds my expertise.

ATTORNEY TRYON: Fair enough. Let me go off the record for just a few minutes. I think I've covered everything, but I just want to make sure, and then I will turn the time over to my co-Defendants if they have any questions. So just give me five minutes to go off the record. Is that all right with everyone?

ATTORNEY VEROFF: Thank you.

THE WITNESS: Yes.

VIDEOGRAPHER: Going off the record. The time reads 4:45 p.m. Eastern Standard Time.

OFF VIDEOTAPE

---

(WHEREUPON, A SHORT BREAK WAS TAKEN.)

1 ---  
2 ON VIDEOTAPE  
3 VIDEOGRAPHER: We are back on the record.  
4 The current time is 4:53 p.m. Eastern Standard Time.  
5 ATTORNEY VEROFF: Excellent. Thank you.  
6 Mr. Tryon, in our last exchange with Professor Fry you  
7 read a series of statements and I asked you if these  
8 statements were coming from any documents. You said,  
9 no, these are my statements. And I just want to put on  
10 the record that it appears that in some of those  
11 statements you were reading from portions of the report  
12 of Doctor Brown, one of Defendant's expert witnesses.  
13 ATTORNEY TRYON: Well, in response, they  
14 were generated from that, but they are not his  
15 statements precisely, so --- and I think that I  
16 represented that correctly if you are suggesting that I  
17 misrepresented it.  
18 ATTORNEY VEROFF: Thank you.  
19 ATTORNEY TRYON: More over I don't think  
20 I need to reference the source of my questions, but I  
21 appreciate your statement.  
22 ATTORNEY VEROFF: Thank you. I was just  
23 clarifying, I thought that the answer that you gave  
24 earlier was your statements and was inaccurate, and so I

1 just wanted to clarify that for the record.  
2 ATTORNEY TRYON: Well, I believe it to be  
3 accurate, but we'll agree to disagree perhaps.  
4 BY ATTORNEY TRYON:  
5 **Q. So back to my questions, Professor Fry, it seems**  
6 **that you have a specific view about transgender girls or**  
7 **women participating on girls or women's teams.**  
8 **Is that a fair statement?**  
9 ATTORNEY VEROFF: Objection.  
10 THE WITNESS: Can you be more specific?  
11 BY ATTORNEY TRYON:  
12 **Q. So you indicated numerous times of your belief,**  
13 **generally, that trans --- that males who identify as**  
14 **females should be allowed to participate on girls teams.**  
15 **Right?**  
16 ATTORNEY VEROFF: Objection.  
17 THE WITNESS: Again, I've stated that I'm  
18 opposed to having a blanket exclusion policy for all  
19 transfemale athletes.  
20 BY ATTORNEY TRYON:  
21 **Q. When did you arrive at that position?**  
22 A. I'm not sure.  
23 **Q. Was it sometime in the past two years or**  
24 **somewhere before then?**

1 A. I'd say before then, but I'm not sure.  
2 **Q. Okay.**  
3 **Do you have any idea at all what timeframe?**  
4 ATTORNEY VEROFF: Objection. Asked and  
5 answered.  
6 THE WITNESS: I'm really not sure. You  
7 know, things just kind of blur over time.  
8 BY ATTORNEY TRYON:  
9 **Q. Sure.**  
10 A. But I'm a fan of trying to let athletes  
11 participate. So I'm not sure. I definitely learned  
12 more over the last few years and may come from a more  
13 knowledgeable position but I think it's one I felt for  
14 sometime.  
15 **Q. For more than ten years?**  
16 ATTORNEY VEROFF: Objection.  
17 THE WITNESS: You know, it's just hard to  
18 say. I don't remember this being part of the  
19 conversation so much ten years ago, so if someone had  
20 asked, yeah, I'm really not sure how to put a timeframe  
21 on it.  
22 BY ATTORNEY TRYON:  
23 **Q. Do you know when the first time is you heard of**  
24 **the idea of transgender women participating or**

1 **transgender females participating on girls sports?**  
2 A. Again, I don't know. You know, I've been  
3 attending sports psychology conferences for the last  
4 30 years, and I don't remember the first time I sat in  
5 on a session, or you know, began to learn more.  
6 **Q. Okay.**  
7 A. I really don't.  
8 **Q. Very good. What's the total compensation that**  
9 **you received or that you've charged for in this case so**  
10 **far?**  
11 A. In this case?  
12 **Q. Yes, in this case.**  
13 A. Yeah, I haven't turned in a bill, so I haven't  
14 received anything.  
15 **Q. So how much have you incurred so far as fees in**  
16 **this case?**  
17 A. Yeah, I've --- I think it's in the ballpark of  
18 eight to ten hours probably prior to today.  
19 **Q. And what is your hourly rate?**  
20 A. \$250.  
21 **Q. And how about in the other three cases combined,**  
22 **how much have you --- how many hours have you expended?**  
23 A. Probably eight to ten hours for the Connecticut  
24 and Idaho cases together.

**Q. And Florida?**

A. In Florida, four.

**Q. So when you first ---?**

A. Sorry.

**Q. Sorry, go ahead.**

A. Four to six, and I billed for four, though, so I received a thousand for Florida --- in the Florida case.

**Q. Do I understand correctly then that the first report that you did was for Connecticut?**

A. We started that one and then there was --- that's when COVID hit and the season was on hold. I would have to go back and look. But I think the first one that was filed ended up being Idaho even though we started on Connecticut --- or I was part of the Connecticut one.

**Q. And you believe you are able to put this whole report together in eight to ten hours for Connecticut?**

ATTORNEY VEROFF: Objection.

THE WITNESS: Yes.

BY ATTORNEY TRYON:

**Q. And your billing rate is the same for all of them?**

A. That's correct.

ATTORNEY TRYON: I don't have any further

**what is your favorite barbecue place in Memphis? That's the real question.**

A. I guess I'd have to go with the Rendezvous. My husband and I had our first date there. That was kind of special.

**Q. Well, I'm from there originally, so that's why I asked.**

A. Where are you from?

**Q. I'm from Memphis, the Memphis area originally.**

A. Okay.

**Q. I'm more partial to central barbecue places, but they're all good. So anyway, I want to turn a little bit to paragraph 38 of your expert report. It is Exhibit 2 there. And I want to turn you more toward the end of that paragraph where it says when athletes are excluded from participating in the sport or in a climate where they do not feel accepted or respected, they do not have the opportunity to reap these benefits. Now, what benefits are you talking about there?**

A. The benefits of participating in sport and to --- yeah, sorry, let me read this one more time, this paragraph, please.

**Q. Absolutely.**

A. Yeah, so I was referring to the benefits

questions. And so thank you for your time. It is always stressful and so I appreciate it. I recognize that it was stressful and that I do appreciate your patience and your time. Thanks?

THE WITNESS: Thank you. Thanks very much.

ATTORNEY SCRUGGS: I guess I will jump in since none of the other Defendants want to.

ATTORNEY TRYON: Go ahead.

ATTORNEY SCRUGGS: Okay.

---

EXAMINATION

---

BY ATTORNEY SCRUGGS:

**Q. Hello, Doctor Fry. How are you doing? Can you hear me okay?**

A. I can. Doing well. Thank you.

**Q. So my name is Johnathan Scruggs. I'm an attorney for the intervening Defendant, Lainey Armistead, in this case. So I'm just going to ask you a few questions. The good news is I won't ask many questions as the prior testimony, and I can't since we are limited in time. So I will try to go quick. But the most important question actually I have for you is**

highlighted throughout this statement that come from having a chance to participate in a really positive climate. But in this particular paragraph saying that there's some advantages to females who are able to participate, right, and might be more likely to go on to college and those things.

**Q. Let's just talk generally real quick. Can you outline, kind of, just as general benefit beyond that one specific one you mentioned?**

ATTORNEY VEROFF: Objection. Asked and answered.

BY ATTORNEY SCRUGGS:

**Q. You can answer the question.**

A. Okay. Well, throughout the statement these benefits of being able to participate in sport, you know, in a caring climate that, you know, people can have fun, can have good experiences and good relationships with coaches and athletes. They can have --- just reap the physical benefits of being in better health and --- both psychologically and physically. They can express greater empathy for others, and you know, better sportspersonship, right, really evaluate being a respectful competitor and things like that.

**Q. Now, in your last sentence in paragraph 38, you**

1 **don't have a timeframe mentioned in terms of when**  
 2 **athletes are excluded from participating in sports they**  
 3 **don't have the opportunity to reap these benefits. Do**  
 4 **you mean when they don't have an opportunity for a**  
 5 **substantial period of time or any type of loss of**  
 6 **participation for any period of time?**

7 A. So when athletes are excluded from sport --- I'm  
 8 not sure I'm following you, but if they were excluded  
 9 for a day or two, are you saying would that be a big  
 10 deal or are they excluded for a whole season or  
 11 they ---?

12 **Q. Sure. Sure. I'm just wondering if you can put**  
 13 **that in a timeframe?**

14 A. No, but I would grant that if they're excluded  
 15 for a day or something like that, we wouldn't be here  
 16 talking about it probably, but yeah, on a bigger scale.

17 **Q. But you would agree that if students were**  
 18 **excluded from participating in high school sports for**  
 19 **four years, they would miss out on the opportunities for**  
 20 **participating in youth sports?**

21 A. Yes.

22 **Q. And I assume the same is for a year.**

23 **Correct?**

24 A. Yes.

1 **Q. Let's say there's a policy as far as males with**  
 2 **female gender identities to undergo testosterone**  
 3 **suppression for a year before they can participate on**  
 4 **the girl's team, would that policy force at least some**  
 5 **athletes to miss out on some opportunities associated**  
 6 **with youth sports?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: It could.

9 BY ATTORNEY SCRUGGS:

10 **Q. Well, could you envision where it wouldn't?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: I'm just thinking they  
 13 might have other options or could play on a co-gender  
 14 team that's maybe not part of their school, what they  
 15 really wanted to do was on their school, but there could  
 16 be another possibility.

17 BY ATTORNEY SCRUGGS:

18 **Q. Yeah, so being a situation where they only**  
 19 **wanted to be on their school and had to undergo**  
 20 **testosterone suppression for a year to do so, they would**  
 21 **lose out on those benefits for that year.**

22 **Correct?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: Uh-huh (yes).

1 BY ATTORNEY SCRUGGS:

2 **Q. Now, earlier we discussed HB-3293 the law that**  
 3 **is at issue in the case. Now, I don't want to retread a**  
 4 **lot of old ground, but I just want to put it in your**  
 5 **words. So what is the problem, in your opinion, with**  
 6 **this law?**

7 ATTORNEY VEROFF: Objection as to scope.

8 THE WITNESS: I think it's --- you know,  
 9 provides a blanket of exclusion of transgender female  
 10 athletes from participating in the secondary and college  
 11 level, and that is unfortunate and harmful.

12 BY ATTORNEY SCRUGGS:

13 **Q. Ma'am, I'm sorry your answer broke up there. I**  
 14 **think my internet connection was a bit faulty. Can I**  
 15 **ask the court reporter to read back that answer?**

16 ---

17 (WHEREUPON, COURT REPORTER READS BACK PREVIOUS ANSWER)

18 ---

19 BY ATTORNEY SCRUGGS:

20 **Q. And how harmful exactly?**

21 ATTORNEY VEROFF: Objection.

22 THE WITNESS: It is harmful, because I  
 23 think what school districts are trying to do is help  
 24 every child reach their own potential and bring out

1 their best and but we have these activities available  
 2 but we are telling a particular group of kids that you  
 3 can't participate in these activities and these maybe  
 4 very important to them and be extremely valuable part of  
 5 their educational experience through the secondary  
 6 schools.

7 BY ATTORNEY SCRUGGS:

8 **Q. Got it. Got it. And now earlier in your**  
 9 **testimony you mentioned you didn't think it's a problem**  
 10 **if a male --- that would be a male that was excluded**  
 11 **from, for example, the women's girl track team.**

12 **Do you remember that?**

13 ATTORNEY VEROFF: Objection.

14 THE WITNESS: I'm sorry, did you say a  
 15 male who identifies as a male?

16 BY ATTORNEY SCRUGGS:

17 **Q. Yes, yes. From the women's sports team?**

18 A. Right. The team for the females is for the  
 19 females, right, so I would agree.

20 **Q. So you don't think HB-3293 is not problematic in**  
 21 **that situation?**

22 ATTORNEY VEROFF: Objection.

23 THE WITNESS: Right.

24 BY ATTORNEY SCRUGGS:

Page 242

1 **Q. And that's true even if that male loses out on**  
 2 **an opportunity from participating on the girl's track**  
 3 **team?**

4 ATTORNEY VEROFF: Objection.

5 THE WITNESS: Right. Right. But they're  
 6 identifying as a male and can perform on a --- can  
 7 participate on the male's team.

8 BY ATTORNEY SCRUGGS:

9 **Q. So they can participate on the male's team and**  
 10 **that is why they talk about it?**

11 ATTORNEY VEROFF: Objection.

12 THE WITNESS: Right.

13 BY ATTORNEY SCRUGGS:

14 **Q. What if that male athlete is not fast enough to**  
 15 **run on the male team?**

16 ATTORNEY VEROFF: Objection.

17 THE WITNESS: In say cross-country  
 18 or ---?

19 BY ATTORNEY SCRUGGS:

20 **Q. Yes. On cross country is not fast enough for**  
 21 **the male team, cannot run on the male team, should that**  
 22 **male at least be able to participate on the female track**  
 23 **team?**

24 ATTORNEY VEROFF: Objection.

Page 244

1 **participate on the female track team?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: No. Sorry. No. No, I  
 4 don't think so.

5 BY ATTORNEY SCRUGGS:

6 **Q. Well, why doesn't --- why shouldn't we value**  
 7 **their participation on an athletic team?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: I don't think we're saying  
 10 we wouldn't value that, right. That happens all the  
 11 time.

12 BY ATTORNEY SCRUGGS:

13 **Q. Yeah. I'm saying why don't we value --- why**  
 14 **don't we promote their participation in athletics and**  
 15 **allow them to participate on the female track team?**

16 ATTORNEY VEROFF: Objection. And please  
 17 let the witness finish her answer.

18 THE WITNESS: I think there's a team for  
 19 this male athlete to at least try out for and go for and  
 20 so I don't see the issue that we're not being inclusive  
 21 and giving this athlete an opportunity to try out for  
 22 that team. Across teams and across schools, many  
 23 athletes try out for sports and don't make the team.  
 24 BY ATTORNEY SCRUGGS:

Page 243

1 THE WITNESS: Right, no, no. No people  
 2 at tryouts do not make teams. But he is a male,  
 3 identifying as a male then he should stick with that  
 4 team.

5 BY ATTORNEY SCRUGGS:

6 **Q. So in that situation, it doesn't matter, that**  
 7 **male athlete doesn't have another option?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: Right.

10 BY ATTORNEY SCRUGGS:

11 **Q. Okay.**

12 **Wouldn't it be more inclusive to allow the man**  
 13 **to participate on the female track team?**

14 ATTORNEY VEROFF: Objection.

15 THE WITNESS: I don't see it like that,  
 16 right. There's a male track team and a male can try out  
 17 for the that. And the good news is with cross-country  
 18 they can handle a lot of athletes so often there is not  
 19 a cut policy in cross-country.

20 BY ATTORNEY SCRUGGS:

21 **Q. Well, I think I can easily give a scenario where**  
 22 **the male can't make the male track team, but there is an**  
 23 **open slot on the female track team, so that males who**  
 24 **identify as males, should that person be able to**

Page 245

1 **Q. Well, BPJ can try out for the male track team.**  
 2 **Correct?**

3 ATTORNEY VEROFF: Objection.

4 THE WITNESS: That doesn't seem to be a  
 5 viable option since BPJ is a female.

6 BY ATTORNEY SCRUGGS:

7 **Q. Gotcha. Okay. Let me turn you toward**  
 8 **paragraph 37 in your expert report, again I'm going to**  
 9 **ask you about the second question --- the second -- or**  
 10 **the last sentence, excuse me, there, where it says if**  
 11 **transgender students are arbitrarily excluded from these**  
 12 **sports they are in turn deprived of this positive**  
 13 **experience as an outcome and their teammates are**  
 14 **deprived of a generally optimal sport experience. Did I**  
 15 **read that correctly?**

16 A. Yes, I think so.

17 **Q. Now, would you agree that if we just said any**  
 18 **student is excluded from youth sports, they are deprived**  
 19 **of those positive experiences and outcomes and their**  
 20 **teammates are deprived of a generally optimal sports**  
 21 **experience?**

22 A. Yeah, I'm not thinking of a situation where that  
 23 is not the case right now.

24 **Q. So would you agree that if it said if any**

1 **student, no matter their gender identity, were**  
 2 **arbitrarily excluded from youth sports, they are**  
 3 **deprived of those positive experiences and outcomes?**

4 A. I would just add that based on their gender  
 5 identity, right. So you could have a trans female  
 6 athlete who tries out for a team and doesn't make it,  
 7 right, we're not including that in the same ballpark  
 8 here with just having a blanket statement that  
 9 transfemale athletes may not participate.

10 **Q. I guess I'm not really following you. But**  
 11 **again, you would agree that if any students are**  
 12 **arbitrarily excluded, they reap the benefits from youth**  
 13 **sports?**

14 ATTORNEY VEROFF: Objection. Asked and  
 15 answered.

16 THE WITNESS: No, I wouldn't agree with  
 17 that. I would need the context of that because the  
 18 example I'm giving is transgender female athlete tries  
 19 out for a female team and doesn't make it, right, and so  
 20 would be excluded for that reason, that they're --- this  
 21 team is limited in how many positions they have and they  
 22 --- particular, you know, some kids try and don't make  
 23 the team.

24 BY ATTORNEY SCRUGGS:

1 ATTORNEY VEROFF: Objection. Asked and  
 2 answered.

3 THE WITNESS: Yes, I think it changes the  
 4 meaning to say if any athletes, any athlete under any  
 5 circumstances, but I just mean --- athletes here.

6 BY ATTORNEY SCRUGGS:

7 **Q. Yeah, I'm not saying under any circumstances. I**  
 8 **guess what I'm trying to figure out is what role does an**  
 9 **athlete's gender identity play in that sentence. It**  
 10 **says if athletes were arbitrarily excluded, so I assume**  
 11 **there could be a male athlete who identifies as male.**  
 12 **If that athlete is arbitrarily excluded, that creates a**  
 13 **problem that you identify in that paragraph?**

14 A. I'm not familiar with --- sorry, Julie.

15 ATTORNEY VEROFF: Objection.

16 THE WITNESS: I'm not familiar with that  
 17 case where the male athlete is arbitrarily prevented  
 18 from participating. I'm not sure what you're referring  
 19 to there.

20 BY ATTORNEY SCRUGGS:

21 **Q. Well, let's think about a situation on the**  
 22 **sports team where a coach cuts an athlete, a female**  
 23 **athlete who identifies as female and instead it favors**  
 24 **the coach's own daughter, for example. You would**

1 **Q. Let me turn you to your Declaration, your**  
 2 **initial expert Declaration, I think it's Exhibit 1, and**  
 3 **then let me turn you to paragraph 44 and just read the**  
 4 **second sentence, which says, if athletes are arbitrarily**  
 5 **excluded from youth sports, they are, in turn, deprived**  
 6 **of those positive experiences and outcomes and their**  
 7 **teammates are deprived of a generally task involving and**  
 8 **caring sports climate. Do you see that?**

9 A. I do.

10 **Q. And are you referring to all athletes there?**

11 A. I think the point is arbitrarily there.

12 **Q. Uh-huh (yes).**

13 A. Right, then --- so if we're just saying we  
 14 should have a cut policy because that's not fair, right,  
 15 that's not what I'm insinuating here, right, just saying  
 16 but to have this --- make this decision that as a  
 17 blanket statement that certain group of athletes can't  
 18 participate, can't try out, can't participate, then,  
 19 yes, I think the statement is true.

20 **Q. Yes, I think we are saying the same thing. Let**  
 21 **me ask it another way. Again, focusing on the**  
 22 **arbitrarily, if all athletes --- if any athlete is**  
 23 **arbitrarily excluded, that creates a problem in your**  
 24 **mind?**

1 **consider that an arbitrary exclusion, right?**

2 ATTORNEY VEROFF: Objection.

3 THE WITNESS: No. We'd have to know a  
 4 whole lot more about that situation.

5 BY ATTORNEY SCRUGGS:

6 **Q. Okay.**

7 A. Maybe the coach's daughter deserves to be on  
 8 the team and if the team can only handle so many maybe  
 9 that's how it had to be. But to make the assumption  
 10 that because it was the coach's daughter that it wasn't  
 11 a fair process ---.

12 **Q. I'm assuming that was the only reason that the**  
 13 **athletes have been chosen and someone else is excluded?**

14 A. In other words, if a coach just says I don't  
 15 like you, I don't want you on my team.

16 **Q. Exactly.**

17 A. It seems like there would be guidelines in place  
 18 for someone to appeal that to the Athletic Director and  
 19 so on, and yeah, that doesn't sound like it'd be very  
 20 fair to not give someone a chance.

21 **Q. Exactly. And that kind of principle applies**  
 22 **regardless of someone's gender identity?**

23 ATTORNEY VEROFF: Objection.

24 THE WITNESS: Okay. Yeah. If I'm

1 following you, yes, I think.

2 BY ATTORNEY SCRUGGS:

3 **Q. Yeah. Now, switching gears slightly, you**  
 4 **mentioned --- to go back --- let's go back actually to**  
 5 **your expert report, paragraph 37. And again, that last**  
 6 **sentence that transgender students are arbitrarily**  
 7 **excluded, what is the situation when a transgender**  
 8 **student is not arbitrarily excluded from youth sports**  
 9 **--- or let me strike that. Let me rephrase.**

10 **What is a situation, to use your term,**  
 11 **transgender student doesn't make the sports team and**  
 12 **that's not arbitrary? Did you hear that question?**

13 A. Sorry, I thought the court reporter was asking  
 14 for it to be repeated or something.

15 **Q. No. I'm sorry.**

16 A. No, that's okay. I lost something, okay. So  
 17 you're saying, for example, a transfemale athlete tries  
 18 out for a female athletic team and doesn't make it?.

19 **Q. I'm asking is that an example of a non-arbitrary**  
 20 **exclusion?**

21 A. Yes. In general, I would say, yes, without  
 22 having more details, all right, but it doesn't ---  
 23 transathletes, right, would just have the right to try  
 24 out, the right to, you know, potentially participate,

1 THE WITNESS: Right. Inherent within  
 2 sports, unfortunately, particularly at the secondary  
 3 level, is that not all schools are in a position to let  
 4 every child participant who wants to, right, and so  
 5 there is a cut policy. Personally, because of  
 6 everything I've outlined today, I wish every school  
 7 district was doing everything possible to include as  
 8 many kids, as many athletes as they could, right, but  
 9 that's not the reality. Boys and girls try out for  
 10 teams and they get --- you know, they don't make it. I  
 11 just saw this clip this weekend, Billy Mills, Olympic  
 12 gold medalist, right, he was cut from his track team as  
 13 a freshman, right. So that happens. And I'm  
 14 distinguishing that from just arbitrarily saying this  
 15 whole group of athletes, you don't have the right to  
 16 even try out for the team.

17 BY ATTORNEY SCRUGGS:

18 **Q. But in terms of taking advantage of the benefits**  
 19 **associated with sports, it's not so much why someone is**  
 20 **excluded but just the fact that they are excluded?**

21 ATTORNEY VEROFF: Objection, asked and  
 22 answered.

23 THE WITNESS: I would say it's important  
 24 to consider why they are excluded.

1 but it doesn't mean that everyone would make the team.

2 **Q. Got it. So that situation where you have the**  
 3 **male athlete who identifies as female, right, and just**  
 4 **doesn't make the team, do they lose out on the**  
 5 **experiences and opportunities associated with**  
 6 **participating in sports?**

7 ATTORNEY VEROFF: Objection.

8 THE WITNESS: Yeah, it depends. You  
 9 know, some might participate in another sport, right, or  
 10 find another avenue, but the potential is there for  
 11 that, yeah.

12 BY ATTORNEY SCRUGGS:

13 **Q. So in a situation where there is no other**  
 14 **opportunity or avenue, but we are saying that athlete**  
 15 **just can't make that team because they just don't have**  
 16 **that athletic skill, in that situation they would lose**  
 17 **out on the opportunity outcomes associated with**  
 18 **participating on that team?**

19 ATTORNEY VEROFF: Objection.

20 BY ATTORNEY SCRUGGS

21 **Q. So the word arbitrary doesn't really determine**  
 22 **whether someone benefits from the experience and**  
 23 **outcomes of participating in youth sports?**

24 ATTORNEY VEROFF: Objection.

1 BY ATTORNEY SCRUGGS:

2 **Q. Okay.**

3 **And why is that important?**

4 A. Because I believe it's harmful to just have a  
 5 blanket exclusion of a group of athletes like  
 6 transathletes to say you don't have the right to  
 7 participate in your school activities, to try out,  
 8 right, and to be part of these teams and activities.

9 **Q. Well, I'm asking with respect to your expertise**  
 10 **about benefiting from the outcome and advantages of**  
 11 **participating in sports. It seems to me that any type**  
 12 **of exclusion from sports was by definition maybe cannot**  
 13 **take advantage of this opportunity to benefit. Isn't**  
 14 **that correct?**

15 ATTORNEY VEROFF: Objection. Asked and  
 16 answered.

17 THE WITNESS: No. I'm speaking  
 18 specifically about sport because that's what's on the  
 19 table in this case, but you know, somebody else might  
 20 really experience a caring task involving climate and  
 21 have great opportunities in other activities of school  
 22 that they're passionate about, like school or music,  
 23 right. But if like BPJ, if her passion is sport,  
 24 wanting to run track, right, then --- and there's just a

Page 254

1 blanket statement saying you're not --- you can't, you  
2 can't try out for the women's track team, right, then  
3 that would prevent her from the potential benefits that  
4 she could be reaping, right, and just enhancing her  
5 school experience.

6 **Q. Got it. Like the male that identifies as male  
7 and can't participate on either the males sports team or  
8 the female sports team?**

9 ATTORNEY VEROFF: Objection.

10 THE WITNESS: Right. The distinction is  
11 that he can participate on the male team. He can try  
12 out, right, just like the transgender female can try out  
13 for the women's team, but there's no guarantee that the  
14 athletes make the team.

15 BY ATTORNEY SCRUGGS:

16 **Q. Exactly. So I mentioned to you that I represent  
17 Lainey Armistead. And I will represent to you that she  
18 is a female soccer player on the West Virginia State  
19 University soccer team. Now, I think earlier you  
20 mentioned that you reviewed some documents in the case.  
21 Did you happen to run across any documents mentioning  
22 Ms. Armistead?**

23 A. Yes, I read her statement. It's been a little  
24 bit of time, so I might need to be refreshed on it, but

Page 256

1 consider youth sport through high school and we would  
2 separate that from collegiate sport.

3 BY ATTORNEY SCRUGGS:

4 **Q. Do you think it would be wrong to say that we  
5 should not --- you know, strike that.**

6 **Do you think that we shouldn't gear athletic or  
7 college sports to include all participants?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: You know, at a place like  
10 the University of Kansas where I am, we have different  
11 levels and so you have the D-1 sport, right, and then  
12 you have club sport where people who don't have the  
13 skill level or the experience to play a D-1 sport can  
14 try out for the club sport those --- I think there's  
15 like 40 teams or maybe more we have, and the skill level  
16 among those sport club teams really varies, right. You  
17 got some, that are not hit and giggle, you know, just  
18 everyone's welcome and they don't have --- you know, a  
19 cut policy. Others are pretty competitive and maybe  
20 competing at national levels.

21 But you have another level of intermural  
22 that is open to every student on campus can sign up,  
23 because they want to play whatever it is basketball or  
24 indoor soccer or something. So I think ideally, you

Page 255

1 I did take a look at that.

2 **Q. Okay.**

3 **Well, let me go to Exhibit --- paragraph 41 of  
4 your expert report.**

5 VIDEOGRAPHER: What number did you say,  
6 Counsel?

7 ATTORNEY SCRUGGS: Paragraph 41.

8 VIDEOGRAPHER: Thank you.

9 BY ATTORNEY SCRUGGS:

10 **Q. And it says the climate of youth sport must be  
11 geared to include all participants so the teams are more  
12 likely to help every athlete maximize their potential.  
13 From an educational perspective it is optimal to  
14 encourage all athletes to do the best they can and to  
15 help all athletes enjoy the sport that they love.**

16 **Did I read that correctly?**

17 A. Yes.

18 **Q. So I assume that would include Ms. Armistead in  
19 your opinion.**

20 **Correct?**

21 ATTORNEY VEROFF: Objection.

22 THE WITNESS: I think some of the ideas  
23 hold, but you know, we were referring here to the  
24 climate of youth sport. Typically in our field we

Page 257

1 know, universities should offer lots of opportunities  
2 for people to participate in sport.

3 It is not realistic that every student on  
4 campus could participate in you know D-1 sport or  
5 whatever the level, you know, a school might have.

6 BY ATTORNEY SCRUGGS:

7 **Q. So Doctor, if we had a male that identifies as  
8 female, it wouldn't be problematic to exclude that  
9 person from the female collegiate track team?**

10 ATTORNEY VEROFF: Objection.

11 THE WITNESS: I think it depends on what  
12 the rules are in place, but if this transgender female  
13 meets the criteria and participates, right, that that is  
14 great.

15 BY ATTORNEY SCRUGGS:

16 **Q. Well, again, assuming the rules are --- the  
17 rules of West Virginia are in place and says we now  
18 require all natal males to participate on the male team  
19 rather than on the female team, why can't we just tell  
20 the male college athletes to identify as females, they  
21 can go play on the club sports club team?**

22 ATTORNEY VEROFF: Objection.

23 THE WITNESS: I think the transgender  
24 female athlete should have the right to participate on

1 whichever of those levels that they want to participate  
2 on. Right. The female D-1 team the sports team, the  
3 intermural team, they should have the right to try out  
4 as long as they meet the criteria that's in place.

5 BY ATTORNEY SCRUGGS:

6 **Q. Do you feel that Ms. Armistead should have the**  
7 **right to participate on the female women's soccer team?**

8 ATTORNEY VEROFF: Objection.

9 THE WITNESS: Yes.

10 BY ATTORNEY SCRUGGS:

11 **Q. Doctor Fry, you would agree that if Ms.**  
12 **Armistead lost her spot on the soccer team to a male**  
13 **soccer play who identifies as female, Ms. Armistead**  
14 **would be deprived of the positive experiences associated**  
15 **with participating on that soccer team?**

16 ATTORNEY VEROFF: Objection.

17 THE WITNESS: Right. If the transgender  
18 female is meeting the criteria that's in place by the  
19 NCAA, right, and then --- and makes the team and someone  
20 else doesn't make the team, right, I would say that's  
21 --- that's part of sport just like Ms. Armistead, I  
22 think, right, if she tried out and she didn't make the  
23 team because there's other cisfemale athletes that had a  
24 better performance or made the team, but either way she

1 would be missing out on the benefits if she didn't make  
2 the team.

3 BY ATTORNEY SCRUGGS:

4 **Q. And that's not my point. I understand your**  
5 **argument. I understand that, as a matter of fact, she**  
6 **would lose out on the benefits and opportunities for**  
7 **participating on the sports team.**

8 ATTORNEY VEROFF: I'm going to object to  
9 Counsel testifying.

10 BY ATTORNEY SCRUGGS:

11 **Q. I'm asking if you agree with that?**

12 ATTORNEY VEROFF: Objection to the  
13 question.

14 THE WITNESS: Yeah, I'm agreeing that  
15 athletes try out for teams, and when they don't make it,  
16 it's hard for them to reap the benefits of being part of  
17 their team if they, you know, don't participate and  
18 aren't part of that.

19 ATTORNEY SCRUGGS: I understand. I have  
20 no further questions. Thank you, Dr. Fry.

21 ATTORNEY CROPP: This is Jeffrey Cropp,  
22 Counsel for Defendant Harrison County Board of  
23 Education, and Superintendent Dora Stutler. I have no  
24 questions.

1 ATTORNEY GREEN: This is Roberta Green on  
2 behalf of West Virginia Secondary School Activities  
3 Commission. I have no questions.

4 ATTORNEY MORGAN: This is Kelly Morgan on  
5 behalf of the West Virginia Board of Education and  
6 Superintendent Burch. I have no questions.

7 ATTORNEY TRYON: And this is Dave Tryon.  
8 I have no further questions, unless the Defense Counsel  
9 does. Excuse me, Plaintiff's Counsel.

10 ATTORNEY VEROFF: No, we don't have any  
11 further questions. The witness will read and sign  
12 later.

13 VIDEOGRAPHER: Okay.

14 If there's no further questions that  
15 concludes this deposition. The current time reads  
16 5:38 p.m. Eastern Standard Time.

1 COMMONWEALTH OF PENNSYLVANIA)  
2 COUNTY OF PHILADELPHIA )  
3 CERTIFICATE

4 I, Nicole Montagano, a Notary Public in and  
5 for the Commonwealth of Pennsylvania, do hereby certify:

6 That the foregoing proceedings, deposition  
7 of Mary D. Fry, Ph.D., was reported by me on March 29,  
8 2022 and that I, Nicole Montagano, read this transcript,  
9 and that I attest that this transcript is a true and  
10 accurate record of the proceeding.

11 That the witness was first duly sworn to  
12 testify to the truth, the whole truth, and nothing but  
13 the truth and that the foregoing deposition was taken at  
14 the time and place stated herein.

15 I further certify that I am not a relative,  
16 employee or attorney of any of the parties, nor a  
17 relative or employee of counsel, and that I am in no way  
18 interested directly or indirectly in this action.

19 Dated the 4 day of April, 2022

20 *Nicole Montagano*

And Doctor Safer, I will ask you questions if</b></p> <p>11 <b>you go about your expert reports but let me ask you now</b></p> <p>12 <b>to focus your attention on Exhibit Number 3. Am I right</b></p> <p>13 <b>that this is an article that you have just very recently</b></p> <p>14 <b>published?</b></p> <p>15 A. Yes.</p> <p>16 <b>Q. When did this come out?</b></p> <p>17 A. This came out within the past few weeks I think.</p> <p>18 <b>Q. And this is not a recording of the original</b></p> <p>19 <b>research. This is a two page piece simply explaining</b></p> <p>20 <b>current issues to the readership of this journal?</b></p> <p>21 ATTORNEY BLOCK: Objection to form.</p> <p>22 THE WITNESS: So this is not original</p> <p>23 research, that's correct.</p> <p>24 ATTORNEY BROOKS: Thank you.</p>                                                                                 |
| <p style="text-align: right;">Page 15</p> <p>1 BY ATTORNEY BROOKS:</p> <p>2 <b>Q. Doctor Safer, good morning. I want to first put</b></p> <p>3 <b>in front of you your expert report and your rebuttal</b></p> <p>4 <b>report so that you have those if at any point you want</b></p> <p>5 <b>to refer to them. It looks --- for convenience let's</b></p> <p>6 <b>mark those as Exhibit 1 and 2 for the deposition.</b></p> <p>7 ATTORNEY TRYON: Roger, one moment. I'm</p> <p>8 looking at the realtime, and it's recording you as</p> <p>9 Attorney Capehart. So I don't know if that needs to be</p> <p>10 corrected now. And it's showing me as Attorney</p> <p>11 Hartnett.</p> <p>12 ATTORNEY BROOKS: She will get that fixed</p> <p>13 and the record will be correct.</p> <p>14 ATTORNEY TRYON: Okay.</p> <p>15 ---</p> <p>16 (Whereupon, Exhibit 1, Report of Dr. Safer,</p> <p>17 was marked for identification.)</p> <p>18 (Whereupon, Exhibit 2, Rebuttal Report of</p> <p>19 Dr. Safer, was marked for identification.)</p> <p>20 ---</p> <p>21 ATTORNEY BROOKS: And at the moment I'm</p> <p>22 handing copies to the witness. And I would like to mark</p> <p>23 as Safer Exhibit 3 a short article entitled Fairness for</p> <p>24 Transgender People in Sport by Joshua Safer.</p> | <p style="text-align: right;">Page 17</p> <p>1 BY ATTORNEY BROOKS:</p> <p>2 <b>Q. How would you describe the purpose of this</b></p> <p>3 <b>article?</b></p> <p>4 A. The purpose of this article is to educate</p> <p>5 endocrinologists, frame the issues and also serves a bit</p> <p>6 as a charge to endocrinologists in terms of work that</p> <p>7 needs to be done.</p> <p>8 <b>Q. Thank you. If you look at the first column of</b></p> <p>9 <b>the first page, in the third paragraph you will see it</b></p> <p>10 <b>begins a possible tension exists because of the</b></p> <p>11 <b>observation that on average cisgender boys and men have</b></p> <p>12 <b>better performance outcomes in athletics than do</b></p> <p>13 <b>cisgender girls and women. Do you see that language?</b></p> <p>14 A. I do.</p> <p>15 <b>Q. And you are referring there to the general</b></p> <p>16 <b>observation that natal males have better average</b></p> <p>17 <b>athletic performance than natal females in a variety of</b></p> <p>18 <b>measures.</b></p> <p>19 <b>Correct?</b></p> <p>20 ATTORNEY BLOCK: Objection to form.</p> <p>21 THE WITNESS: So I guess I need to be</p> <p>22 more specific or I can clarify.</p> <p>23 BY ATTORNEY BROOKS:</p> <p>24 <b>Q. If you would be more specific.</b></p> |

1 A. So cisgender men at a certain age have better  
2 sports outcomes than cisgender women.

3 **Q. But you wrote in this just published article**  
4 **that cisgender boys and men have better performance**  
5 **outcomes than the cisgender girls and women.**

6 **Correct?**

7 A. That is correct.

8 **Q. And what did you mean in that statement by your**  
9 **reference to boys and girls?**

10 A. Boys and girls who are basically --- it depends,  
11 it's context I guess. So boys and girls who are  
12 developed to that point.

13 **Q. So those --- what you had in mind are boys and**  
14 **girls, once the puberty process begins in males in**  
15 **particular?**

16 ATTORNEY BLOCK: Objection to form.

17 THE WITNESS: Yes, I guess I would say  
18 that what we know is what is towards the end of puberty  
19 and subsequent development beyond puberty.

20 BY ATTORNEY BROOKS:

21 **Q. You say in the next sentence --- well, let me**  
22 **just clarify, you accept as a scientific fact the**  
23 **general observation that, on average, boys and men,**  
24 **defining boys as you just did, have significantly**

1 **stronger athletic performance in a variety of metrics**  
2 **than girls and women as you just defined girls; correct?**

3 ATTORNEY BLOCK: Objection to form.

4 THE WITNESS: So I guess how I would say  
5 that is I accept as fact that men and boys who are  
6 appropriately developed have, yeah, have had performance  
7 outcomes in certain sports than do cisgender women and  
8 cisgender girls again appropriately developed.

9 BY ATTORNEY BROOKS:

10 **Q. And the next sentence reads the performance**  
11 **difference has resulted in the establishment of female**  
12 **only divisions for sport participation for girls and**  
13 **women and safely compete in the live events, closed**  
14 **quote. Do you see that language?**

15 A. I do.

16 **Q. And there you were, am I correct, explaining the**  
17 **relationship of your observation about male performance**  
18 **with the existence in our society of sex-separated**  
19 **sports.**

20 **Correct?**

21 ATTORNEY BLOCK: Objection to form.

22 THE WITNESS: So I guess --- I would  
23 think the way I would say it myself is this is a ---  
24 this is the reason why we have the carve-out for the

1 female category.

2 BY ATTORNEY BROOKS:

3 **Q. And one reason is to give cisgender girls and**  
4 **women an opportunity to, quote, reliably win events.**

5 **Correct?**

6 ATTORNEY BLOCK: Objection.

7 COURT REPORTER: I'm sorry, Counsel, I  
8 can't hear you.

9 BY ATTORNEY BROOKS:

10 **Q. One reason, according to what you've written in**  
11 **this article, that there have been a carve-out in a**  
12 **separate female division is to provide girls and women**  
13 **with opportunities to, quote, reliably win events,**  
14 **closed quote.**

15 **Correct?**

16 A. So I guess the way I would say it is if we are  
17 going to be really careful with the language here that  
18 it would be on average to reliably win events, that is  
19 --- yeah, I will leave it at that.

20 **Q. Certainly not every girl and women is going to**  
21 **win events, as I know as a male who never won an event?**

22 A. Exactly.

23 **Q. And another reason, according to this sentence**  
24 **that you wrote, for having a separate category for girls**

1 **and women is so that they can, quote, safely compete.**

2 **Correct?**

3 A. The word safely in that context is kind of ---  
4 accentuates reliably.

5 **Q. And you wrote in the next sentence that, quote,**  
6 **the female-only divisions are a major factor to**  
7 **encourage greater participation of girls and women in**  
8 **sports with a goal of equal participation rates.**

9 **Do you see that language?**

10 A. I do.

11 **Q. And can you explain to me what you understand or**  
12 **what you were trying to explain as the relationship**  
13 **between having a separate female category on the one**  
14 **hand and encouraging greater participation by women and**  
15 **girls on the other?**

16 A. Some of the goals of the people who are in sport  
17 who organize sport are to get as high fractions of the  
18 population to participate as can be encouraged to do so  
19 for sheer health of those individuals and then of  
20 everybody. And so the purpose of the carve-out then in  
21 these circumstances is to encourage girls and women to  
22 participate in larger numbers than they might otherwise.

23 **Q. And do you have an opinion, do you have an**  
24 **expert opinion as to whether the existence of separate**

1 categories for female sports has in fact been a, quote,  
2 major factor in encouraging greater participation by  
3 women and girls in sport?

4 A. I don't have an expert opinion.

5 **Q. You don't know whether that is objectively true**  
6 **or not?**

7 ATTORNEY BLOCK: Objection to form.

8 THE WITNESS: I don't --- right, I can't  
9 state as an expert on the details of that subject,  
10 that's right.

11 BY ATTORNEY BROOKS:

12 **Q. On the second column, in the --- the first full**  
13 **sentence begins many hormone related. Do you see that?**

14 A. Yes, I do.

15 **Q. Let me read that sentence into the record.**  
16 **Quote, many hormone-related physical characteristics**  
17 **acquired during puberty are not reversed if hormone**  
18 **levels are changed later in life. Can you tell us what**  
19 **physical characteristics associated with typical male**  
20 **development are in your opinion not reversed if hormone**  
21 **levels are changed later in life?**

22 A. Again, so I don't know that I would off the top  
23 of my head give an exhaustive list but a classic would  
24 be height.

1 **Q. Would you --- I understand your list may not be**  
2 **exhaustive, but let me ask you to tell us all the**  
3 **examples as you're able to sit here thinking today of**  
4 **physical characteristics acquired during male puberty**  
5 **that are not reversed if hormone levels are changed**  
6 **later in life.**

7 ATTORNEY BLOCK: Objection to form.

8 THE WITNESS: I don't know that I could  
9 --- I don't know that I would want to accidentally go  
10 down that path and conjecture too much, but if I'm  
11 expanding a bit on height and thinking about bone  
12 characteristics, especially there might be modest change  
13 but significant residual bone would be the biggest  
14 example. And some other elements --- I can't even say I  
15 was about to say a bit proportional, but it's more  
16 complicated than that, so other --- other tissues partly  
17 influenced by that fact.

18 BY ATTORNEY BROOKS:

19 **Q. If we jump down to the next paragraph it begins,**  
20 **quote, the questions arise most with transgender women**  
21 **who began hormone treatment after puberty. And then it**  
22 **continues, quote, the situation includes most**  
23 **transfeminine people because it is most common to**  
24 **undergo endogenous puberty prior to seeking medical**

1 **interventions appropriate to gender identity. Have I**  
2 **read that correctly?**

3 A. Yes.

4 **Q. And is it consistent with your experience that**  
5 **most natal males who seek what you refer to as gender**  
6 **confirming treatment do so after experiencing at least**  
7 **most of the ordinary male puberty?**

8 ATTORNEY BLOCK: Objection to form.

9 THE WITNESS: Yes. So just terminology,  
10 just to be clear, so people who are recorded male at  
11 birth who are looking for gender affirming is the term  
12 but gender confirming is fine. And sorry, the question  
13 there?

14 BY ATTORNEY BROOKS:

15 **Q. I will ask it again. Is it consistent with your**  
16 **personal experience that most natal males who seek**  
17 **gender affirming treatment present after undergoing at**  
18 **least most of a natural male puberty?**

19 ATTORNEY BLOCK: Same objection to  
20 terminology.

21 THE WITNESS: Yes. So most transgender  
22 women who come seeking medical treatment have gone  
23 through a typical male puberty, that is correct, right  
24 now.

1 BY ATTORNEY BROOKS:

2 **Q. And in your clinic most of them have gone**  
3 **through what you would consider to be a complete male**  
4 **puberty process?**

5 A. I can't answer that completely because we define  
6 puberty in this narrow way with the Tanner stages, but  
7 then people continue to have development even beyond  
8 that to a significant degree.

9 **Q. But they have experienced, in your professional**  
10 **experience, at least the bulk of the pubertal changes?**

11 A. Yes, I mean the --- I guess --- the way I would  
12 say it is, is that most of the transgender women who are  
13 coming or even girls who are coming for medical  
14 attention have gone through the classic Tanner stages of  
15 puberty through Tanner five, which is the last one, by  
16 the time they have determined that they're interested in  
17 gender-affirming treatment, yes.

18 **Q. And let's go back to the very first paragraph of**  
19 **your article in which you mention about five lines down,**  
20 **quote, concern for possible residual athletic advantages**  
21 **from a history of typical male puberty, closed quote.**  
22 **Do you see that language?**

23 A. Let me find it. Where is it?

24 **Q. It's about five lines down on the very first**

Page 26

1 paragraph of the article.

2 A. Oh, the middle of the sentence, exactly.

3 **Q. And so in your opinion, it is concern for**  
4 **possible residual athletic advantages from a history of**  
5 **typical male puberty that drives a great deal of concern**  
6 **about how to address inclusion of natal males who**  
7 **experience a female gender identity in female athletics.**

8 **Am I correct?**

9 ATTORNEY BLOCK: Objection to form.

10 THE WITNESS: So the concern about the  
11 residual impact of testosterone during puberty for  
12 transgender women who went through a typical male  
13 puberty is the source of --- right, is a source of  
14 tension at a medical sensitive level, yes.

15 BY ATTORNEY BROOKS:

16 **Q. And that's an issue that, for instance, you**  
17 **engage in extensive discussions about in connection with**  
18 **your service on the committee for the IAAF.**

19 **Am I correct?**

20 A. So the --- right, the conversation at World  
21 Athletics now, but formerly IAAF, has dealt and I'm sure  
22 will continue to deal with that which is the question of  
23 to what degree are some of those characteristics, a  
24 cause for relevant athletic advantage.

Page 28

1 **other considerations of fairness, of inclusion, that is**  
2 **not your expertise is what you are telling me?**

3 A. That is right, that is not my expertise.

4 **Q. If we go to page two, in the first column, the**  
5 **second full paragraph begins because testosterone. Do**  
6 **you see that paragraph?**

7 A. I do.

8 **Q. And you discuss there World Athletic**  
9 **requirements, that is the former IAAF I believe you just**  
10 **testified?**

11 A. Yes.

12 **Q. And the World Athletics has adopted a**  
13 **requirement to suppress testosterone (sic) to five**  
14 **nanomolar per liter testosterone.**

15 **Correct?**

16 A. World Athletics threshold is five nanomolar per  
17 liter for those sports where they have a threshold.  
18 That's right, yes.

19 **Q. And at least formally the International Olympic**  
20 **Committee had a ten nanomolar threshold as part of what**  
21 **you would call out in this paragraph.**

22 **Is that correct?**

23 ATTORNEY BLOCK: Objection to form.

24 THE WITNESS: Yes. So it was the case

Page 27

1 **Q. And in your opinion, concern about possible**  
2 **residual athletic advantages resulting from a history of**  
3 **typical male puberty is legitimate concern.**

4 **Right?**

5 ATTORNEY BLOCK: Objection to form.

6 THE WITNESS: Right. I don't know that  
7 I'm as an expert commenting on its legitimacy. My role  
8 on the committee is talking about what is.

9 BY ATTORNEY BROOKS:

10 **Q. Do you have any expert opinion as to whether**  
11 **concern for possible residual athletic advantages from a**  
12 **history of typical male puberty is a legitimate concern?**

13 A. I'm sorry. Say that again.

14 **Q. Do you have any expert opinion as to whether**  
15 **concern for possible residual athletic advantage from a**  
16 **history of a typical male puberty is a legitimate**  
17 **concern?**

18 A. I don't know that I would --- again, I don't  
19 know that I'm an expert on what is legitimate or not. I  
20 come into the room as the scientist talking about what  
21 is true and what is not true, what do we know and what  
22 do we not know.

23 **Q. So on the question then after the science has**  
24 **been put on the table as to how to balance that with**

Page 29

1 that the International Olympic Committee Medical Group  
2 was trying to form a unified approach just for purposes  
3 of organization. And at that time a ten nanomolar per  
4 liter suggestion was put out. And that is about as far  
5 as it got because it then was shifted to all of the  
6 individual international federations.

7 BY ATTORNEY BROOKS:

8 **Q. You say in the final sentence of that paragraph,**  
9 **quote, such thresholds are considered to be fair to**  
10 **transgender women because they are well above the 1.7**  
11 **nanomolar per liter target testosterone threshold in**  
12 **medical treatment guidelines, closed quote.**

13 **Do you see that language?**

14 A. Yes.

15 **Q. Am I correct that in your professional**  
16 **understanding the 1.7 nanomolar per liter target is set**  
17 **because that's generally believed to be at the upper**  
18 **range of testosterone levels in normal, healthy females?**

19 ATTORNEY BLOCK: Objection to form.

20 THE WITNESS: So the 1.7 nanomolar per  
21 liter target is the upper level for adults cisgender  
22 women.

23 BY ATTORNEY BROOKS:

24 **Q. And with that clarified, can you explain to me**

**what you meant by the sentence that I just read, what the point is there?**

A. The point of the sentence is to --- I guess there are a couple of considerations in terms of determining these numbers, but --- so part of the point is to identify numbers that are feasible for transgender women on their medical treatment.

**Q. Is there some other point to this sentence in your understanding as it is offered?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So the sentence references that piece, but there is the additional context of having a number that is fair to the greater female committee cisgender and transgender too.

BY ATTORNEY BROOKS:

**Q. So it's fair in your judgment to transgender women because the threshold that is being set gives, what should we say, plenty of buffer above what is considered to be the upper range of normal female testosterone levels?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: Right. So I'm not taking a position on what is fair to be clear.

BY ATTORNEY BROOKS:

women has an upper limit of 1.7 nanomolar per liter, there are cisgender women who, for a variety of reasons, have numbers higher than that and so that and --- so that is part of the consideration.

BY ATTORNEY BROOKS:

**Q. Let me take you to the two paragraphs below that to the paragraph that begins the societal priorities. Do you see that paragraph?**

A. I do.

**Q. The last sentence of that paragraph reads if advantage from testosterone is demonstrated, does society want to implement rules that may indirectly coerce transgender children to begin medical regimens prior to their being ready and that they might never actually choose otherwise, closed quote.**

**Do you see that language?**

A. I do.

**Q. Would you explain to me the concern that you are expressing there?**

A. If a societal goal --- and again here recognize I'm not acting as an expert in this space, but I'm trying to explain to my colleagues what people are discussing. And if our concern is increased participation in sport by various people, then you can

**Q. Thank you.**

A. But the concept of those in the room making that distinction felt that this cutoff would be fair because there would be, indeed, create some buffer and, therefore, people who weren't perfectly at goal would still be included.

**Q. So because this may be important, let me clarify, when you wrote such thresholds are considered to be fair, you were not offering a personal opinion about fairness but explaining the judgment that had been made by this committee about fairness?**

A. That's correct.

**Q. Thank you. And did it cause you personally any concern that the threshold --- that because the threshold that was set was more than three times higher than the upper bounds of testosterone concentrations in normal healthy women, that that might be unfair to the broader population of cisgender women?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So to be clear, I'm not rendering an opinion as an expert on what is fair, but I can interpret the considerations of people having these conversations. And so while it is true that the laboratory range for testosterone for healthy cisgender

envision a circumstance where some girls farther along in puberty have a testosterone advantage that could be demonstrated. Again, not that we even have at this point. And then we would be faced with that question, which is that competing goal of making those transgender girls participate in sports and a recognition if they are sufficiently far along in their development that they may have an advantage if we demonstrate such an advantage.

**Q. Let me see if I can break that out. Were you talking here about a concern about a hypothetical rule that says to a natal male who identifies as female that you may play if you have suppressed testosterone --- you may play if you have taken puberty blockers at an early age but you may not play if you have not taken puberty blockers from an early stage? Is that the hypothetical structure that you were addressing in this sentence?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So the --- it is a hypothetical and it would be that if we make a specific testosterone lowering rule at a scholastic level, might we run into a circumstance where we are encouraging somebody to make medication who might not otherwise take that medication.

Page 34

1 BY ATTORNEY BROOKS:  
2 **Q. And staying away from questions of fairness and**  
3 **speaking from what I think is a medical ethics**  
4 **perspective, would you think it raises ethical problems**  
5 **if society were to adopt a rule that permitted certain**  
6 **individuals to compete in female athletics if they had**  
7 **taken puberty blockers but did not permit them to**  
8 **compete with the athletic if they had not taken puberty**  
9 **blockers?**  
10 ATTORNEY BLOCK: Objection to form.  
11 THE WITNESS: I think that's beyond where  
12 I'm commenting as an expert witness. Some of that  
13 decision is a society decision or for other experts.  
14 BY ATTORNEY BROOKS:  
15 **Q. Do you consider yourself to have some expertise**  
16 **on medical ethics?**  
17 A. Not as an expert.  
18 **Q. And you don't feel able --- you don't have any**  
19 **opinion as you sit here today as to whether a policy**  
20 **that created incentives for children to begin medical**  
21 **regimes relating to gender transition could raise**  
22 **medical ethical concerns?**  
23 A. Not as a medical expert, that's right.  
24 **Q. In the next paragraph --- and I think we said**

Page 35

1 **this is just out in the last couple of weeks, this**  
2 **publication.**  
3 **Right?**  
4 A. It's very fresh. Number five, so yes.  
5 **Q. I'm not playing memory games. It says at the**  
6 **top advance access publication 17 March 2022?**  
7 A. Good.  
8 **Q. So very recent?**  
9 A. Yes.  
10 **Q. And you believe you are reasonably current in**  
11 **the science of this area?**  
12 A. I am reasonably current, indeed.  
13 **Q. I didn't ask if you know it all because nobody**  
14 **knows it all, but you say at the beginning of this**  
15 **paragraph much remains unknown scientifically. And you**  
16 **continue, quote, for example, at what point in puberty**  
17 **is advantage from testosterone significant. Is there a**  
18 **point where such advantage would outweigh a priority to**  
19 **outweigh all participants --- all to participate in**  
20 **sport of some sort, closed quote.**  
21 **Do you see that language?**  
22 A. I do.  
23 **Q. And actually the point in writing the second**  
24 **sentence there --- strike that.**

Page 36

1 **Let me just ask this in general. Do you have**  
2 **an opinion as to how much of a performance advantage**  
3 **would count for those --- for natal males versus natal**  
4 **females, how much of a performance advantage would be,**  
5 **quote, significant?**  
6 ATTORNEY BLOCK: Objection to form.  
7 THE WITNESS: I do not have an opinion.  
8 BY ATTORNEY BROOKS:  
9 **Q. And in your view, is that even a scientific**  
10 **question?**  
11 ATTORNEY BLOCK: Objection to form.  
12 THE WITNESS: Let me think. No, that  
13 isn't a scientific question.  
14 BY ATTORNEY BROOKS:  
15 **Q. And you --- and the next sentence is there a**  
16 **point where an advantage, such an advantage would**  
17 **outweigh a priority to motivate all to participate. Am**  
18 **I correct that you also don't consider that to be a**  
19 **scientific question?**  
20 A. That is correct.  
21 **Q. That is a value judgment?**  
22 ATTORNEY BLOCK: Objection to form.  
23 THE WITNESS: So it's not a scientific  
24 question. I can go a little more in --- I can expand a

Page 37

1 little bit there which is to say that we have various  
2 advantages and degrees of unfairness. So what could be  
3 a scientific question, if we knew the answers, would  
4 include the degree of advantage for some circumstance  
5 versus another circumstance where we are able to measure  
6 those things.  
7 BY ATTORNEY BROOKS:  
8 **Q. But the question of whether an advantage on the**  
9 **one hand outweighs a desire to be inclusive on the other**  
10 **hand is a value question, not a scientific question?**  
11 ATTORNEY BLOCK: Objection to form.  
12 BY ATTORNEY BROOKS:  
13 **Q. In your opinion.**  
14 ATTORNEY BLOCK: Objection to form.  
15 THE WITNESS: So I guess I would just go  
16 back to saying how I said it, which is the scientific  
17 question in there would be to provide that degree of  
18 difference and show, for example, that this would be ---  
19 this is small advantages versus someone that we are  
20 already do in society as big advantage and that would be  
21 how --- that would be the role of the scientist.  
22 BY ATTORNEY BROOKS:  
23 **Q. I understand that's what you would like to say,**  
24 **but my question for you is, in your opinion, is the next**

1 **step of deciding of whether that advantage which has now**  
 2 **been scientifically detailed outweighs a priority to**  
 3 **motivate all to participate is a value decision.**

4 ATTORNEY BLOCK: Objection to form.

5 THE WITNESS: Yeah, I don't --- I guess I  
 6 can't as an expert say for certain that in all  
 7 circumstances that is a value to consider.

8 BY ATTORNEY BROOKS:

9 **Q. You continue among your lists of things that**  
 10 **are, quote, unknown scientifically, quote, for those who**  
 11 **have completed puberty, what duration of**  
 12 **testosterone-lowering treatment is sufficient to create**  
 13 **a level playing field in a given sport, closed quote.**

14 **Do you see that?**

15 A. Yes.

16 **Q. And in your view, the question of what duration**  
 17 **of testosterone lowering treatment, if any, can be**  
 18 **sufficient to create a level playing field in a given**  
 19 **sport is currently unknown scientifically?**

20 ATTORNEY BLOCK: Objection to form.

21 THE WITNESS: It's unknown scientifically  
 22 across virtually all sports. What duration of  
 23 testosterone lowering raises what degree of advantage.  
 24 It's just at that level. To go to the level playing

1 field is a whole further tier.

2 BY ATTORNEY BROOKS:

3 **Q. And in your final paragraph I think you said at**  
 4 **the beginning that, in part, this was a call to the**  
 5 **field of endocrinology for needed research. In the**  
 6 **final paragraph you say, quote, we in the endocrine**  
 7 **healthcare community have much work to do to create an**  
 8 **evidence base to help guide decision makers so the**  
 9 **choices for transgender women in sport are data driven,**  
 10 **closed quote.**

11 **Have I read that language correctly?**

12 A. Yes.

13 **Q. So it's your view as of 2002 that the data that**  
 14 **we have available today are insufficient to enable data**  
 15 **driven choices about transgender participation in female**  
 16 **athletics.**

17 **Correct?**

18 ATTORNEY BLOCK: Objection to form.

19 THE WITNESS: I would say that in 2022 we  
 20 have insufficient data to --- how would I say this, we  
 21 have insufficient data to make rules for, let's say,  
 22 transgender women, mostly talking about older more  
 23 developed people, that would address these concerns for  
 24 participation.

1 BY ATTORNEY BROOKS:

2 **Q. Let me ask you to find your initial expert**  
 3 **report, which is Exhibit-1, and there I will ask you to**  
 4 **turn to paragraph 58. At the beginning of paragraph 58**  
 5 **you wrote in this report executed on January 21, 2022,**  
 6 **which is two months prior to the publication date of the**  
 7 **article we just looked at --- and actually, let me pause**  
 8 **and ask you, when did you write the article that we just**  
 9 **looked at? And the process always grinds on for a**  
 10 **little while. When do you think you substantially**  
 11 **completed the task?**

12 A. I honestly don't remember.

13 **Q. Sorry. The question was when do you think you**  
 14 **substantially wrote the text in the article that you**  
 15 **just looked at?**

16 A. I honestly don't remember the details. We can  
 17 talk in years, so it would be 2022 and back into 2021.

18 **Q. Okay.**

19 **So about the same time that you were preparing**  
 20 **this expert report?**

21 A. There certainly would be some overlap.

22 **Q. You wrote in paragraph 58, quote, even if**  
 23 **evidence were eventually to show that on average**  
 24 **transgender women have some level of advantage compared**

1 **to average non-transgender women, closed quote.**

2 **Do you see that language?**

3 A. I do.

4 **Q. Now, in fact, you are aware of substantial**  
 5 **evidence that, on average, transgender women do have**  
 6 **some level of advantage compared to advantage**  
 7 **non-transgender women.**

8 **Correct?**

9 ATTORNEY BLOCK: Objection to form.

10 THE WITNESS: No, I'm not. So that isn't  
 11 my statement.

12 BY ATTORNEY BROOKS:

13 **Q. And is the question --- so you served on the**  
 14 **IAAF Committee discussing questions of testosterone**  
 15 **levels. And in that context you did not become**  
 16 **acquainted with data showing that on average transgender**  
 17 **women have some level of advantage compared to average**  
 18 **non-transgender women?**

19 A. Not in --- so, no. In the context of specific  
 20 sports, no.

21 **Q. Do you consider the question of how much**  
 22 **advantage natal males have over natal females in**  
 23 **particular sports to be within your professional**  
 24 **expertise?**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p style="text-align: right;">Page 42</p> <p>1 ATTORNEY BLOCK: Objection to form.</p> <p>2 THE WITNESS: So sorry --- so cisgender</p> <p>3 men versus cisgender women, that difference at an adult</p> <p>4 level, is at my expertise to know that degree of</p> <p>5 difference? Is that the question?</p> <p>6 BY ATTORNEY BROOKS:</p> <p>7 <b>Q. It is.</b></p> <p>8 A. No, that is not my expertise.</p> <p>9 <b>Q. And is it within your expertise to know the</b></p> <p>10 <b>level of advantage enjoyed by natal males who have</b></p> <p>11 <b>transitioned to female gender identity over cisgender</b></p> <p>12 <b>women in any particular sport?</b></p> <p>13 ATTORNEY BLOCK: Objection to form.</p> <p>14 THE WITNESS: So in the --- so if we are</p> <p>15 talking cisgender women versus transgender women, it</p> <p>16 would be in my expertise to know what data we have on</p> <p>17 this subject, which is different from knowing the degree</p> <p>18 of difference because we don't have those data.</p> <p>19 BY ATTORNEY BROOKS:</p> <p>20 <b>Q. You say in paragraph 60, let me find this,</b></p> <p>21 <b>quote, there is no inherent reason why transgender women</b></p> <p>22 <b>physiological characteristics related to athletic</b></p> <p>23 <b>performance should be treated as any more of an unfair</b></p> <p>24 <b>advantage than the advantages that already exist among</b></p> | <p style="text-align: right;">Page 44</p> <p>1 ---</p> <p>2 ATTORNEY WILKINSON: Tab 18.</p> <p>3 VIDEOGRAPHER: I'm sorry, what tab is it?</p> <p>4 ATTORNEY BROOKS: Tab 18.</p> <p>5 BY ATTORNEY BROOKS:</p> <p>6 <b>Q. And Doctor Safer, am I correct this is an</b></p> <p>7 <b>article that you read with some care?</b></p> <p>8 A. This is an article that I read with some care.</p> <p>9 <b>Q. You cited in your expert report.</b></p> <p>10 <b>Correct?</b></p> <p>11 A. I think so.</p> <p>12 <b>Q. I think so, too. It's not a memory test. I</b></p> <p>13 <b>retract the question. We will come to it shortly.</b></p> <p>14 <b>Let me ask you to turn in --- and let me ask</b></p> <p>15 <b>you, do you know Professor Handelsman personally?</b></p> <p>16 A. I do not.</p> <p>17 <b>Q. Have you encountered him in any other actions?</b></p> <p>18 A. I have.</p> <p>19 <b>Q. Once, more than once?</b></p> <p>20 A. That is also a trick question for me. For sure</p> <p>21 once.</p> <p>22 <b>Q. Okay.</b></p> <p>23 <b>Do you consider him to have a high reputation</b></p> <p>24 <b>in the field?</b></p>                                                                                                                                                                                                                              |
| <p style="text-align: right;">Page 43</p> <p>1 <b>different women athletes. Do you see that language?</b></p> <p>2 A. I do.</p> <p>3 <b>Q. Now, earlier you told me rather emphatically</b></p> <p>4 <b>that the question of fairness is outside your</b></p> <p>5 <b>professional expertise.</b></p> <p>6 <b>Correct?</b></p> <p>7 ATTORNEY BLOCK: Objection to form.</p> <p>8 THE WITNESS: It is outside my expertise.</p> <p>9 BY ATTORNEY BROOKS:</p> <p>10 <b>Q. So why did you offer here an opinion about what</b></p> <p>11 <b>is fair or unfair?</b></p> <p>12 ATTORNEY BLOCK: Objection to form.</p> <p>13 THE WITNESS: Right. So I'm not</p> <p>14 determining the fairness per se as an expert, but I'm</p> <p>15 simply talking about the inputs where somebody who is</p> <p>16 determining what is fair --- where somebody is</p> <p>17 determining what is fair would consider.</p> <p>18 ATTORNEY BROOKS: Let me mark as Safer</p> <p>19 Exhibit 4 an article by Professor Handelsman entitled</p> <p>20 Circulating Testosterone on a Hormonal Basis of Sex</p> <p>21 Differences in Athletic Performance.</p> <p>22 ---</p> <p>23 (Whereupon, Exhibit 4, Professor Handelsman</p> <p>24 Article, was marked for identification.)</p>                                                                                                                                                                     | <p style="text-align: right;">Page 45</p> <p>1 A. If that question is as an expert I can't --- I</p> <p>2 won't comment, but he certainly has published widely and</p> <p>3 we quote him.</p> <p>4 <b>Q. What do you mean by we in that answer?</b></p> <p>5 A. The rest of us in the field and I certainly</p> <p>6 quote him in an expert opinion.</p> <p>7 <b>Q. All right.</b></p> <p>8 <b>And this article in particular we note you</b></p> <p>9 <b>widely reference?</b></p> <p>10 A. This article is --- yeah, I think that is</p> <p>11 actually a fair thing to say. It is as widely</p> <p>12 referenced as anything in a relatively small field.</p> <p>13 <b>Q. Let me ask you to turn to the second page of</b></p> <p>14 <b>this article where Professor Handelsman in the first</b></p> <p>15 <b>full paragraph --- the second full paragraph begins</b></p> <p>16 <b>nevertheless. He says, quote, fairness is an elusive</b></p> <p>17 <b>subjective concept with malleable boundaries that may</b></p> <p>18 <b>change over time as social concepts of fairness evolve.</b></p> <p>19 <b>Do you see that?</b></p> <p>20 A. I do.</p> <p>21 <b>Q. Do you agree with that statement?</b></p> <p>22 A. As an expert I can't comment.</p> <p>23 <b>Q. You don't purport to be able to give any</b></p> <p>24 <b>definition of fairness?</b></p> |

Page 46

1 ATTORNEY BLOCK: Objection to form.

2 THE WITNESS: Yes, not as an expert.

3 BY ATTORNEY BROOKS:

4 **Q. And you don't have any opinion as to whether**  
5 **standards of fairness can change over time?**

6 ATTORNEY BLOCK: Objection to form.

7 THE WITNESS: I'm aware of the  
8 conversation on the subject, of course, but if you are  
9 asking me to comment as an expert, then no.

10 BY ATTORNEY BROOKS:

11 **Q. If the actual evidence shows that the actual**  
12 **scientific data were to show that, quote, on average**  
13 **transgender women have, closed quote, a very large**  
14 **advantage compared to average non-transgender women,**  
15 **would you then have any view as to whether permitting**  
16 **non-transgender women to compete in female categories is**  
17 **fair?**

18 ATTORNEY BLOCK: Objection to form. I'm  
19 sorry, what's the quotation?

20 BY ATTORNEY BROOKS:

21 **Q. If actual data were to show that on average**  
22 **transgender women have a very large advantage compared**  
23 **to non-transgender women, then would you have any**  
24 **opinion as to whether it is fair to permit the**

Page 48

1 **have substantially more favorable physiques than others?**

2 ATTORNEY BLOCK: Objection to form.

3 THE WITNESS: Right. So for any given  
4 sport some women have advantages relatively to others,  
5 yes.

6 BY ATTORNEY BROOKS:

7 **Q. And in basketball some are simply genetically**  
8 **going to be substantially taller than others?**

9 A. In basketball some are taller than others, yes.

10 **Q. I'm not speaking for you, I, at 5'8", in my**  
11 **shoes for instance was --- am just physiologically**  
12 **disadvantaged for basketball compared to a man who is**  
13 **6'10"?**

14 ATTORNEY BLOCK: Objection to form.

15 THE WITNESS: So as an expert I actually  
16 wouldn't go there because there are other  
17 characteristics in basketball per se.

18 BY ATTORNEY BROOKS:

19 **Q. That's true, although I have none of them. But**  
20 **is it, in your view, equally true that there is no**  
21 **inherent reason why cisgender men's physiological**  
22 **characteristics related to athletic performance should**  
23 **be treated as any more of an unfair advantage for**  
24 **competing in the women's category than the advantages**

Page 47

1 **transgender women to compete in the female category?**

2 ATTORNEY BLOCK: Objection to form.

3 THE WITNESS: No, that would not change.  
4 I would simply as an expert I would talk about those  
5 degrees of difference as information.

6 BY ATTORNEY BROOKS:

7 **Q. But you would offer no opinion as to whether**  
8 **permitting the participation in the female category was**  
9 **or was not appropriate?**

10 A. I would not offer an expert opinion. That's  
11 right.

12 **Q. Now, you say in paragraph 60 of your expert**  
13 **record that there is, quote, no inherent why transgender**  
14 **women's physiological characteristics related to**  
15 **athletic performance should be treated as any more of an**  
16 **unfair advantage than the advantages that already exist**  
17 **among different women athletes, close quote. We have**  
18 **looked at that language.**

19 **Correct?**

20 A. You are reading that correctly.

21 **Q. Thank you.**

22 A. Whatever the question is.

23 **Q. No question beyond that so far. And your point**  
24 **I take it is that for any given sport some women just**

Page 49

1 **that already exist among different women athletes?**

2 A. So yeah, let's go through this more slowly a  
3 second so I'm clear.

4 **Q. All I did was substitute cisgender men for**  
5 **transgender women in that sentence. And my question is**  
6 **doesn't your argument as stated there apply exactly with**  
7 **equal force to cisgender male?**

8 A. No.

9 **Q. Why is that?**

10 A. When we talk about --- when we're talking about  
11 a range of characteristics among a range of people  
12 versus something that might be systematically true or  
13 not and so it just --- so the answer just ends up being  
14 more complex.

15 **Q. Well, you have testified that most natal women**  
16 **--- pardon me, you testified that most natal males with**  
17 **female gender identity have undergone at least the**  
18 **majority of male puberty before they present for gender**  
19 **affirming treatment.**

20 **Correct?**

21 ATTORNEY BLOCK: Objection to form.

22 THE WITNESS: So most cisgender women  
23 when they come to medical attention have gone through a  
24 significant puberty, the five Tanner stages.

BY ATTORNEY BROOKS:

**Q. And just to clarify, to use your terms, in giving that answer you said cisgender women. That is not what you meant.**

**Correct?**

A. That is not what I meant, thank you. Transgender women.

**Q. And therefore, they systematically have gone through --- systematically gone through physiologic changes associated with male puberty?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So the --- so they --- they have gone through male puberty. And there is something on average that may be true there, but whether that relates to an advantage in a specific sport I can't go there.

BY ATTORNEY BROOKS:

**Q. Well, the example that you gave earlier of a systematic difference resulting from male puberty that these transgender women enjoy is height, that is you mentioned that earlier.**

**Correct?**

A. Uh-huh (yes).

**Q. So again, let me ask, given that according to**

**advantage in the sport they wish to play in as a result of typical male development that they had gone through?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: Right, I'm not offering an opinion. It was a long question.

BY ATTORNEY BROOKS:

**Q. Would you like to hear the question back?**

A. Sure, but I'm not offering an opinion on several aspects.

ATTORNEY BROOKS: Would you read that question back, please?

---

(COURT REPORTER READS BACK PREVIOUS QUESTION.)

---

BY ATTORNEY BROOKS:

**Q. And your answer is?**

A. So I'm not offering an opinion. I should expand a bit because how that question was phrased as an individual by individual person and most of these rules are across a group of sports.

**Q. And my question was about an individual person.**

A. Your question was an individual person, but ---.

**Q. Right. Looking at your paragraph 60, again, do you believe there is --- are you offering an opinion ---**

**your testimony and experience the substantial majority of transgender women have undergone most of male puberty, why is it not equally true that there is no inherent reason why cisgender men's physiological characteristics related to athletic performance should be treated as any more of an unfair advantages than the advantages that already exist among different women athletes?**

A. So if I'm following this correctly then it's --- then the answer to the question why are cisgender men different than transgender women?

**Q. Why does this logic apply differently to the cisgender men than to the transgender women?**

A. So let's see. It actually doesn't. So if you have a sport where that --- where the advantage or --- for the --- where a known advantage for cisgender men versus cisgender women was sufficiently modest, and again, I wouldn't be the judge of that, but you could envision that becoming a coed sport.

**Q. Are you offering an opinion that either government or leagues have an obligation to do an individual by individual assessment as to whether a particular natal male who experiences a female gender identity does or does not enjoy a physiological**

**let me start that again. Are you able to identify for me any inherent reason why a relatively weak or small or slow male --- strike that.**

**You referenced in your report and also the article we just looked at the IAAF regulations that excluded from the female category any individual who has circulating testosterone higher than five nanomolar per liter. Do you recall that?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So just to clarify, it is not --- that rule for five nanomolars is not across all sports.

BY ATTORNEY BROOKS:

**Q. And which sports in your recollection did that apply to?**

A. Yeah, that's --- I don't remember off the top of my head.

**Q. At the very least it applied to track events.**

**Correct?**

A. It does. But if you start to quiz me on the specific distances, I won't get that.

**Q. And nor will I so quiz you. And that requirement as applied to track competition was, in fact, the subject of a major international arbitration,**

1 as you're aware.

2 **Correct?**

3 A. If we're referencing the Caster Semenya case,  
4 yes.

5 **Q. Did you yourself have any participation in that**  
6 **arbitration?**

7 A. I did not.

8 **Q. Do you know whether Doctor Handelsman had any**  
9 **participation in that?**

10 ATTORNEY BLOCK: Objection.

11 THE WITNESS: I don't know off the top  
12 off of my head.

13 BY ATTORNEY BROOKS:

14 **Q. Have you ever read the arbitral decision in**  
15 **that case?**

16 A. I'm certain I read excerpts, but that is as much  
17 as I could say.

18 **Q. Okay.**

19 **You participated in developing on the --- a**  
20 **member of the committee that developed the regulation**  
21 **that you've referenced, the 7.5 nanomolar threshold?**

22 A. I was on the committee that helped determine  
23 that particular threshold conceptual, yes.

24 **Q. And you're aware that in addition to individuals**

1 **Q. And you thought that that rule was reasonable?**

2 A. As with the data we have currently, yes,  
3 personally.

4 **Q. And what, in your opinion, is the inherent**  
5 **reason that advantages conferred by testosterone levels**  
6 **far outside the normal female range should be treated as**  
7 **any more of an unfair advantage than the advantages that**  
8 **already exist among different women athletes?**

9 ATTORNEY BLOCK: Objection. I'm sorry.  
10 Can you clarify as an expert or as an individual just  
11 because you shifted back and forth?

12 BY ATTORNEY BROOKS:

13 **Q. First as an expert.**

14 A. So yes --- give me the question again. I'm  
15 sorry.

16 **Q. What, in your opinion, is the inherent reason**  
17 **that advantages conferred by testosterone levels outside**  
18 **the normal female range should be treated as any more of**  
19 **an unfair advantage than the advantages that already**  
20 **exist among different women athletes?**

21 A. So to clarify we --- so, okay, let me go back.  
22 Let me answer in pieces I guess or ask you to say it in  
23 pieces. So what is different between typical male  
24 levels of testosterone in an individual and some other

1 **such as Caster Semenya, who suffered of a disorder of**  
2 **sexual development, that that rule would exclude some**  
3 **transgender women from female athletics that were**  
4 **subject to that IAAF rule.**

5 **Correct?**

6 ATTORNEY BLOCK: Objection to the  
7 terminology.

8 THE WITNESS: So I was aware that by  
9 setting a threshold that there --- and even that  
10 threshold in particular, that there would be transgender  
11 women who would not achieve that threshold for whatever  
12 reason.

13 BY ATTORNEY BROOKS:

14 **Q. And did you nevertheless consider the regulation**  
15 **to be reasonable?**

16 A. If you are asking me as an expert, then again I  
17 can't comment.

18 **Q. Well, let me just ask you as Doctor Safer.**

19 A. Am I allowed to ---?

20 ATTORNEY BLOCK: Objection to form.

21 BY ATTORNEY BROOKS:

22 **Q. You are allowed.**

23 A. Okay. So having a rule does make sense to me,  
24 yes.

1 characteristics that are across the range of  
2 characteristics of cisgender women? Is that the  
3 question? Am I rephrasing that correctly?

4 **Q. I'm actually referencing paragraph 60 of your**  
5 **expert report, but my question --- and let's take for**  
6 **instance, a natal male who has press testosterone but**  
7 **only achieved six nanomolar per liter concentration, do**  
8 **you have that concentration, do you have that in mind?**

9 A. A transgender woman whose testosterone level is  
10 six.

11 **Q. Right. What in your opinion is the inherent**  
12 **reason that advantages conferred by testosterone levels**  
13 **above a threshold such as five nanomolars should be**  
14 **treated as any more of an unfair advantage than the**  
15 **advantages that already exist among different women**  
16 **athletes?**

17 ATTORNEY BLOCK: Objection to form.

18 THE WITNESS: So a couple of things.  
19 First of all, I don't know that a testosterone level of  
20 six is from a scientific perspective demonstratively  
21 different than a testosterone level of five. It's just  
22 a matter of affecting it overall. So I want to clarify  
23 that. It's not that --- that that small degree is  
24 necessarily relevant. And I can't even say that we

demonstrated advantage. It's still a theoretical with regard to some of those higher testosterone levels. Let me think about those for a second. Yes, so some of the logic pattern for having a threshold is in order to be able to limit the entire conversation to dealing with transgender women or women with --- or intersex women or women who for any reason have have elevated testosterone levels and not to open the door at the elite level for a participation by cisgender men posing as cisgender women if that makes sense.

BY ATTORNEY BROOKS:

**Q. Is there, in your judgment, any inherent reason that advantages conferred by testosterone levels well outside normal female ranges should be treated as any more of an unfair advantage than the advantages that already exist among different women athletes?**

A. So I have to go back to that one. Is it my opinion that male level testosterone levels ---?

**Q. Let me --- my question is testosterone levels significantly above normal female ranges?**

A. Are --- then no, sorry. It took me a little while to get there, but no.

**Q. Because the question was complicated and the answer was broken up I will ask you again, not to insult**

**you but so we have a clear record. I think I understood your answer but is there, in your opinion, any reason why advantages provided by testosterone level well outside normal female ranges should be treated as any more of an unfair advantage than the advantages that already exist among different women athletes?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: And as an expert I'm not rendering an opinion there, that's right.

BY ATTORNEY BROOKS:

**Q. Okay.**

**In paragraph 55 of your ---.**

ATTORNEY BLOCK: Would now be a good time for a break?

ATTORNEY BROOKS: Let me just ask this one question and then yes.

BY ATTORNEY BROOKS:

**Q. In paragraph 55 you cite a 2015 article by Joanna Harper?**

A. I do, yes.

**Q. Have you ever met Joanna Harper?**

A. I have.

**Q. And have you collaborated with Joanna Harper in any way?**

ATTORNEY BLOCK: Objection to the form.

THE WITNESS: Yeah, I don't, but I guess

--- it's a complicated answer, so I need to know what you mean by that.

BY ATTORNEY BROOKS:

**Q. I mean it broadly. Have you worked with her on any sorts of projects or committees?**

A. Well, we were both in the working group for World Athletics that helped develop this threshold.

**Q. And do you consider Doctor Harper to be knowledgeable in the field of sports physiology?**

A. I do.

**Q. And do you consider Doctor Harper to be knowledgeable with regard to the impact of testosterone suppression on athletic capabilities in male?**

A. So do I consider her to be knowledgeable in the field? I certainly do. For what it's worth, she is still Ms. Harper. She's actually in the Ph.D. program now.

**Q. Oh, okay. I just gave her an honorary degree.**

A. She occupies a prominent place in the field.

ATTORNEY BROOKS: Let's take that break.

VIDEOGRAPHER: Going off the record. The current time is 10:25 a.m. Eastern Standard Time.

OFF VIDEOTAPE

---

(WHEREUPON, A SHORT BREAK WAS TAKEN.)

---

ON VIDEOTAPE

VIDEOGRAPHER: We are back on the record. Current time reads 10:39 a.m. Eastern Standard Time.

BY ATTORNEY BROOKS:

**Q. Dr. Safer, let me ask you to go back to Exhibit 4 Professor Handelsman's article. And if you would turn in that article to page 805, the first paragraph begins the strongest classification in a league sport is that after puberty men 20 times more testosterone than women.**

**Do you see that language?**

A. I do.

**Q. And he discusses a number of results and ends his paragraph by saying in concert --- quote, in concert these render women on average unable to compete effectively against men in power based or endurance based sports.**

**Do you see that?**

A. I do.

**Q. And do you consider yourself qualified to evaluate Professor Handelma's assertion that women are**

1 on average unable to compete effectively against men in  
2 power based or endurance based sports?

3 A. No.

4 Q. Not qualified?

5 A. Not qualified, correct.

6 Q. Do you believe you have an understanding ---  
7 well, let me ask you this. Do you consider yourself  
8 qualified to offer any opinion as to why sports have  
9 been separated by sex historically?

10 A. I guess I would say I'm aware of the history.

11 Q. And in your understanding what is the reason  
12 that sports have been separated by sex historically?

13 A. The history is that at a certain point where  
14 sufficient development has taken place there is a  
15 differential in at least some sports between men and  
16 women --- between cisgender men and cisgender women such  
17 that in order for women to win those events reliably  
18 there needs to be a carve-out.

19 Q. And as you sit here today can you identify for  
20 me any sport in which you believe that cisgender men  
21 after puberty do not enjoy a significant performance  
22 advantage over cisgender women?

23 A. Yes.

24 Q. Please do.

1 A. Examples include --- well, I guess I better not  
2 get too far and be the expert here, but I believe  
3 riflery and others in the category of hand/eye  
4 coordination. I think some of the equestrian sports are  
5 examples.

6 Q. Okay.

7 You are not offering any opinion, are you, that  
8 the reason for separation of sports by sex is to affirm  
9 sex specific social roles or identities?

10 A. I'm not aware of that. I'm not an expert on  
11 those pieces, but I'm not aware personally.

12 Q. And it is not your opinion, is it, that  
13 separation of sport by sex is in general unfair?

14 ATTORNEY BLOCK: Objection to form.

15 THE WITNESS: So again, as an expert I'm  
16 not commenting on fairness.

17 ATTORNEY BROOKS: I'm going to mark as  
18 Safer Exhibit 5, a Decision in the arbitral award  
19 delivered in the Court of Arbitration for Sport in  
20 connection with the arbitration between Athletic South  
21 Africa and the IAAF, a bulky document, unfortunately.

22 ---

23 (Whereupon, Exhibit 5, Court of Arbitration  
24 for Sport Decision, was marked for

1 identification.)

2 ---

3 BY ATTORNEY BROOKS:

4 Q. And Doctor Safer, now that you have --- I asked  
5 you earlier about whether you had seen the arbitration  
6 decision and I think you said you might have read  
7 excerpts of it. Looking at it today, do you believe  
8 that you have ever seen a copy of the whole Decision?

9 A. I do not think I've read through the whole  
10 Decision.

11 Q. Do you think you've ever held this whole  
12 document in your hand before?

13 A. This is the first time that I held the whole  
14 document.

15 Q. I'm going to ask you about a few quotations in  
16 it, not to ask your opinions about the judgment but to  
17 elicit your opinions about the science. So if you would  
18 turn --- and the structure of the document is that  
19 everything in it has a paragraph number which, thank  
20 goodness, makes it easy to find things. So if you would  
21 turn to paragraph 556. The first sentence of  
22 paragraph 556 of this Decision reads there is no dispute  
23 that ensuring fair competition in the female category of  
24 elite competitive athletics is a legitimate objective

1 for the IAAF to pursue, closed quote. As a member of  
2 the IAAF Committee that established the policy that was  
3 challenged in this arbitration, do you agree or disagree  
4 that there is no dispute that ensuring fair competition  
5 in the female category is a legitimate objective for the  
6 IAAF to pursue?

7 ATTORNEY BLOCK: Objection to form.

8 THE WITNESS: As an expert I do not have  
9 an opinion.

10 BY ATTORNEY BROOKS:

11 Q. Okay.

12 Let me ask you to turn to paragraph 456. And  
13 this arbitration, as you noted, deals with the case of  
14 Caster Semenya and therefore with track events, not with  
15 riflery or with equestrian events. So I will ask your  
16 reaction to that context. In the middle of  
17 paragraph 456, beginning halfway through the sixth line  
18 the panel wrote, quote, suffice to say that post puberty  
19 generally speaking males outperform female athletes ---  
20 I'm sorry, male athletes outperform female athletes at  
21 an elite level. This difference is insurmountable,  
22 closed quote.

23 Do you see that?

24 A. I do.

**Q. And do you believe it to be true, false or outside of your expertise that male athletes outperform female athletes at the elite level at a difference that is insurmountable?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: As a blanket statement, no, I would say that is not my expertise.

BY ATTORNEY BROOKS:

**Q. Let me ask you to turn to 576. I said 576. I meant 577. I apologize. At the end of 577 the panel has written, quote, ---.**

ATTORNEY BROOKS: We just had static here, so let me ask whether people outside the conference room are hearing us? If somebody could unmute.

ATTORNEY TRYON: I can hear you.

ATTORNEY BROOKS: We just had some static that caused me concern.

BY ATTORNEY BROOKS:

**Q. At the end of paragraph 577 the panel wrote, quote, male athletes do not have to be elite to surpass even the very best female athletes. Dr. Berman pointed out that in a race such as the 800 meter, a 1.6 percent advantage, as calculated in BG17, was sufficient to**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So it depends on the event.

BY ATTORNEY BROOKS:

**Q. Why does it depend on the event?**

A. Well, there are events where we see --- as an elite Olympic event where the runners are virtually tied. And 1.6 percent then will be significant in the moment because that will be described in that field. And yet there are other events where people are far more spread out and there's greater --- in every element, then 1.6 percent advantage becomes lost in that noise.

**Q. And --- well, let's take competitive high school athletics, competitive high school track. Do you have an opinion as to 1.6 percent advantage in that context is significant or insignificant?**

A. I do not have an opinion.

**Q. So if I understand correctly, your point in some context you know that 1.6 percent is significant but that in other context you don't know one way or the other?**

ATTORNEY BLOCK: Objection to the form.

THE WITNESS: Yes, I guess I would say that in some context I can see that 1.6 percent is significant and then in other context I can see that 1.6

**determine first place by the region of nine meters, closed quote.**

**Do you see that language?**

A. Yes.

**Q. And do you consider it to be true, false or outside your expertise that male athletes do not even have to be elite to surpass the very best female athletes?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: In a --- as a blanket statement it is outside my expertise.

BY ATTORNEY BROOKS:

**Q. And do you have an opinion as to whether a 1.6 percent advantage is a significant advantage or insignificant advantage?**

A. I think that's too complicated as phrased for me to answer.

**Q. That's actually one of the simpler questions that I've asked today. Let me ask it again and ask you to think. Do you have an opinion, and if you --- one answer of course is I don't have an opinion or it is outside of my expertise, but do you have an opinion as to whether a 1.6 percent advantage in a track event is a significant advantage?**

percent does not appear to be significant. And actually even if you're asking as an expert, what even is significant is outside my purview, but with that understood I can still see that someone would say it one way and not say it the other way.

BY ATTORNEY BROOKS:

**Q. Let me ask you to turn to paragraph 357. And first I will ask you to turn to page 88, paragraph 351, just so you can see we're in a section summarizing the testimony of Professor David Handelsman. That begins at paragraph 351. And then I'm going to call your attention to paragraph 357 and it puts you to the statement there.**

357 includes a number of bullet points. The third bullet point, which is on page 91, reads --- and again this is --- the paragraph begins, quote, Professor Handelsman went on to explain in greater detail why the sex difference in circulating testosterone is the cause of the difference in athletic performance between men and women, and then there are bullet points. The third bullet point reads, on average, women have 50 to 60 percent of men's upper arm muscle cross-sectional area, 65 to 70 percent of men's thigh muscle cross-sectional area, 50 to 60 percent of men's limb

1 **strength and 60 to 80 of men's leg strength. Do you see**  
2 **that language?**

3 ATTORNEY BLOCK: Objection to form.

4 THE WITNESS: I do.

5 BY ATTORNEY BROOKS:

6 **Q. Do you have any knowledge as to whether those**  
7 **statistics are on correct as given by Dr. Handelsman?**

8 A. I do not.

9 **Q. And do you have any expert knowledge as to how**  
10 **those statistics do or do not change under the influence**  
11 **of testosterone suppression in natal males who**  
12 **experience a female gender identity?**

13 ATTORNEY BLOCK: Objection to  
14 terminology.

15 THE WITNESS: So I guess the --- I have  
16 no expert knowledge about these numbers, per se, but I  
17 do know as an expert that when testosterone levels are  
18 suppressed in transgender women and actually in  
19 cisgender men, anyone, that these numbers are decreased.  
20 And I can say that with confidence as an expert.

21 BY ATTORNEY BROOKS:

22 **Q. But you're not able to quantify that decrease.**

23 **Is that correct?**

24 A. I cannot quantify that decrease. The data gets

1 international federations with their rule making.

2 **Q. And do you consider Professor Coleman to be**  
3 **knowledgeable about the relative athletic capabilities**  
4 **and records of male and female athletes?**

5 A. To me that's too vague a question. She's a  
6 lawyer.

7 **Q. Are you aware also of her athletic background as**  
8 **a competitive athlete?**

9 A. I am.

10 **Q. And are you aware of her research and**  
11 **publications having to do with athletic records and**  
12 **capabilities of male and female athletes?**

13 ATTORNEY BLOCK: Objection to form.

14 THE WITNESS: I'm aware of some of her  
15 publications where she has co-authored, but she's not  
16 usually the physiology expert in the group.

17 BY ATTORNEY BROOKS:

18 **Q. Let me ask you to turn to paragraph 393. And if**  
19 **you look at the page you will see that this is within**  
20 **the tribunal summary of testimony of Professor Coleman.**  
21 **Let me ask you since you dealt personally with the**  
22 **professor, because I want the record to be respectful,**  
23 **does she in general use --- prefer to be referred to as**  
24 **Professor Lambelet-Coleman or simply Professor Coleman?**

1 murky when we start to get there.

2 **Q. Have you ever met Professor Coleman at Duke**  
3 **University?**

4 A. Doriane Coleman?

5 **Q. Yes.**

6 A. I have.

7 **Q. And in what context have you interacted with**  
8 **Professor Coleman?**

9 A. The --- a professional context.

10 **Q. Can you describe the context?**

11 A. We have served on some of these --- two of the  
12 same committees --- committee task force, whatever you  
13 call it, for World Athletics together.

14 **Q. Was she, in fact, on the committee which you**  
15 **participated that set the five nanomolar standard for**  
16 **the IAAF?**

17 A. I don't recall for sure but I think not.

18 **Q. Then can you identify for me the two committees**  
19 **that you recall that you did sit on with Professor**  
20 **Coleman?**

21 A. Subsequent to the initial group, and I don't  
22 know that it's two committees, it may be the same  
23 committee, they get renamed. Things like that happen.  
24 So it is --- I'm thinking forward to assisting other

1 A. I don't know the answer.

2 **Q. Okay.**

3 A. I prefer to her on a first name basis.

4 **Q. All right.**

5 **I will stick with the shorter version. In**  
6 **paragraph 393 the panel describing Professor Coleman's**  
7 **submission states, quote, Professor Lambelet-Coleman's**  
8 **report compared the lifetime best performance of three**  
9 **elite female athletes in the 400-meter event with the**  
10 **performance of male athletes in the same event during a**  
11 **single year, 2017, period. This showed not only that**  
12 **the elite females would have lost to the best men by a**  
13 **margin of about 12 percent but also that even at their**  
14 **absolute best the elite females would have lost to**  
15 **thousands of other boys and men by a much smaller**  
16 **margin, closed quote. Do you see that language?**

17 A. I do.

18 **Q. And do you have any reason to doubt the accuracy**  
19 **of that summary of athletic performance statistics?**

20 A. I can't render an expert opinion there.

21 **Q. Do you as you sit here today have any reason to**  
22 **doubt the accuracy of those statistics?**

23 A. Again, I cannot comment as an expert. I guess  
24 that's the bottom line.

**Q. If it is true that the most elite female athletes performing at their absolute best would lose to thousands of others boys and men. It is also true, would you not agree, that the very best female college athletes would lose to even a larger number of collegiate boys and men?**

A. If I'm speaking as an expert, then I'm not rendering an opinion there.

**Q. How about as a highly educated and intelligent professor?**

A. Simply in that context, it would be true that --- that it would least be true at some level in the elite levels of college.

**Q. And the very best female high school athletes would lose to an even larger number of high school boys.**

**Correct?**

A. So now I can render a little bit of an expert comment, which is that as you move down that line, the degree of difference falls because the degree of testosterone impact on body is evolving across those ages.

**Q. If it's true that the world fastest female athletes would lose to thousands of boys and men then it is inevitably true, is it not, Doctor Safer, to say that**

**the very best female high school athletes would lose to even larger numbers of high school boys?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So the --- it is the coils here. So it would be larger numbers of cisgender men in general, including people who are older than they are, but I'm not sure where that would be going.

BY ATTORNEY BROOKS:

**Q. Let me take you back to your expert report, Exhibit 1, and take you to paragraph 48. Actually, let me have the Declaration, which is Tab 50.**

ATTORNEY BROOKS: Let me mark as Safer Exhibit 6 a Declaration of Dr. Safer executed in May 10th, 2021.

---

(Whereupon, Exhibit 6, 5/10/21 Declaration of Dr. Safer, was marked for identification.)

---

BY ATTORNEY BROOKS:

**Q. And I apologize, it's paragraph 50. Dr. Safer, did you, in fact, prepare and execute this Declaration in the time leading up to May 26, 2021?**

A. Yes.

**Q. And you state in paragraph 48 that, quote, age, grade competitive sports records show minimal or no difference in athletic performance between non-transgender boys and non-transgender girls before puberty, and you cite Handelsman, the article that we have been looking at.**

**Correct?**

A. Yes.

**Q. And what research did you do to arrive at the conclusion that age grade competitive sports records show minimal or no difference in athletic performance between non-transgender boys and non-transgender girls?**

A. Is the question of original research on my part?

**Q. No, what steps did you take to arrive at that conclusion?**

A. Reading relevant literature.

**Q. You cited only Professor Handelsman's 2018 article. Did you read other literature that gave you comfort that is a true statement?**

A. I have read other literature, but I would suggest that Doctor Handelsman gave --- Doctor Handelsman's paper is the best summary of the point.

**Q. And again, in making this statement, what did you consider to be a minimal difference?**

A. When I'm thinking about this as a scientist it is a difference where I'm not sure if it is true or whether it is significant when defining the word minimum.

**Q. You just defined minimal by using the word significant. You force me to ask you what do you mean by significant?**

A. Sorry. So as a scientist --- well, there are two definitions of significant. So the one is that it is relevant for those --- for decision makers. And that actually gets outside of my expertise. And then we do use it as a term of art in science as well.

**Q. You meant statistically significant?**

A. The second would be statistically significant, that's right.

**Q. Dr. Safer, you deleted that sentence from your expert report.**

**Is that correct?**

A. I have to look.

**Q. I don't mean it to be a trick question. Let me ask you this. Do you recall removing that sentence as you revised your Declaration to create your expert report?**

A. No.

**Q. All right.**

A. I don't recall.

**Q. We will just move on to the science and not ask you deleted the question. Let me take you to paragraph 44 of your expert report, Exhibit 1. And just to be sure, you are on the expert report now and not the Declaration? They are so similar that it is easy to get confused.**

A. Yes.

**Q. Paragraph 44 you say in the second sentence, increased testosterone begins to affect athletic performance at the beginning of puberty, but those effects continue to increase each year of puberty until about 18, with the full impact of puberty resulting from the cumulative effect of each year. Do you see that language?**

A. I do.

**Q. And just to clarify, in making this statement what do you refer to as, quote, the beginning of puberty? And we're talking about male typical puberty in this discussion so as to clarify. So what do you have in mind as the beginning of male puberty?**

A. So the answer is complex. The typical male puberty is defined as beginning with what we label as

BY ATTORNEY BROOKS:

**Q. Cause has to precede effect?**

A. Cause in this case has to precede effect, exactly. But I caution that it is not clear that that's something that we could parse out medically in a given person in a reasonable way. That is I don't know that I could do a blood test and catch it as it were.

**Q. Okay.**

**Can you explain to me what you were referring to when you mentioned the cumulative effect of pubertal changes at the end of that sentence?**

A. Where are we now?

**Q. We are in the second sentence of paragraph 44 of Exhibit-1. And you say at the end with a full impact of puberty resulting from the cumulative effect of each year, and if you would explain for the Court what you meant by cumulative effect that would be helpful.**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So the testosterone has impact on certain tissues, and then it continues to have impact on tissues. And I don't know that I have any greater explanation for the right cumulative impact.

BY ATTORNEY BROOKS:

**Q. So your point is that by the age of 18 whatever**

Tanner 2. And in terms of when you would see impact on athletic performance, per se, is not well established.

**Q. And now stretching that in both directions, on the one hand Tanner Stage 2, if I'm correct, is essentially defined as certain first observable physical changes in a boy's body.**

**Right?**

A. Tanner 2 is specifically defined as specific observable changes in a person's body, yes.

**Q. And therefore, testosterone levels have begun to increase even before the first observable changes that result.**

**Correct?**

A. The way it's understood in medicine is it is reflective of existing reality. So it is not necessarily --- you know, only in the absolute.

**Q. Well, as a medical doctor, you would agree with me or would you not that testosterone levels must increase in the body before observable changes in the body caused by testosterone can be --- can come about?**

ATTORNEY BLOCK: Objection to the form.

THE WITNESS: So it must be the case that the testosterone levels would have to rise prior to their having a noticeable effect, that is true.

**advantages in athletic performance a particular male has is due to body changes that have happened each year since puberty began, not due simply to the testosterone level of that individual at age 18?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: The meaning isn't as --- I guess I would be careful about overstating it, so there can --- there might be some impact earlier and then there might be additional impact over time, but --- and so in the absolute it would be true to say that all of the effect doesn't occur at Tanner 5, which is the defined end.

BY ATTORNEY BROOKS:

**Q. Okay.**

**The cumulative physiological changes that you are referring to here result from a multi-year history of male typical levels of testosterone by age 18.**

**Correct?**

A. Yes. Well, even that is --- there's complexity but yes.

**Q. You say --- sorry, we are jumping back and forth.**

A. Actually, just continuing a little bit further, it's also about age 18 is not a trivial word.

**Q. Understood. And I simply used that as a representative end marker and for some individuals it would be earlier and for some individuals it would be later.**

**Correct?**

A. That's right, even with the college athletes.

**Q. You state at the beginning of paragraph 44 that, quote, the concerns that animated the World Athletics and prior IOC policies are even more attenuated for students in the middle of high school where athletes typically range from 11 to 18.**

**Do you see that?**

A. I do. Was this paragraph 44?

**Q. It is. And by attenuated you mean the same in nature but smaller in scale.**

**Correct?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: Yeah, I can't even say that so --- yeah, I can't ---.

BY ATTORNEY BROOKS:

**Q. Isn't that what attenuated means?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: Attenuated is both in scale and type in this case.

**Q. In paragraph 49 of your expert report you write in the third full sentence, quote, West Virginia categorically prevents girls who are transgender from participating on girls teams regardless of whether they are prepubertal, receiving puberty blockers, or receiving gender-affirming hormone therapy, closed quoted. Do you see that?**

A. I do.

**Q. What in your opinion is the significance of that statement? What is your point?**

ATTORNEY BLOCK: Objection. Could you just give him some time to read the context?

BY ATTORNEY BROOKS:

**Q. Yes.**

A. So I guess I maybe make the --- help me with where you're going with that question. I'm --- the rule as written includes all transgender girls.

**Q. Are you --- did you mean to suggest that medical science would dictate that the West Virginia law should make an exception for natal males who have suppressed puberty?**

ATTORNEY BLOCK: Object to form.

THE WITNESS: The context for the --- the context of different transgender girls with different

BY ATTORNEY BROOKS:

**Q. All right.**

**You are not here or anywhere denying that the same type of concern, that is physiological advantages, exist at for instance age 15?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So sorry, say that again.

BY ATTORNEY BROOKS:

**Q. You are not in this paragraph or anywhere offering an opinion that the same type of concerns, that is physiologic or in performance advantages, exist to some degree at, for instance, age 15?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: I'm not offering an opinion there, that's right.

BY ATTORNEY BROOKS:

**Q. And the same is true at age 13?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: I'm not --- so I guess as we --- as you move along to the continuum, then ---.

BY ATTORNEY BROOKS:

**Q. It gets more attenuated?**

A. The opinion --- right, the opinion shifts because it depends on context.

degrees of treatment and different stages of puberty are different. I guess that's as much I would say. I'm not expressing an opinion about what the --- I'm serving here just as a scientist in terms of what the --- what the --- what we know about athleticism.

BY ATTORNEY BROOKS:

**Q. You are not offering an opinion that either science or reasonableness requires that West Virginia's laws make an exception for natal males who have suppressed puberty?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: I'm not offering an opinion that that would be --- that would be a logical law for transgender girls in that circumstance.

BY ATTORNEY BROOKS:

**Q. And in the article that we began today looking at you expressed concern about policies that would create incentives for children to begin puberty blockers, would you not?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So earlier in my --- I reference that as a concern. I want to be clear that as an expert I'm not suggesting that --- I'm not suggesting an expert opinion that these needs to be concerns. I'm

1 raising the issues that we are considering.

2 BY ATTORNEY BROOKS:

3 **Q. Well, what you wrote to educate your colleagues**  
4 **as an endocrinologist, you, Professor Safer, raise that**  
5 **as a concern?**

6 ATTORNEY BLOCK: Objection to form.

7 THE WITNESS: To be clear, I raised it as  
8 a concern of the community. I did not take an opinion  
9 in that article that it was a concern that I was  
10 offering as an expert.

11 BY ATTORNEY BROOKS:

12 **Q. Well, let me ask you as a medical doctor sitting**  
13 **here today, an endocrinologist, it would cause you**  
14 **concern, would it not, that policies are adopted that**  
15 **created incentives for children to start puberty**  
16 **blockers when they might otherwise not choose to do so?**

17 ATTORNEY BLOCK: Objection to form and to  
18 scope.

19 THE WITNESS: It's too broad of a  
20 question as you're asking it because there is certainly  
21 --- in medicine it is certainly the case that we fear  
22 coercing people to certain treatments and certain  
23 circumstances but they are certainly alternate examples  
24 where we very much coerce people to have certain medical

1 terminology?

2 THE WITNESS: And if I said the word best  
3 maybe that's not the best way of saying it, but it's a  
4 very clean, well-written summary of the circumstance.

5 BY ATTORNEY BROOKS:

6 **Q. At any rate, it's the one that you chose to**  
7 **cite?**

8 A. And it is the one that I chose to cite.

9 **Q. I'm going to give you a three by five card to**  
10 **help read a chart that doesn't have grid lines on it so**  
11 **you have a straight edge. And I want to take you in**  
12 **Handelsman's 2018 article, Exhibit 4, to page 813 and**  
13 **figure one. And you've familiar with this figure and**  
14 **these curves, are you not?**

15 A. I am, yes.

16 **Q. When you studied this article carefully this is**  
17 **part of what you studied.**

18 **Right?**

19 A. It is.

20 **Q. And these charts show percentage performance**  
21 **advantage of males over females and just to simplify**  
22 **terminology I believe there's nothing in here about**  
23 **dealing with transgender individuals in these charts.**  
24 **So with your permission I'll simply use male and female**

1 interventions. And so as an expert I have no opinion,  
2 as we said already. And simply as somebody trying to be  
3 logical and thoughtful I can come up with examples in  
4 both certain circumstances.

5 BY ATTORNEY BROOKS:

6 **Q. I'm going to ask you to take Exhibit-6 --- no,**  
7 **Exhibit 4, the Handelsman article if you would.**

8 A. Yes.

9 ATTORNEY TRYON: Roger, would you speak  
10 up a little more, please? And Josh, when you shuffle  
11 your papers, it really garbles the testimony. If you'd  
12 be a little more careful about that, I'd appreciate it.

13 ATTORNEY BLOCK: Sorry.

14 ATTORNEY BROOKS: It's a crowded table  
15 and we have papers bumping up against the mic. So just  
16 call out if we do that wrong.

17 BY ATTORNEY BROOKS:

18 **Q. So Dr. Safer, you pointed to the Handelsman**  
19 **article as the best source on the proposition --- on the**  
20 **question to what extent if any natal male has**  
21 **physiological or I should say athletic performance**  
22 **advantages over natal females before puberty.**

23 **Correct?**

24 ATTORNEY BLOCK: Objection to

1 **to be the dare I say simple biological designations as**  
2 **we had previous discussions. Is that acceptable?**

3 A. I think so.

4 **Q. If it's something that comes up ---.**

5 A. I will mention it, yes.

6 **Q. I don't think it will in this discussion. First**  
7 **of all, would you agree with me that, generally**  
8 **speaking, junior high contemplates grades 7 through 9**  
9 **and commonly ages in the range of 12 to 15?**

10 ATTORNEY BLOCK: Objection to form.

11 THE WITNESS: Junior high is grades 7  
12 through 9. It used to be. Now there is Middle School.  
13 BY ATTORNEY BROOKS:

14 **Q. I know?**

15 A. Exactly.

16 **Q. Let's just work with you and I are of general**  
17 **age. So Junior High is 7 to 9?**

18 A. Okay.

19 **Q. And in your general understanding, this is**  
20 **layman's stuff, not expert stuff, that is ages 12 to**  
21 **15-ish?**

22 A. Let's see, seven --- let me think about this.  
23 Right, 15 at about the max, right, because there is  
24 about 14.

**Q. And high school is 14, 15 through age 18-ish. Some people graduate at age 17?**

A. Yes. As a non-expert I would believe, yes.

**Q. All right.**

**And this chart charts the percentage advantage enjoyed --- on average enjoyed by males over females in three different events at over --- on a year by year basis from ages 10 up to 19.**

**Am I describing it correctly?**

ATTORNEY BLOCK: Objection to form. Just for the record, it's percentage differences, not percentage advantages.

BY ATTORNEY BROOKS:

**Q. Correct, it says --- it says gender difference percentage to read the Y axis.**

A. Clear, yes.

**Q. Okay.**

**So let's look at running and you have your straight edge if it is helpful to you. At age 12, what, according to Dr. Handelsman, is the gender difference in running performance?**

A. So in this paper there is a range. But just to help you get to your point faster I guess we can --- it is about five percent of tab over.

THE WITNESS: So the problem here with going right to this figure is it's including a range of inputs, and so this is --- so these are what are called cross-sectional studies, and so the --- if your question is just in the narrow point of this five percent minimal, well, even there I don't know that I can comment because it depends on how broad the variation is among the group.

BY ATTORNEY BROOKS:

**Q. And what gender difference did Dr. Handelsman report in running at age 15?**

A. At age 15, a range that is hovering about 9 to 10 percent.

**Q. And by age 15, according to his sample, the gender difference is approached --- begins to level off. In other words, it has --- most of the gender difference has been achieved at age 15.**

**Correct?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: Among this data in this study set, yes, I will agree with you it does level off.

BY ATTORNEY BROOKS:

**Q. So let me ask you this. Do you have an understanding of the physiological basis of what you**

**Q. And for reasons best known to Professor Handelsman, his arrow bars extend only upwards, correct, in this chart?**

A. Right. I will have to attribute that to cleanliness of the figure.

**Q. Or if he has chosen to fit his curve to the bottom end of this error range possibly?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: Yeah, I can't comment there, but that wouldn't be usual.

BY ATTORNEY BROOKS:

**Q. That would not be usual, I agree. And what advantage --- what gender difference between male and female does Professor Handelsman report at age ten approximately?**

A. At age ten in the particular figure that we are referencing it is --- the average is --- well, actually, so here it ranges from about two percent because that is probably how the air bars are meant to be up to just a little north to three percent.

**Q. And going back to age 12, do you consider a five percent difference between male and female performance to be minimal?**

ATTORNEY BLOCK: Objection to form.

**described as a two to three percent male advantage at age ten in running?**

ATTORNEY BLOCK: Objection to form.

BY ATTORNEY BROOKS:

**Q. If any?**

A. So speaking as an expert, there's no --- there is no physiological --- there is no expectation of a physiological explanation. And there is awareness of other confounders in terms of experience, exposure to sport and things like that.

**Q. Let me ask you to look at jumping, at age ten. And this is --- at age ten what performance of gender difference advantage did Dr. Handelsman report for boys in jumping?**

A. So at age ten it would go on --- so at age ten then the range ---.

**Q. This by the way tells us that he cannot be inclined in arrow bar --- a symmetrical arrow bar below.**

**Correct?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So he can't. In fact, the range that he's showing there goes from an advantage for girls --- that is it goes below to an advantage --- for boys. The range is included and it just --- for both

1 sexes.

2 BY ATTORNEY BROOKS:

3 **Q. So what is the average advantage that he reports**  
4 **at age ten for boys?**

5 A. So in this dataset the average is about a six  
6 percent average for boys, but it is important to  
7 understand the data. And the data that --- the point  
8 being that if we were to repeat the study you would  
9 anticipate that that average would fall across those  
10 entire --- the entire range shown so that in a different  
11 day it might show a bigger advantage for boys, but a  
12 different day it might also show an advantage for girls  
13 about higher.

14 **Q. Are you aware of any dataset that shows a**  
15 **smaller advantage in jumping for girls at age ten?**

16 A. Off the top of my head I cannot guide --- lead  
17 you to a dataset.

18 **Q. At age 12 what advantage in jumping --- well,**  
19 **let me start over. At age 12 what advantage in jumping**  
20 **does Dr. Handelsman report for boys?**

21 A. So in this dataset at age 12 he shows the  
22 advantage --- the average advantage to be of the less  
23 than the average advantage for age ten, but this exactly  
24 points to the caution that I was referencing, which is

1 that the range of possibilities that you might  
2 anticipate based on this particular dataset at age 12  
3 has a range of four to six percent advantage for boys.

4 **Q. The arrow bar has tightened up a lot?**

5 A. The arrow bar in that age range is tighter.

6 **Q. And do you consider a six percent advantage to**  
7 **be minimal?**

8 ATTORNEY BLOCK: Objection to form.

9 THE WITNESS: As an expert I can't answer  
10 that because it depends on context on the heterogeneity  
11 of all these events.

12 BY ATTORNEY BROOKS:

13 **Q. And at age 15 what average advantage in jumping**  
14 **did Dr. Handelsman report for boys?**

15 A. For age 15 he has a range or the average sits at  
16 15 percent and the range runs from about 14 percent to  
17 maybe 17 percent.

18 **Q. Is there any context in your opinion, any**  
19 **athletic endeavor that involves jumping in which a 15**  
20 **percent advantage is in your view minimal?**

21 ATTORNEY BLOCK: Objection to form.

22 THE WITNESS: Yes, I think as an expert I  
23 can't answer that. If you're thinking at the scholastic  
24 level where there is a wide range of --- where there's a

1 quite wide range of heterogeneity in development, body  
2 type, et cetera, I certainly could envision a situation,  
3 yes.

4 BY ATTORNEY BROOKS:

5 **Q. Dr. Safer, in your Declaration filed in May you**  
6 **stated that before puberty athletic advantage by boys**  
7 **was minimal. Do you recall that language?**

8 A. The way I would say it is the difference between  
9 boys and girls before puberty is minimal or  
10 non-existent. I don't know if I could be wiser than  
11 that.

12 **Q. All right. But now you are telling me when I**  
13 **asked you questions about minimal that you as an expert**  
14 **are not able to define minimal. How do you reconcile**  
15 **those two?**

16 ATTORNEY BLOCK: Objection to form.

17 THE WITNESS: So the definition of  
18 minimal is in context. And so as we discussed it was  
19 not a significant difference using both those  
20 definitions that we already used were no different at  
21 all.

22 BY ATTORNEY BROOKS:

23 **Q. Your statement in your Declaration simply**  
24 **asserted categorically in almost no context that the**

1 **difference in athletic capability of boys to girls were**  
2 **both minimal. My question for you is using whatever**  
3 **definition you had in mind when you wrote that do you**  
4 **consider a --- I will look at jumping, a five percent**  
5 **difference in capability to be minimum?**

6 ATTORNEY BLOCK: Objection to form and  
7 characterization of the report.

8 THE WITNESS: So it's a context. So in  
9 the report the reference is to prepubertal children.  
10 And there it is easier to be more categorical. Where  
11 now we're moving into an area where there is --- where  
12 things are more complex and so it is a harder context to  
13 make that statement.

14 BY ATTORNEY BROOKS:

15 **Q. That is a sample of ten-year old boys includes**  
16 **some who are no longer prepubertal.**

17 **Correct?**

18 A. No. I'm saying it more the other way, which is  
19 a sample of ten-year-old boys would overwhelmingly be  
20 prepubertal but a sample of 15-year-old boys would have  
21 more of a range and have more heterogeneity. And  
22 there's more to it even than that, which is the  
23 definition of minimal also includes the context of the  
24 entire population who participated in the sport.

**Q. So focusing on ten-year-old boys and jumping you said at age ten the large majority of boys are, according to your definition, prepubertal. Referring back to Declaration and the meaning that you ascribed to the word minimal there, in your view, is a six-percent difference in capability minimal or not minimal?**

ATTORNEY BLOCK: Objection to form and to talking about his Declaration without it being in front of him.

ATTORNEY BROOKS: He has it in front of him and we already looked at the language.

BY ATTORNEY BROOKS:

**Q. You may answer.**

A. So the graph that we are looking at includes arrow bars that include the possibility that boys would have --- that the girls would have a superior outcome, and so the answer then becomes, yes. Where the data are either small or are suspect or not significant, then all of that collectively certainly is --- would be included as minimal to non-existent.

ATTORNEY BROOKS: Let me mark as Exhibit Safer 7 a paper by Emma Colton and Tommy Lundsburg entitled Transgender Women in a Female Category of Sport, from 2021, previously marked as Exhibit 13 at Dr.

**original research or as more of a literature review paper?**

A. I don't recall them reporting on their original research, but I would have to look. It's mostly a review paper.

**Q. That is also my impression. I just didn't want to create a different impression. Let me ask you to turn to page 201, and there in the first column beginning six lines down there is a sentence that begins an extensive review. Let me ask you to find that.**

A. I have it.

**Q. And that --- I'll read it into the record. Quote, an extensive review of fitness data from over 85,000 Australian children age 9 to 17 years old showed that compared with nine-year-old females, nine-year-old males were faster over short sprints, 9.8 percent, and one mile, 16.6 percent, could jump 9.5 percent farther from a standing start, which tested explosive power, could complete 33 more push-ups in 30 seconds and have 13.8 percent stronger grip. Male advantage of a similar magnitude was detected in a group study of children where compared to a six-year old females six-year old males competed 16.6 percent more shuttle runs in a given time and could jump 9.7 percent further from a standing**

Adkins's deposition.

---

(Whereupon, Exhibit 7, Transgender Women In a Female Category of Sport, was marked for identification.)

---

BY ATTORNEY BROOKS:

**Q. And first, Professor Safer, let me ask whether you're familiar with this paper published last year?**

A. I am familiar.

**Q. And have you interacted professionally with either Dr. Colton or --- and I don't know his degree, Mr. Lundsburg in any context?**

A. Here I don't remember.

**Q. Okay.**

**Do you believe that you became aware of this paper soon after it was published?**

A. I don't know if I can answer that cleanly either, but I certainly have become aware of it somewhere between then and now.

**Q. And have you read it with some care?**

A. I have read it with some care, yes.

**Q. Let me ask you --- well, let me ask you this first. Would you describe this paper as reporting**

**position. Do you see that language?**

A. I do.

**Q. And on the Australian study, if you follow the footnote you will see that it references a study by Kaitlin Thompkinson. That's footnote 22. And my first question is have you read the reference study by Kaitlin Thompkinson?**

A. I don't recall. I'm guessing yes.

**Q. All right. All right.**

**Do you have any reason to doubt the accuracy of this summary of the findings of Kaitlin Thompkinson based on data from over 85,000 Australian children?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: I think the important thing to recognize when you look at these sorts of data are recognizing the multiple inputs. So the larger these groups --- these cross-sectional studies get the more confounded they get by access and other social explanations why there are boys participating in sports to a greater degree.

BY ATTORNEY BROOKS:

**Q. So putting aside causation, which might be physiological and might be cultural, as you said there could be various causes, do you have any reason to doubt**

1 **the accuracy of the findings of performance advantage**  
2 **summarized here in the passage that I've just read?**

3 ATTORNEY BLOCK: Objection to form and  
4 terminology.

5 THE WITNESS: Putting aside causation, I  
6 have no --- I can't offer an expert opinion I guess if  
7 that's the bottom line. But if you're asking me just as  
8 an individual, I'm not expecting that they're  
9 fabricating that data. I am not expecting that.

10 BY ATTORNEY BROOKS:

11 **Q. And you agree that advantages on a scale of 9**  
12 **percent, 16 percent could provide a significant**  
13 **advantage in athletic competition, do you not?**

14 ATTORNEY BLOCK: Objection to  
15 terminology.

16 THE WITNESS: So say that question again.

17 BY ATTORNEY BROOKS:

18 **Q. You agree that advantages on the scale of**  
19 **9.8 percent or 16.6 percent would provide a large**  
20 **advantage in athletic competition, do you not?**

21 ATTORNEY BLOCK: Same objection to  
22 terminology.

23 THE WITNESS: In elite athletic  
24 competition, yes.

1 **important. So if you need a break, we'll take a break.**

2 A. So I'm good.

3 ATTORNEY BROOKS: Well, obviously, if  
4 anybody wants a break, we can take a break.

5 ATTORNEY BLOCK: Do you need a break?

6 ATTORNEY SWAMINATHAN: No.

7 ATTORNEY BLOCK: We are good.

8 THE WITNESS: So my rebuttal.

9 BY ATTORNEY BROOKS:

10 **Q. Your rebuttal, which is Exhibit 2, so it's**  
11 **probably at the bottom. And in that I'm going to draw**  
12 **your attention to paragraph 11. And there you wrote**  
13 **there is also no basis to confidently predict the**  
14 **patterns about the athletic performance of prepubertal**  
15 **cisgender boys will be the same for prepubertal**  
16 **transgender girls, closed quote. Do you see that?**

17 A. I do.

18 **Q. And let me attempt to see if I understand the**  
19 **point of this paragraph. And indeed, if you would like**  
20 **to read the whole paragraph you should. But my**  
21 **understanding of the point is that you're saying that**  
22 **even if prepubertal boys have some performance, some**  
23 **statistically significant performance advantage over**  
24 **prepubertal girls, that you are not confident that the**

1 BY ATTORNEY BROOKS:

2 **Q. Did you play any sport in high school?**

3 A. At a sophisticated level I did not.

4 **Q. Your general knowledge permits you to say, does**  
5 **it not, that at the high school level also a 9.8 percent**  
6 **or a 16.6 percent advantage is a very large advantage?**

7 ATTORNEY BLOCK: Objection to form and  
8 terminology?

9 THE WITNESS: So there it gets more  
10 diffuse, therefore, and I can't answer as an expert.

11 BY ATTORNEY BROOKS:

12 **Q. Can you answer as an informed adult citizen?**

13 ATTORNEY BLOCK: Same objection.

14 THE WITNESS: So as an expert for sure  
15 not. As an informed adult, it falls back to the same  
16 situation. When there is a wide range of athletes in a  
17 certain context, then it is going to seem less relevant.  
18 And obviously with the example I gave before with an  
19 elite circumstance where that --- it describes the  
20 entire field is more significant.

21 BY ATTORNEY BROOKS:

22 **Q. Let me ask you to find your rebuttal report.**

23 A. And actually --- do others need a break?

24 **Q. Any time --- your concentration is most**

1 **athletic performance capabilities of natal males who**  
2 **identify as females before puberty will be the same as**  
3 **those of natal males who identified as male before**  
4 **puberty?**

5 ATTORNEY BLOCK: Objection to the  
6 terminology.

7 THE WITNESS: So to the extent --- so  
8 were differences to be determined between cisgender boys  
9 and cisgender girls, it is correct to say that that  
10 won't conclusively demonstrate that the same applies for  
11 transgender girls. That's right.

12 BY ATTORNEY BROOKS:

13 **Q. Now, elsewhere in your writings you have said**  
14 **that it is well known that the majority of prepubertal**  
15 **children who experience gender dysphoria do not persist**  
16 **in that dysphoria into pubertal adolescence.**

17 **Correct?**

18 ATTORNEY BLOCK: Objection.

19 THE WITNESS: No.

20 BY ATTORNEY BROOKS:

21 **Q. Not correct?**

22 A. Not correct.

23 **Q. Then we will come back to that. In this**  
24 **paragraph 11, you speculate a little farther down that,**

1 **quote, the experience of transgender girls might be more**  
 2 **similar to the experience of cisgender girls?**

3 ATTORNEY BLOCK: Objection to the  
 4 characterization and speculative.

5 BY ATTORNEY BROOKS:

6 **Q. Well, by using the word might you meant to**  
 7 **indicate, did you not, Dr. Safer, this is a hypothesis,**  
 8 **this is not a documented fact?**

9 A. That if the question is do I know that the  
 10 experience of transgender girls is definitely in this  
 11 circumstance the same as cisgender girls, that's right,  
 12 I don't know that. It only might be true.

13 **Q. And towards the end, in the last line, you refer**  
 14 **to potential biological underpinnings of gender**  
 15 **identity. Again, the word potential signaling that no**  
 16 **such specific underpinnings have yet been identified.**

17 **Correct?**

18 A. Say that question again.

19 **Q. In the last line, your reference to, quote,**  
 20 **potential biological underpinnings of gender identify,**  
 21 **by the word potential you are indicating that no**  
 22 **specific biological underpinning has yet been**  
 23 **identified.**

24 **Correct?**

1 ATTORNEY BLOCK: Objection to form.

2 THE WITNESS: So it's --- so no,  
 3 potential in this context does reference that most of  
 4 this biology is unknown, so that part is true, but it  
 5 doesn't mean that there is nothing known.

6 BY ATTORNEY BROOKS:

7 **Q. You do not propose to offer any opinion that**  
 8 **natal males --- let me strike that and start again.**

9 **You do not propose to offer any opinion, do**  
 10 **you, that prior to puberty natal males who identify as**  
 11 **female are less athletic capable on average than natal**  
 12 **males who identify as male?**

13 ATTORNEY BLOCK: Objection to form.

14 THE WITNESS: I'm not offering an opinion  
 15 with regard to cisgender --- excuse me --- cisgender  
 16 boys versus transgender girls and their athleticism when  
 17 they are prepubertal. If that's what you are asking,  
 18 then yes, I'm not offering an opinion between those two  
 19 groups. I'm simply raising the possibility that  
 20 something like biology associated with transgender could  
 21 have influence into it.

22 BY ATTORNEY BROOKS:

23 **Q. Let me ask you to turn to paragraph 22 of your**  
 24 **rebuttal report. And there you write Doctor Brown also**

1 **refers to widely publicized anecdotes about isolated**  
 2 **cases of transgender girls and women state championships**  
 3 **in high school sports or NCAA championships in college.**  
 4 **Do you see that?**

5 A. I do.

6 **Q. And you go on to write but transgender athletes**  
 7 **of women have been competing in NCAA and secondary**  
 8 **school athletics for many years at this point, closed**  
 9 **quote. Do you see that language?**

10 A. I do.

11 **Q. Let me ask you to name all instances of male**  
 12 **males known to you who have competed in women's division**  
 13 **varsity athletics in any athletic endeavor for any NCAA**  
 14 **member school?**

15 ATTORNEY BLOCK: Objection to form and  
 16 scope.

17 THE WITNESS: Right, so I certainly can't  
 18 do that usefully off the top of my head, name  
 19 transgender women and all these context in such an  
 20 exhaustive way like that.

21 BY ATTORNEY BROOKS:

22 **Q. Well, I asked you accused Doctor Brown of citing**  
 23 **isolated cases. Do you have any basis to assert that he**  
 24 **has done anything other than cite all cases in which**

1 **natal males have competed in NCAA athletics in the**  
 2 **female category?**

3 A. So the --- if our focus is on the word isolated  
 4 then per se they are all --- these are all isolated  
 5 cases. These aren't systematic analyses of any cohort  
 6 of people.

7 **Q. You are not accusing Doctor Brown of picking and**  
 8 **choosing?**

9 ATTORNEY BLOCK: Objection to form.

10 THE WITNESS: So let me think about that.  
 11 By simply choosing individual cases that are in the  
 12 press then it is by its nature picking and choosing.  
 13 BY ATTORNEY BROOKS:

14 **Q. What do you mean by that?**

15 A. Well, these are simply individual cases that  
 16 have --- that have come to public attention, and so I  
 17 --- so --- and that's the basis of my statement as  
 18 opposed to some exhaustive attempt to identify  
 19 transgender people in a systematic fashion.

20 **Q. As you sit here today, Dr. Safer, are you aware**  
 21 **of a single case not mentioned by Doctor Brown in his**  
 22 **report of a natal male who has competed in NCAA**  
 23 **athletics in the women's category?**

24 ATTORNEY BLOCK: Objection to form.

1 THE WITNESS: Can I name somebody off the  
2 top of my head? I cannot.

3 BY ATTORNEY BROOKS:

4 **Q. Do you have any concrete --- leaving aside**  
5 **whether you remember a precise name, do you have any**  
6 **factual basis to know that Doctor Brown has omitted any**  
7 **case of a natal male who has competed in the female**  
8 **division of NCAA athletics?**

9 ATTORNEY BLOCK: Objection to form.

10 THE WITNESS: So I guess if the question  
11 is what can I do off the top of my head, then I cannot.

12 BY ATTORNEY BROOKS:

13 **Q. Off the top of your head, you recall the case of**  
14 **June Eastwood, do you not?**

15 A. You have to remind me what that is.

16 **Q. A runner in Montana?**

17 A. I actually would need to be reminded of those  
18 details.

19 **Q. All right. Certainly you recall Lia Thomas**  
20 **because none of us can mis Lia Thomas these days?**

21 A. Lia Thomas is still in the news.

22 **Q. Do you recall the case of CeCe Telfer?**

23 A. Names are not my strength.

24 **Q. All right. No more on that.**

1 **You say at the end of this paragraph, quote,**  
2 **the occasional championship that has been widely**  
3 **publicized do not come close to constituting the rates**  
4 **one would expect if they, that is transgender athletes,**  
5 **wanted rates that are proportional to their overall**  
6 **percentage of the population, which is approximately one**  
7 **percent. Do you see that language?**

8 A. I do.

9 **Q. Do you have any knowledge as to what --- first**  
10 **of all, let me ask, what is your basis for believing**  
11 **that the current student population in college and high**  
12 **school level is approximately one percent transgender?**

13 A. The statistic for the percentage of the  
14 population who are transgender comes from surveys.

15 **Q. And do you have any knowledge at all as to what**  
16 **percentage of varsity athletes in America today at the**  
17 **NCAA --- among NCAA member schools in the women's**  
18 **division are transgender?**

19 A. If the question is that a survey in that  
20 population, I'm not aware of a survey that's been done.

21 **Q. So you don't know whether the number of**  
22 **victories of championships that have been taken in the**  
23 **women's division by transgender competitors is higher or**  
24 **lower than the percentage of athletes in those divisions**

1 **who are transgender?**

2 ATTORNEY BLOCK: Objection to form.

3 THE WITNESS: That is correct. I do not  
4 know the percentage that --- what we know is the  
5 percentage of transgender people and then we know the  
6 percentage of identified athletes winning competitions.  
7 And even then we don't know that absolutely. We only  
8 know the ones that are publicized. But, right, in the  
9 in between, we don't have statistics. That's right.

10 ATTORNEY BROOKS: Counsel, I'm going to  
11 suggest --- in my experience, if we break for lunch at  
12 noon, it makes it a little long afternoon. So I would  
13 suggest that we take a short break now and then keep  
14 going until like 12:45 or something. It's seven hours  
15 on the clock and I'm here just to tell you that the  
16 afternoon gets long. So unless you are starving I'd  
17 recommend ---?

18 THE WITNESS: No, I think that's a great  
19 idea.

20 ATTORNEY BROOKS: Take a short break now.

21 THE WITNESS: So you don't know who is on  
22 the phone so give them a break.

23 ATTORNEY BROOKS: Let's go off the  
24 record.

1 VIDEOGRAPHER: Going off the record. The  
2 current time reads 12:01:00 p.m. Eastern Standard Time.  
3 OFF VIDEOTAPE

4 ---

5 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

6 ---

7 ON VIDEOTAPE

8 VIDEOGRAPHER: Back on the record.

9 Current time reads 12:14 p.m. Eastern Standard Time.

10 ATTORNEY BROOKS: Let me mark as Safer  
11 Exhibit 8 the Endocrine --- Treatment of Gender  
12 Dysphoric Gender Incongruent Persons, an Endocrine  
13 Society Clinical Practice Guidelines from 2017  
14 previously marked as Adkins Exhibit 4.

15 ATTORNEY WILKINSON: Tab 5.

16 ---

17 (Whereupon, Exhibit 8, Endocrine Society  
18 Guidelines, was marked for identification.)

19 ---

20 BY ATTORNEY BROOKS:

21 **Q. And Doctor Safer, am I correct you served the**  
22 **committee that created this revised version of the**  
23 **Endocrine Society's Guidelines?**

24 A. Yes.

Page 114

**Q. And is it reasonable for me to assume therefore that you are familiar with it in some detail?**

A. I am familiar with it in some detail.

**Q. They also pertain to your practice?**

Am I correct.

A. And they do pertain to my practice, yes.

**Q. Let me ask you to turn in Exhibit-5 to Page 3879 --- Exhibit 8, 3879. And there I will call your attention to the specific recommendation that's numbered 1.4. And it says there we recommend against puberty blocking and gender-affirming hormone treatment in prepubertal children with GD/gender incongruence.**

Do you see that?

A. I do.

**Q. And then there is a section headed evidence, right?**

A. Yes.

**Q. And the first statement in the sentence that is --- in the section headed evidence is, quote, in most children diagnosed with GD/gender incongruence it did not persist into adolescence, closed quote.**

Do you see that?

A. I do.

**Q. Do you believe that to be a false statement?**

Page 116

transgender kids with these sorts of labels.

BY ATTORNEY BROOKS:

**Q. Well, recommendation 1.4 says we recommend against puberty blocking and a gender hormone treatment in prepubertal children with gender dysphoria or gender incongruence. Do you have an understanding of why these Endocrine Society guidelines of which you're a co-author recommended against puberty blocking in prepubertal children?**

A. Yes.

**Q. Why?**

A. They have no impact.

**Q. Can you point me to anywhere in the evidence discussion that suggests that is the reason for this recommendation?**

A. I don't know. Let me look.

**Q. The evidence discussion is just two paragraphs.**

ATTORNEY BLOCK: I just want to object to the extent you're limiting his review to the evidence section.

BY ATTORNEY BROOKS:

**Q. My question pertains to the evidence section.**

A. So those two paragraphs are both primarily referencing 1.3 and not 1.4.

Page 115

A. I wouldn't --- I guess it depends on context here too. So as of when this was written, the literature being referenced had a broader diagnosis for gender dysphoria and gender incongruence or really gender dysphoria is the label that was being used and still is. Gender incongruence is where we are headed. And so with that broader definition, that included gender expansive children who were not necessarily transgender.

**Q. The statement is I think fairly specific. And as you are aware, the discussion cites various references, but the introductory sentence states in most children diagnosed with GD a gender dysphoria or gender incongruence did not persist into adolescence. Do you believe to be a true statement or false statement?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: The problem is I can't answer that quite that cleanly. The statement references a circumstance that I just referenced where children receiving that label have to --- for the most part were not transgender. The only caution I want to make is that as we grow more refined in our understanding of gender identity and also in our labeling, that we are more specific in identifying

Page 117

**Q. Well, let me ask you to turn to page 3881. And at the top of that first column on 3881 it reads we, therefore, advise starting suppression in early puberty to prevent irreversible development of undesirable secondary sex characteristics. However, comma, adolescents with gender dysphoria, slash, gender incongruence should experience the first changes of their endogenous puberty because their emotional reaction to these first physical changes has diagnostic value in establishing the persistence of gender dysphoria/gender incongruence.**

Do you see that language?

A. I do.

**Q. And as a scientist and practitioner do you agree with that statement?**

A. I would say that the validity of that statement is in evolution.

**Q. In your practice, over time --- well, let me ask you this. When this was drafted did you raise an objection to the proposition that the child's emotional reaction to the first physical changes of puberty had important diagnostic value?**

A. I cannot recall our specific conversations, but if you're asking if my view has shifted since let's say

1 2015, 2016, 2017, no, the recognition that there is an  
2 evolution was already part of my opinion.

3 **Q. What do you mean the recognition that there is  
4 an evolution about?**

5 A. So the evolution is that whether there is a need  
6 to start puberty as a diagnostic --- as a necessary  
7 diagnostic circumstance.

8 **Q. In your practice today do you prescribe puberty  
9 blockers prior to Tanner Stage 2?**

10 A. I --- so two things. My practice is with  
11 adults. And although I will see older kids because I  
12 don't have a hard threshold of age 18, but I don't  
13 prescribe puberty blockers because I don't --- my  
14 practice does not include those age children. But two,  
15 it is still the guidance and so the pediatricians who  
16 are part of my program do not prescribe puberty blockers  
17 prior to Tanner 2 for the reason I stated initially.

18 **Q. And according to these guidelines, by the time  
19 you reach Tanner Stage 2 there have been sufficient  
20 first pubertal --- stages of pubertal development to  
21 give a chance to observe the child's reaction to  
22 pubertal changes for diagnostic purposes.**

23 **Correct?**

24 ATTORNEY BLOCK: Objection to form.

1 **changes of puberty as part of their process of  
2 determining whether transgender hormonal therapies of  
3 any sort are appropriate for that child?**

4 A. Yeah, I can't give you give you an answer. I  
5 would actually have to go survey my psychologists.

6 **Q. Let me direct you to paragraph 17 of your  
7 rebuttal report. And there you say in the second  
8 sentence under current standards of care transgender  
9 adolescents are eligible to receive puberty blockers  
10 when they reach Tanner 2, not Tanner 3, which is early  
11 enough to prevent endogenous puberty from taking place,  
12 closed quote.**

13 **Do you see that?**

14 A. I do.

15 **Q. Now, just for context, you testified previously  
16 that the large majority of minors I'll say who present  
17 with gender incongruence or gender dysphoria are, in  
18 fact, considerably older and have gone through at least  
19 most of the Tanner stages.**

20 **Correct?**

21 ATTORNEY BLOCK: Objection to  
22 characterization.

23 THE WITNESS: Most of the people we are  
24 seeing in clinical practice are coming to us at later

1 THE WITNESS: So the --- so I guess there  
2 are kind of two pieces. The sentence is --- that  
3 sentence is written, but that is the sentence that I'm  
4 suggesting is an opinion that is in evolution, like I'm  
5 saying, to whether that need really exists or not. The  
6 reason why we still don't prescribe puberty blockers  
7 before Tanner 2 is that there is no point, there is no  
8 preventive element to puberty blockers and so there is  
9 no point to give them before puberty begins and there is  
10 no way to know that until there is an observable  
11 objective finding.

12 **Q. Has your own practice ever involved to a  
13 significant extent treating prepubertal or early  
14 pubertal stage children for gender dysphoria or gender  
15 incongruence incongruence?**

16 A. Have I personally cared for prepubertal children  
17 who are transgender or otherwise? Actually, in the  
18 subjects, no.

19 **Q. And do physicians who do treat prepubertal  
20 children report to you in connection with your position  
21 at the clinic or the Mount Sinai Medical Hospital?**

22 A. Yes.

23 **Q. And do you know whether your clinic makes use of  
24 children's emotional reactions to the first physical**

1 stages of development, yes.

2 BY ATTORNEY BROOKS:

3 **Q. And so when we talk about prepubertal children,  
4 we're talking about a small minority of the patients  
5 coming in to ---?**

6 A. I can't define small, but it is the minority,  
7 that's correct.

8 **Q. And do you believe that what your clinic is  
9 seeing in that regard is typical of what's being seen  
10 across the country these days?**

11 A. So if I'm sitting here as an expert, I don't  
12 have an expert survey to point to, to give you an answer  
13 there.

14 **Q. But you read the literature and you talk to  
15 colleagues at other institutions.**

16 **Am I correct?**

17 A. I certainly both read the literature and talk to  
18 colleagues.

19 **Q. And is it your current belief that what you are  
20 seeing in terms of the breakdown of patient population  
21 is similar to or quite different from what other major  
22 gender clinics are experiencing?**

23 A. So kind of separating, I'm living in my expert  
24 role, I really want to point to data where I have any

confidence at all, and I have none. If you are asking me in a more informal way among our conversations, then I can answer that our experience seems similar to others' experience.

**Q. All right.**

**So in talking about prepubertal children --- well, strike that. We've been through that.**

**In your rebuttal report when you said beginning puberty blockers at Tanner stage 2 is early enough to prevent endogenous puberty from taking place, let me ask you, in consideration, do you believe it is accurate as stated?**

A. So Tanner 2 early enough to prevent endogenous puberty from taking place, yes, that is accurate.

**Q. You would agree with me, would you not, that the endocrine guidelines of which you are a co-author recommend to treat beginning puberty blockers at Tanner Stage 2?**

A. So to clarify, under the cited guidelines what they say the recommendation is do not use puberty blockers prior to puberty beginning, prior to Tanner 2.

**Q. Let me direct you to recommendation 2.2 on page 3880. Recommendation 2.2 reads we suggest the clinicians begin pubertal hormone suppression after**

**Stage 2 does not categorically prevent endogenous puberty from taking place but instead prevents a substantial portion of endogenous puberty from taking place.**

**Correct?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So let me ---.

BY ATTORNEY BROOKS:

**Q. It is in paragraph 17.**

A. So the --- I guess the way this is understood is --- I guess it depends on how extreme you want to take things. It is back to our original conversation of that cause has to take place before effect. So it's parsing it to that degree.

In a biological context it really is the case that we need some objective evidence before we begin things so that we don't make the mistake of using a medication prior to its having any impact. And then it's also true that some of the hormone mediated changes that we see do actually regress to that prepubertal state when we --- when you use puberty blockers at Tanner 2. So the statement as written --- as I wrote it is accurate in the way we think of these things in biology.

**girls and boys first exhibit physical changes of puberty.**

**Do you see that?**

A. I do.

**Q. And then it says, paren, Tanner stages G2/B2 which is to say the girls Tanner 2 or boys Tanner 2, correct?**

A. That is what that means, yes.

**Q. So the official recommendation from the Endocrine Society is begin at or after Tanner Stage 2, right?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: That is a correct.

BY ATTORNEY BROOKS:

**Q. And it says that Tanner Stage 2 is defined as girls and boys first exhibiting physical changes of puberty.**

**Correct?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: The definition of Tanner 2, is where there is any objective evidence when puberty has begun.

BY ATTORNEY BROOKS:

**Q. So in fact, beginning puberty blockers at Tanner**

**Q. Although the guidelines specifically state that adolescents should --- before puberty blockers, quote, should experience the first changes of their endogenous, spontaneous puberty. And the recommendation calls for beginning puberty blockers, quote, after girls and boys first exhibit physical changes at puberty, paren, Tanner stages 2, closed paren. I'm not misreading anything, am I?**

ATTORNEY BLOCK: Objection to just reading an excerpt.

THE WITNESS: Right. I don't know --- I don't know if those were all direct quotes or not so I won't comment on whether you're misreading or not, but the first statement that you reference, as I've said, is one where there is an evolving understanding of its veracity or its applicability.

The statement 2.2 is simply using alternate phrasing for saying Tanner 2, that is we need to have objective evidence that puberty is genuinely beginning. The focus and the purpose of these statements is to avoid people using puberty blockers on non-pubertal kids.

BY ATTORNEY BROOKS:

**Q. Well, you would agree with me, would you not,**

1 **that if one administer puberty blockers in accordance**  
 2 **with Endocrine Society guidelines, then some stages of**  
 3 **endogenous male puberty will have occurred in natal male**  
 4 **patients?**

5 ATTORNEY BLOCK: Objection the form.

6 THE WITNESS: So when we are ---  
 7 specifically we're referencing transgender girls here.  
 8 And although pre-pubertis gender boys, when we see  
 9 Tanner 2, then some --- some degree of development has  
 10 taken place. That part is true. So in the absolute  
 11 sense, then yes. But in a biological sense, like I said  
 12 already, the --- some interesting reality is that some  
 13 of that does regress.

14 BY ATTORNEY BROOKS:

15 **Q. By the way, you, yourself, do not have any**  
 16 **knowledge as to what developments of endogenous male**  
 17 **puberty BPJ underwent prior to initiating puberty**  
 18 **blockers, do you?**

19 A. I have had no physical contact with BPJ.

20 **Q. Nor have you studied BPJ's chart sufficiently to**  
 21 **be feel that you know the answer to that question?**

22 A. Right, I'm not expressing any opinion to the  
 23 specific medical terms, that's right.

24 **Q. Have you, yourself, ever supervised any**

1 Transgender Patient Article, was marked  
 2 for identification.)

3 ---

4 BY ATTORNEY BROOKS:

5 **Q. Am I correct that this is --- well, you tell me,**  
 6 **is this an article or book chapter? How would you**  
 7 **describe this document?**

8 A. This is a review article from the Annals of  
 9 Internal Medicine.

10 **Q. And by review you mean it's not reporting on**  
 11 **original research but rather summarizing the state of**  
 12 **knowledge in a particular area?**

13 A. That is correct.

14 **Q. Okay.**

15 And the pages may have ITC and a number, but  
 16 I'll just refer to the number if I may. On page three,  
 17 column two, is a statement that I think is just  
 18 repeating what you told me, that is most --- quote, most  
 19 transgender persons present to clinicians in late  
 20 adolescence or adulthood, closed quote. That is  
 21 consistent with what you testified earlier.

22 **Correct?**

23 A. That is, yes.

24 **Q. And if you turn then to page five, column two,**

1 **research, clinical research, concerning treatment of**  
 2 **prepubertal children for gender dysphoria or gender**  
 3 **incongruence?**

4 A. Have I supervised research on treatment of  
 5 prepubertal transgender girls? Let me think about that.  
 6 Nothing is coming to mind, but our program does do  
 7 research across an age span.

8 **Q. Well, some of your colleagues might have done**  
 9 **such research, but my question is whether you have been**  
 10 **personally supervised or involved in such research?**

11 A. I'm pretty involved actually, especially in our  
 12 research program, but I'm having a difficult time coming  
 13 up with an example.

14 **Q. All right.**

15 **I just want to make sure I know about it if it**  
 16 **exists.**

17 A. Yes.

18 ATTORNEY BROOKS: Let me mark as Safer  
 19 Exhibit 9 an article entitled --- an article or a  
 20 chapter or something entitled Care of the Transgender  
 21 Patient dated 2019 by Dr. Safer and by Doctor Vin  
 22 Tangpricha.

23 ---

24 (Whereupon, Exhibit 9, Care of the

1 **you write in the first full sentence in column two,**  
 2 **prior effects of androgens on the skeleton height and**  
 3 **size and shape of the hands, feet, jaw and pelvis and**  
 4 **voice, including visibly --- visible laryngeal**  
 5 **prominence, will not be altered if treatment is**  
 6 **initiated after puberty.**

7 **Do you see that language?**

8 A. I do.

9 **Q. And is it consistent with your understanding**  
 10 **that at this stage also changes to the size of the heart**  
 11 **and the lungs will not be altered if testosterone is**  
 12 **commenced after the initiation of puberty?**

13 A. Not quite.

14 **Q. Explain that to me, please.**

15 A. So transgender women, if they have gone through  
 16 a typical male puberty, are going to remain larger, but  
 17 the testosterone has action on certain tissues, so  
 18 specifically muscle, and that --- when those  
 19 testosterone levels shrink, then that muscle shrinks and  
 20 the heart muscle is --- well, the heart is a muscle, so  
 21 it will be --- there will be an impact from body size,  
 22 but there will also be impact from the lower level of  
 23 testosterone. So it will be kind of a mix of those two.

24 **Q. The heart is a muscle but it has in it cavities**

1 of a certain size in which blood flows, out of which  
2 blood is pumped, correct? Do you have any knowledge,  
3 are you aware of any literature that documents that  
4 testosterone suppression reduces the heart's pumping  
5 capacity?

6 ATTORNEY BLOCK: Objection to form.

7 THE WITNESS: So the --- so there is a  
8 gap there of transgender research --- so no, that is  
9 something that's not been studied.

10 BY ATTORNEY BROOKS:

11 **Q. And the lungs are not muscle tissue. Are you**  
12 **aware of any science that indicates or even suggests to**  
13 **you as an expert that an individual who has gone through**  
14 **typical male puberty, that individual's lungs reduce in**  
15 **size if testosterone is suppressed?**

16 A. So the answer with regard to lungs is going to  
17 have some of those same inputs as heart or other tissues  
18 actually where overall size of the individual is not ---  
19 well, certainly height at least is not decreasing, and  
20 so this person is larger. And so lung size matches that  
21 to some degree. And testosterone has some impact on  
22 surrounding muscle. And so to the degree that that  
23 shrinks there might be lung shrinking too. And so you  
24 hear that --- that is going to be a complex answer. And

1 in terms of interpreting it even, you then would also  
2 have to interpret it in the context of the size of the  
3 body if you want to consider function, and none of this  
4 has been studied.

5 **Q. Certainly you don't believe, do you, that an**  
6 **individual who has been --- let me start that again. It**  
7 **is not your opinion, is it, that testosterone**  
8 **suppression by an individual who has been through a**  
9 **typical male puberty reduces that individuals VO2 mass**  
10 **to typical female levels?**

11 A. So the more we get into some of the subtler  
12 physiology, I will take a step back and give you an  
13 expert opinion, but I will --- in addition to that point  
14 out that we don't even have studies on this. We're just  
15 at a stage of beginning to look at that sort of thing.

16 ATTORNEY BLOCK: Roger, are you able to  
17 speak up a little?

18 ATTORNEY BROOKS: I will try.

19 BY ATTORNEY BROOKS:

20 **Q. You state that in paragraph 55 of your expert**  
21 **report, Exhibit 1?**

22 A. So paragraph 55.

23 **Q. Fifty-five (55). You state that there are,**  
24 **quote, only two studies examining the effect of**

1 gender-affirming hormone therapy on athletic  
2 performance, closed quote. Do you see that?

3 A. Yes.

4 **Q. You are aware, are you not, that there are a**  
5 **substantially larger number of studies that examine the**  
6 **effect of testosterone suppression on strength or muscle**  
7 **mass in natal males?**

8 ATTORNEY BLOCK: Objection to form.

9 THE WITNESS: There are --- there are a  
10 handful of studies on the impact of testosterone  
11 lowering treatment on transgender women on some tissues,  
12 yes.

13 BY ATTORNEY BROOKS:

14 **Q. Well --- and not to get carried away with the**  
15 **terminology, there are also studies that relate to**  
16 **application of testosterone suppression to males who**  
17 **don't identify as transgender, are there not?**

18 A. To cisgender men in addition to transgender  
19 women there are some studies --- yes, there are actually  
20 some modest studies, yes, on cisgender men.

21 **Q. And have you now taken some care to review**  
22 **yourself all the peer-reviewed studies of that type that**  
23 **were cited in Doctor Brown's report?**

24 A. I have looked at papers that were cited by

1 Doctor Brown. The moment we use the word all I  
2 hesitate, but certainly I've read through the papers  
3 that were cited.

4 ATTORNEY BROOKS: Well, let's start with  
5 one you referenced, article by Roberts, et al., from  
6 2020, which I will mark as Exhibit --- Safer Exhibit-10.

7 COURT REPORTER: 10.

8 ATTORNEY WILKINSON: 10, Tab 60.

9 ---

10 (Whereupon, Exhibit 10, Roberts, et al,  
11 Articles, was marked for  
12 identification.)

13 BY ATTORNEY BROOKS:

14 **Q. And in fact, this is one of only very few**  
15 **articles that you cite in your expert report start to**  
16 **finish.**

17 **Correct?**

18 ATTORNEY BLOCK: Objection to form.

19 THE WITNESS: So this paper is referenced  
20 to an expert report.

21 BY ATTORNEY BROOKS:

22 **Q. Let me direct you to the last page of your**  
23 **expert report where there is a bibliography. And other**  
24 **than citing to your own writings as the entire basis of**

1 **your opinions you cited only six articles.**

2 **Correct?**

3 ATTORNEY BLOCK: Objection to  
4 characterization about its entire cases for his  
5 opinions.

6 THE WITNESS: So the paper specifically  
7 referenced two reviews and six papers but recognized  
8 that some of these papers specifically are summaries of  
9 the topic.

10 BY ATTORNEY BROOKS:

11 **Q. You have studied the Roberts 2020 article with**  
12 **some care.**

13 **Is that correct?**

14 A. I have indeed, yes.

15 **Q. And so far as you know it is the only**  
16 **longitudinal study of the impact of testosterone**  
17 **suppression in natal males and actual athletic**  
18 **performance and in this case running.**

19 **Correct?**

20 ATTORNEY BLOCK: Objection to form.

21 THE WITNESS: So the Roberts study and  
22 the Harper study are both studies of transgender women  
23 with at least two time points.

24 BY ATTORNEY BROOKS:

1 **of testosterone on athletic performance is some of the**  
2 **strongest data that we have available?**

3 ATTORNEY BLOCK: Objection to form.

4 THE WITNESS: It is my opinion that the  
5 Roberts and Harper studies are the only two studies that  
6 we have available.

7 BY ATTORNEY BROOKS:

8 **Q. Is it your opinion as an expert, is it not, that**  
9 **the structure of the Roberts study renders it --- and**  
10 **the source of its data renders it far more reliable than**  
11 **the Harper 2015 study?**

12 ATTORNEY BLOCK: Objection to form.

13 THE WITNESS: I would not overstate that,  
14 so no. If I'm being --- if I'm being professorial and  
15 saying this is how to organize something, then in that  
16 context I might say that, but in terms of simply  
17 believability of data, I got two modest papers that are  
18 the sum of the world literature on the subject.

19 BY ATTORNEY BROOKS:

20 **Q. You say in paragraph 56 of your report that**  
21 **Roberts found, quote, after two years of**  
22 **gender-affirming hormone therapy transgender women**  
23 **completed the 1.5 mile run 12 percent faster on average**  
24 **than non-transgender women, closed quote. Do you see**

1 **Q. The Harper study is strictly retrospective, it**  
2 **is not a prospective, longitudinal study?**

3 A. The Harper study is --- that's a good question.  
4 I actually don't know if it is --- it's probably mixed,  
5 honestly.

6 **Q. Well, we can look at it, but it is not mixed.**  
7 **It is a one-time survey.**

8 A. Well, to be clear, the way we phrase these  
9 things sometimes are --- I'm trying to be --- are  
10 according to certain conventions academically, so that  
11 sometimes it will be framed that way because from an  
12 academic perspective we'll use that context, but I think  
13 some of the data was actually collected in both  
14 collections.

15 **Q. The Roberts study you understand to be a**  
16 **prospective, longitudinal study, do you not?**

17 A. Well, actually, you are testing me on that. Did  
18 they set out at the beginning to do it or did they go  
19 back and look? I'd have to see.

20 **Q. Well, based on the method, I think the answer is**  
21 **they went back and looked because it begins we reviewed?**

22 A. Yes.

23 **Q. Do you --- is it your opinion that amongst the**  
24 **available data, the Roberts study is --- on the impact**

1 **that?**

2 ATTORNEY BLOCK: I think he needs some  
3 time to get ---.

4 THE WITNESS: Yeah, to actually find  
5 the ---.

6 BY ATTORNEY BROOKS:

7 **Q. Paragraph 56. And I will refer you to the third**  
8 **sentence.**

9 A. All right.

10 Sorry say that again.

11 **Q. I'm simply calling your attention to the place**  
12 **where you wrote at the Roberts report that after two**  
13 **years of a gender-affirming hormone therapy transgender**  
14 **women completed the 1.5 mile run 12 percent faster on**  
15 **average than non-transgender women.**

16 A. Yes.

17 **Q. And two years, not a trick question here, twice**  
18 **as long as the one year testosterone suppression**  
19 **requirement that led to the NCAA rule.**

20 **Correct?**

21 A. Two years is twice one year, yes.

22 **Q. And you would agree with me that a 12 percent**  
23 **faster in women's time is a substantial advantage?**

24 ATTORNEY BLOCK: Objection to form.

1 THE WITNESS: So this is a bit --- this  
2 is a bit of the same conversation. I guess I can't say  
3 that in a blanket way. It depends on context.

4 BY ATTORNEY BROOKS:

5 **Q. The context here is that that these are all Air**  
6 **Force members, do you recall?**

7 A. I believe they are all Air Force members, yes.

8 **Q. All subject to Air Force physical fitness**  
9 **requirements. So we are not talking about couch**  
10 **potatoes?**

11 A. I'm not rendering an opinion there as an expert.

12 **Q. Generally you would accept that this is a**  
13 **relatively fit population?**

14 A. I can't even render an opinion there as an  
15 expert.

16 **Q. Do you have some unhealthy relative who's a**  
17 **member of the armed forces?**

18 A. I was in the National Guard, so I do have some  
19 insight.

20 **Q. Okay.**

21 **You would agree, would you not, that running**  
22 **speed and endurance, per se, are relevant to quite a**  
23 **number of sports?**

24 A. Running speed and endurance are relevant to many

1 sports. I'm certain that is true. I'm not ---

2 **Q. Well ---.**

3 A. --- an expert again.

4 **Q. I'm no sports fan, but we've all seen enough**  
5 **sports to know there's a lot of running involved not**  
6 **just in track but in basketball, soccer, lacrosse and**  
7 **field hockey.**

8 **Correct?**

9 A. I have observed that, yes. But again, I'm not  
10 rendering an expert opinion there, but yes.

11 **Q. And on page six of this paper ---.**

12 A. This is Roberts.

13 **Q. Yes, Roberts and Exhibit 10. Roberts and his**  
14 **co-authors summarize in their conclusion by stating,**  
15 **quote, in this study we confirm that the use of gender**  
16 **affirming hormones are associated with changes in**  
17 **athletic performance and demonstrated that the**  
18 **pretreatment differences between a transgender and a**  
19 **cisgender woman persist beyond the 12-month time**  
20 **currently --- requirement currently being proposed for**  
21 **athletic competition by the World Athletics and the IOC.**  
22 **Do you see that?**

23 A. This is the conclusion section?

24 **Q. It is.**

1 A. Yes, I see that.

2 **Q. And you don't have any expert opinions that the**  
3 **findings of Roberts are inaccurate or unreliable, do**  
4 **you?**

5 A. So the --- this is again a question of context.

6 So I have no reason to suspect that these data are  
7 suspect. The only question then is what we conclude  
8 when you do a study of --- for the transgender women I  
9 think we are talking about 29 people, which I certainly  
10 like a lot better than simply pointing to a random  
11 individual, but I recognize as also simply 29  
12 individuals in a certain circumstance that might or  
13 might not be replicated as we do this again and increase  
14 the numbers of people that we evaluate.

15 **Q. You don't propose to offer any expert opinion**  
16 **that the findings of Roberts as reported in this paper**  
17 **of 2020 are inaccurate?**

18 A. So, I guess the way I said it is how I said it  
19 already, which is I'm not doubting Roberts' data, but I  
20 wouldn't then over generalize to say that I know that  
21 these would be the findings we would see in every  
22 similar circumstance.

23 **Q. And are you aware that one common track event or**  
24 **cross-country event, I can never keep them straight, is**

1 **the 1600 meter, which is about a mile?**

2 A. Actually, that is not my expertise. I believe  
3 you.

4 **Q. Are you aware that the 3,000 meter, a 1.8 mile**  
5 **distance, is a standard event?**

6 A. If you are meaning to quiz me on the standard  
7 lengths these days and meters and all of that, no.

8 ATTORNEY BROOKS: Well, I can't complete  
9 my next document in two minutes, we if we want to break  
10 at 1:00 now or I can do one more document.

11 ATTORNEY BLOCK: I'm fine continuing if  
12 you are.

13 THE WITNESS: My bias is to push.

14 ATTORNEY BROOKS: Folks online, we're  
15 going to continue a little bit farther.

16 BY ATTORNEY BROOKS:

17 **Q. You cited a paper by Harper from 2015. And that**  
18 **paper also I take it you studied with some detail?**

19 A. Yes.

20 **Q. And how many individuals did Harper have in that**  
21 **study?**

22 A. I --- do we have her ---?

23 **Q. Everything that you mention I have.**

24 ATTORNEY BROOKS: Let me mark as Safer

Exhibit 11 ---

ATTORNEY WILKINSON: Yes.

ATTORNEY BROOKS: --- Harper's --- Harper et al. or just Harper, article Race Times for Transgender Athletes from 2015.

ATTORNEY WILKINSON: Tab 61.

---

(Whereupon, Exhibit 11, Race Times for Transgender Athletes Article, was marked for identification.)

---

THE WITNESS: Thank you.

BY ATTORNEY BROOKS:

**Q. You say you have worked with Joanna Harper, you are aware that Dr. Harper is both an athlete and transgender?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: I am aware. I am aware that she is an athlete, and I'm aware that she is transgender.

BY ATTORNEY BROOKS:

**Q. Did you have after studying the paper end up with an understanding of how many participants there were?**

**long that they had suppressed testosterone.**

**Correct?**

A. There was no independent confirmation beyond Ms. Harper and her dealing with other subjects directly.

**Q. Well, in your view as a scientist, that's not independent confirmation, is it?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So I'm not expressing an opinion there because in a science --- you know, in a scientific paper we would have --- we would have peer review, but we don't --- that just --- ends up being a little bit of a fuzzy reality.

BY ATTORNEY BROOKS:

**Q. There is no information in this paper about what testosterone levels were achieved by any of these individuals as a result of suppression, is there?**

A. I don't know. Let's --- I can look through that a little bit because does she reference how many of them have had surgery and such? It has been quite a while, you know. So notably, there is some independent confirmation of some of the data because some of this was posted.

**Q. Wait. Let me just be clear. Some of the times were verified independently.**

A. There were eight participants. I'm looking at Table 5.

**Q. Did you have an understanding of how those participants were recruited?**

A. I do have some understanding of that, yes.

**Q. How is that?**

A. The --- how would I characterize this? It's somewhat ad hoc in the sense that Ms. Harper is in the category of these other participants, and so she was able to identify others that met the criteria of being both transgender and being sufficiently intense in their middle distance running that they had race times that they could identify that would allow for the --- for these determinations of age based --- I don't know all the terminology here, but their age-based grade proportional to others in that same sex category.

**Q. And it is consistent with your understanding, is it not, that all of the information in this study about what hormonal treatment these individuals had undergone was self reported?**

A. This is --- the entire study is self report, that is she didn't have --- Ms. Harper did not have access to people's individual records independently.

**Q. So there was no independent confirmation of how**

**Correct?**

A. That's correct.

**Q. Nothing about the hormonal treatment?**

A. Right.

ATTORNEY BLOCK: Do you want to give him a chance to review it?

BY ATTORNEY BROOKS:

**Q. Doctor Safer, let me just withdraw that question and ask you another question.**

A. Yeah, go ahead.

**Q. Do you know whether Doctor Harper stands behind the conclusions of her 2015 paper today?**

A. If you ask me do I know it, that's too strong a statement.

ATTORNEY BROOKS: Let me mark as Safer Exhibit 12 an article by Joanna Harper and others from 2021 entitled How Does Hormone Transition in Transgender Women Change Body Composition, Muscle Strength and Hemoglobin.

ATTORNEY WILKINSON: Tab 21.

---

(Whereupon, Exhibit 12, Joanna Harper Article, was marked for identification.)

---

BY ATTORNEY BROOKS:

**Q. Dr. Safer, have we put that in front of you? Yes, we have. Are you familiar with this article?**

A. I am.

**Q. And have you read it, reviewed it recently?**

A. I have reviewed it relatively recently.

**Q. And do you understand, and I didn't completely read the title. The second sentence of the title says Systematic Review with the Focus on Implications for Sport Participation.**

**Do you see that?**

A. I do.

**Q. Can you tell me why when you cited Harper's 2015 paper that you just referred to as older science you didn't cite Harper's 2021 publication?**

A. So to be clear, I didn't use the older science. I simply referenced Harper's paper as one of the only two papers on the subject. And your question?

**Q. Why didn't you cite Harper's 2021 paper on the topic?**

A. So this paper is more in the category of the papers looking at impact on tissues of which there are several papers as opposed to actually investigating a specific activity, a person's activity. And does this

**endurance and performance?**

A. The statement here is too broad, so it's simply raising questions.

**Q. Well, Joanna Harper says here that the findings of her current review were that 30 months of gender affirming hormone therapy may be sufficient to attenuate some but not all influencing factors associated with muscular endurance and performance?**

ATTORNEY BLOCK: Objection to leaving out words of what you quoted.

BY ATTORNEY BROOKS:

**Q. And my question for you is do you intend to offer an expert opinion that you believe is inconsistent with that statement?**

ATTORNEY BLOCK: Same objection. It's misquoting the document.

THE WITNESS: So the operative or inoperative word here is may be sufficient, and so when we're --- these are research questions as we try to understand physiology and the relevance of certain testosterone levels at certain endpoints and then not just endpoints as surrogates, which is what most of the papers to date still are, but endpoints in actual athleticism and athletic competition. And so that's all

have primary data in it?

**Q. Well, let me take you to page eight.**

A. Yeah, I don't even think this has a final data in it.

**Q. Describing the Roberts study, Harper here on page eight, column one, about halfway down, summarizes as follows: Quote, trans women ran significantly faster during the 1.5 mile fitness test than ciswomen. These observations in trained transgender individuals are consistent with the finding of the current review in untrained individuals whereby 30 months of gender affirming hormone therapy maybe sufficient to attenuate some but all influencing factors associated with muscular endurance and performance, closed quote.**

**Do you see that?**

A. Yes. This is the end of the paragraph there?

**Q. Yes.**

A. We're starting with these observations, yes, I see that.

**Q. And do you propose to offer any expert opinion inconsistent with Joanna Harper's summary of the data here suggesting that 30 months of gender affirming hormone therapy may be sufficient to attenuate some but not all influencing factors associated with muscular**

this is doing is putting out some questions or some potential thoughts.

BY ATTORNEY BROOKS:

**Q. Let me ask you to turn to page one and column one.**

A. Of this same paper?

**Q. Of the same paper. In the conclusion of the abstract the last sentence reads, quote, these findings suggest the strength may be well be preserved in trans women during the first three years of hormone therapy, closed quote.**

**Do you see that?**

A. I do.

**Q. And having reviewed whatever literature you have reviewed to date do you share Doctor Harper's understanding that strength may well be preserved in trans women during the first three years of hormone therapy?**

ATTORNEY BLOCK: Objection to misquoting the document.

THE WITNESS: So I can't comment on Ms. Harper's understanding, but if you're asking is that --- you know, is the question a question, so the question is a question. These findings suggest that strength may

1 and again an operative word is may.

2 BY ATTORNEY BROOKS:

3 **Q. Yes.**

4 A. And these are as I, a scientist, and she is a  
5 scientist too, we are turning the earth, as it were, of  
6 what we know looking for what questions we might want to  
7 study and how we might want to frame studies going  
8 forward.

9 **Q. Let me take you back to page eight, if I may.**  
10 **And the penultimate sentence of this paper at the bottom**  
11 **of the first column of paragraph of page eight reads,**  
12 **quote --- well, let me read --- yeah, I will just read**  
13 **that, quote, whether transgender and cisgender women can**  
14 **engage in meaningful sport even after gender affirming**  
15 **hormone therapy is a highly debated question, closed**  
16 **quote.**

17 **Do you see that language?**

18 A. I do.

19 **Q. You'll agree that up to the present that is a**  
20 **highly debated question?**

21 ATTORNEY BLOCK: Objection to form.

22 THE WITNESS: There's context there too.

23 So this is referencing a league sport and it's --- as  
24 well there are a range of potential sports, and so the

1 **women can engage in meaningful sport even after gender**  
2 **affirming hormone therapy is one on which reasonable**  
3 **scientists can differ and are differing today given the**  
4 **possibility of data?**

5 ATTORNEY BLOCK: Objection to form for  
6 the same reasons.

7 THE WITNESS: So I'm sitting here as a  
8 scientist talking about differences in athleticism and  
9 such and whether --- and so moving onto meaningful sport  
10 goes beyond my expertise. I'm only putting data  
11 together in a --- that's my lane on this subject.

12 ATTORNEY BROOKS: Okay.

13 Let's break for lunch.

14 ATTORNEY BLOCK: Let's go off the record,  
15 so 2:15.

16 ATTORNEY BROOKS: 2:15? Any dissent? No  
17 dissent.

18 VIDEOGRAPHER: Going off the record. The  
19 current time is 1:16 p.m. Eastern Standard Time.

20 OFF VIDEOTAPE

21 ---

22 (WHEREUPON, A SHORT BREAK WAS TAKEN.)

23 ---

24 ON VIDEOTAPE

1 question and the degree to which it is highly debated  
2 even I'm not going to render an official opinion there.  
3 So the --- whether transgender and cisgender women can  
4 engage in meaningful sport depends on what sport we're  
5 talking about, what treatment we're talking about, age  
6 group, whether elite versus more of an intermural  
7 setting. And so it's just a relatively simple statement  
8 and to summarize a paper I guess.

9 BY ATTORNEY BROOKS:

10 **Q. You agree that this --- that is the question of**  
11 **whether transgender and cisgender women can engage in**  
12 **meaningful sport even after gender affirming hormone**  
13 **therapy is one on which reasonable scientists can**  
14 **disagree and today are disagreeing?**

15 ATTORNEY BLOCK: Objection to form.

16 THE WITNESS: So going back --- so is  
17 your --- so are you asking me --- I guess help me  
18 reframe what the question is there because there are a  
19 bunch of things packed into that sentence actually. And  
20 you heard me try to unpack them both.

21 BY ATTORNEY BROOKS:

22 **Q. That may be a complex question, as debated**  
23 **questions often are, but my question is do you agree**  
24 **that the question of whether transgender and cisgender**

1 VIDEOGRAPHER: Back on the record. The  
2 current time is 2:18 p.m. Eastern Standard Time.

3 BY ATTORNEY BROOKS:

4 **Q. Good afternoon, Dr. Safer. Take you back into**  
5 **context, I'm going to ask you to find your expert**  
6 **report, Exhibit-1, and find paragraph 25, which we have**  
7 **looked at before. And there in the third sentence it**  
8 **reads based on current research comparing**  
9 **non-transgender boys and men with non-transgender girls**  
10 **and women before, during and after puberty the primary**  
11 **known biological driver of these average group**  
12 **differences is testosterone starting at puberty, and not**  
13 **reproductive biology or genetics, period, closed quote.**

14 **Do you see that language?**

15 A. Yes.

16 **Q. And your one cite for that is the endocrine that**  
17 **we've already looked at already.**

18 **Right?**

19 ATTORNEY BLOCK: Objection to the form.

20 THE WITNESS: So the citation in that  
21 paragraph is the Handelsman, yes.

22 BY ATTORNEY BROOKS:

23 **Q. And do you recall our earlier discussion about**  
24 **how the effects of testosterone are cumulative over time**

1 rather than depending solely on the testosterone level  
2 of an individual at a particular time, right? Do you  
3 recall that discussion?

4 A. So the impact --- excuse me, the impact of  
5 testosterone is cumulative. It depends what impacts  
6 we're talking about. So there are impacts that are  
7 cumulative, like height, and there are impacts that  
8 really do reflect that point in time.

9 Q. Now, at the moment let me ask just based on your  
10 recollection. The Handelsman article is Exhibit-4. Do  
11 you have that? And I will ask you to find it in your  
12 pile. I should have neated up your pile of exhibits  
13 while you were out. That looks like it.

14 A. Got it, yes.

15 Q. The Handelsman article, as far as you recall,  
16 does not contain any data or conclusions concerning the  
17 effects of testosterone after the beginning of male  
18 puberty, does it?

19 ATTORNEY BLOCK: Objection to form.

20 THE WITNESS: Honestly, I would have to  
21 go look carefully.

22 BY ATTORNEY BROOKS:

23 Q. Then I won't take time to do that.

24 A. Okay.

1 Q. It does or it doesn't. We will deal with that.

2 A. Yes.

3 Q. Do you know whether any other writing Professor  
4 Handelsman has expressed any view as to whether  
5 testosterone suppression after male puberty eliminates  
6 sex-based physical advantages sufficiently to maintain  
7 fairness in sports for women?

8 ATTORNEY BLOCK: Objection to the form.

9 THE WITNESS: So first of all, putting it  
10 altogether that way isn't necessarily how I would say it  
11 or how I would expect it to be said. It would be  
12 testosterone suppression and whatever the scientific  
13 finding at the moment would be. So we already know that  
14 the data that relate to athleticism are just the Roberts  
15 paper and the Harper paper, so I guess that is as much  
16 as I can say in that particular context. And in terms  
17 of --- so yes, I think that it wouldn't be --- I forgot  
18 already how you phrased that.

19 BY ATTORNEY BROOKS:

20 Q. Let me just ask again.

21 A. Yes.

22 Q. So the first question is not a hard one.

23 A. Okay.

24 Q. Do you know whether Professor Handelsman has

1 himself in his publication expressed any view whether  
2 testosterone suppression after male puberty eliminates  
3 sex-based physical advantages sufficiently to maintain  
4 fairness in sports for women?

5 ATTORNEY BLOCK: Objection to form.

6 THE WITNESS: So I don't know if he has  
7 written something covering all those bases that you just  
8 described, how you described it.

9 ATTORNEY BROOKS: All right. Let's look  
10 at treatment variable. Let me mark as Exhibit 13 a  
11 short article by Dr. Roberts with a subsequent comment  
12 by David Handelsman.

13 ATTORNEY WILKINSON: Tab 62.

14 ATTORNEY BROOKS: And unfortunately, the  
15 words were a little clipped on this. We will see how we  
16 do.

17 ---

18 (Whereupon, Exhibit 13, Dr. Roberts Article, was  
19 marked for identification.)

20 ---

21 ATTORNEY BLOCK: Thanks.

22 BY ATTORNEY BROOKS:

23 Q. And I think a fair description of what we have  
24 here is a relatively popular press type piece by Dr.

1 Roberts first. And this document is dated December 16,  
2 2020.

3 ATTORNEY BLOCK: Objection. Does it say  
4 where it was published?

5 ATTORNEY BROOKS: No, it doesn't say on  
6 its face where it was published. And as we sit here  
7 right now I don't recall, though actually looking at it  
8 I do recall that Kilio is an online publication of some  
9 sort, and I've seen the brand came from the Kilio  
10 website.

11 BY ATTORNEY BROOKS:

12 Q. At any rate, I see the date, I see the title.  
13 It purports to be an article by Professor Roberts. I  
14 just want to be clear in my description it does not ---  
15 it does not have the appearance of a separate peer  
16 review article since the summary taken off of the  
17 article that we've already looked at. And then at the  
18 end of it is a two-paragraph prospective on this offered  
19 by Dr. Handelsman.

20 Do you see that?

21 A. I do.

22 Q. And he begins by making clear that he is  
23 commenting on this study, that is Roberts study that is  
24 discussed above. He is not introducing new science,

1 correct, is that consistent with your understanding?

2 ATTORNEY BLOCK: Objection. Give him a  
3 chance to read it.

4 THE WITNESS: So that, yes, my  
5 understanding, too, is that there is not new data here,  
6 mostly a commentary within the context some of our  
7 existing knowledge on the Roberts study.

8 BY ATTORNEY BROOKS:

9 **Q. And in his comment to Dr. Handelsman states in**  
10 **the second paragraph, as of 2020, quote, a major**  
11 **question remains whether gender affirming hormone**  
12 **treatment overcomes sex-based physical advantages**  
13 **sufficiently to maintain fairness so that an exception**  
14 **can be made for trans women, paren, natal males, closed**  
15 **paren, treated with estrogen.**

16 **Do you see that language?**

17 A. I do.

18 ATTORNEY BLOCK: Objection. I believe  
19 that is what it says, but I just want to note for the  
20 record that there is text cut off on the left.

21 ATTORNEY BROOKS: There is. And I'll get  
22 better copies. I'm looking at a copy that's not cut off  
23 I will represent.

24 BY ATTORNEY BROOKS:

1 disagree with Professor Handelsman summary of the  
2 findings of Roberts?

3 ATTORNEY BLOCK: Objection to form. I'm  
4 just not sure it's all based on Roberts?

5 THE WITNESS: It is not clear to me that  
6 it's --- that it is based on Roberts for what it's  
7 worth. It's also somewhat simplistically written. And  
8 an example is we don't --- the contention with regard to  
9 athletic outcomes relates more to testosterone, and so  
10 saying transgender women treated with estrogens wouldn't  
11 be precisely how I would frame that either.

12 BY ATTORNEY BROOKS:

13 **Q. He concludes --- Professor Handelsman concludes**  
14 **by stating supporting federations should incorporate**  
15 **these findings in the strategies for including trans**  
16 **women in elite female competitions while maintaining**  
17 **fairness and safety for other women. Dr. Safer, do you**  
18 **agree that maintaining safety for cisgender women is a**  
19 **legitimate and indeed important concern?**

20 ATTORNEY BLOCK: Objection to form.

21 THE WITNESS: As an expert I'm not going  
22 to give an opinion.

23 BY ATTORNEY BROOKS:

24 **Q. As Doctor Safer do you agree that ensuring**

1 **Q. And do you have an expert opinion as to ---**  
2 **well, do you propose to offer any opinion disagreeing**  
3 **with Professor Handelsman that as of 2020 it remained a**  
4 **major question whether gender affirming hormone**  
5 **treatment to overcome sex-based physical advantages**  
6 **sufficiently to maintain fairness so that an exception**  
7 **could be made for trans women treated with estrogen?**

8 A. So to me that's too broad a question if you're  
9 asking me to render an expert opinion about his opinion.

10 **Q. I'm asking whether you propose to offer an**  
11 **expert opinion inconsistent with his view that remains a**  
12 **major question as of 2020.**

13 A. It's --- I might --- well, I would at least  
14 phrase things differently in there --- we might have to  
15 go through pieces of it because certainly where we lack  
16 data I think we would agree, but in terms of those  
17 statements that then go on to editorialize, I don't know  
18 that we necessarily agree in how we would frame that.

19 **Q. A little farther down, maybe two sentences down**  
20 **it reads, quote, by contrast, trans women treated with**  
21 **estrogens after completing male puberty experienced only**  
22 **minimal declines in physical performance over 12 months,**  
23 **substantially surpassing average female performance for**  
24 **up to eight years, closed quote. Do you agree or**

1 safety for cisgender women and girls is a legitimate  
2 concern?

3 ATTORNEY BLOCK: Objection to form.

4 THE WITNESS: So if I'm simply speaking  
5 not as an expert, just as an educated person in the  
6 field, then it is true that safety is important, but I'm  
7 not clear that --- I don't know that in most of these  
8 athletic activities it's actually a concern.

9 ATTORNEY BROOKS: Let me mark as Safer  
10 Exhibit 14 a document entitled Guidance with Transgender  
11 Inclusion in Domestic Sport with symbols of a number of  
12 UK sport governing bodies across the front and a  
13 statement published September 2021.

14 ATTORNEY WILKINSON: Tab 22.

15 ---

16 (Whereupon, Exhibit 14, Guidance with  
17 Transgender Inclusion in Domestic Sport,  
18 marked for identification.)

19 ---

20 THE WITNESS: Thank you.

21 BY ATTORNEY BROOKS:

22 **Q. And my first question for you, Dr. Safer, is**  
23 **whether you have seen this document before?**

24 A. I have seen this document before.

**Q. And were you aware of it prior to its reference in this litigation?**

A. I don't know that I was.

**Q. And are you familiar with the role of the supporting body mentioned on the front page in governance of sport within the United Kingdom?**

A. By looking at all their logos, I cannot say that I know them all, no.

**Q. And do you have any knowledge as to whether these are official government charted --- chartered sporting governing bodies?**

A. I do not have that knowledge.

**Q. Have you now studied this document with some care?**

A. I would say that I have only looked at this document superficially. I'm certainly happy to look through it.

**Q. I will ask you just about a couple of passages. Let me ask you to turn to page three of the document. And towards the very bottom and the next to the last paragraph this --- five organizations states, quote, our work exploring the latest research, evidence and studies made clear that there are retained differences in strength, stamina and physique between the average women**

**compared with the average transgender women for nonbinary person registered male at birth with or without testosterone suppression.**

**Do you see that language?**

A. I do.

**Q. And do you disagree with the conclusion of these UK sporting bodies that the latest research, evidence and studies now make clear that there are retained differences in strength, stamina and physique in nonbinary --- in transgender women or nonbinary persons registered male at birth with or without testosterone?**

ATTORNEY BLOCK: Objection to referring to this as something written by the governing bodies as opposed to the quality council that makes recommendations to the governing bodies.

THE WITNESS: To the statement written by whoever actually wrote it that evidence and studies on the subject of transgender people make clear anything, I disagree.

BY ATTORNEY BROOKS:

**Q. Let me ask you to turn to page six, under the heading question review is recommending it states, quote, as a result of what the review found the guidance concludes that the inclusion of transgender people into**

**female sport cannot be balanced regarding transgender inclusion, fairness and safety in gender affected sport where there is meaningful competition, period, closed quote.**

**Do you see that?**

A. I do.

**Q. And do you disagree with that conclusion of this organization or these organizations?**

A. So I really --- as we discussed earlier, I'm not going to express as an expert --- I don't think I'd be able to express as an expert fairness and so I can't comment any further.

**Q. Let me ask you to turn to page nine in your expert report, paragraph 49.**

A. Okay. Paragraph 49.

**Q. At the end of paragraph 49 you state, quote, a person's genetic makeup and internal and external reproductive anatomy are not useful indicators of athletic performance and have not been used in elite competition for decades. In making that statement when you refer to a person's genetic makeup were you referring to the question of whether they had XX or XY chromosomes?**

A. So when I'm making the statement genetic makeup

I'm heavily referencing chromosomes. So I guess I would say that is mostly correct with some --- with perhaps some known genes, but mostly chromosomes.

**Q. You would agree, would you not, that respected voices in the field take the view that genetic sex it is at least an important determinant of athletic performance, do you not?**

ATTORNEY BLOCK: Objection to form.

THE WITNESS: So that I'm supposed to comment that there are people in the field who say that? I guess what I would say is the consensus right now among medical people advising elite athletic organizations would be to move away from using that as a surrogate. In the past it was. There were chromosome tests and the problem is that people have --- there is quite a bit of variety in biology and of course the moment you make a rule you see the exceptions.

BY ATTORNEY BROOKS:

**Q. The exceptions.**

A. And so I would say that as an expert I can't comment in terms of, you know, some study of everybody's opinion or some survey. But as somebody who has been on these committees I've observed that that was discarded.

**Q. So if you put alongside individuals who suffer**

1 from any condition that has been identified as a  
2 disorder of sexual development, am I correct that you  
3 consider yourself to have expertise in what constitutes  
4 a disorder of sexual development?

5 A. I have some expertise. And the terminology is  
6 actually differences of sexual development or sexual  
7 differentiation or intersex are the terms that are more  
8 popularly used.

9 Q. You would agree with me, would you not, that  
10 many respective sources up to the present would continue  
11 to refer to disorders of sexual development?

12 ATTORNEY BLOCK: Objection to form.

13 THE WITNESS: So there --- what I would  
14 say there is that --- the newer terminology has not ---  
15 has not yet permeated because there have not been  
16 revisions to all the documents that have been created.

17 BY ATTORNEY BROOKS:

18 Q. How about if we say DSD?

19 A. DSD is a reasonably safe or DSD intersex is what  
20 some people do, yes.

21 Q. Well, not all DSDs would be considered intersex  
22 conditions.

23 Correct?

24 A. You are right that some people try to parse

1 those two terms even. And there is --- but I think  
2 those kinds of distinctions might be on the scope of  
3 what we are discussing.

4 Q. Probably so. If we put on side individuals who  
5 suffer from anything that is characterized in the field  
6 as a DSD you would agree, would you not, that genetic  
7 makeup and specifically whether the individual possesses  
8 XX or XY chromosomes is a statistically meaningful  
9 indicator of athletic performance?

10 ATTORNEY BLOCK: Objection to form.

11 THE WITNESS: So no, and the --- it's ---  
12 I guess it depends what you mean is what it comes down  
13 to. So if you are --- if you are simply saying, well, a  
14 certain fraction of people of these chromosomes are  
15 going to be --- have this other characteristic, then  
16 maybe there are those kinds of associations. But if you  
17 are going to say that it's connected to the point where  
18 you could actually use one of those let's say observing  
19 a chromosome as an actual determination for a given  
20 individual, then I would say no.

21 BY ATTORNEY BROOKS:

22 Q. Is it your opinion that a gender identity itself  
23 is a --- or useful indicator of athletic performance?

24 A. It is my opinion that gender identity itself is

1 not a useful indicator of athletic performance.

2 Q. You say at paragraph 44 of your report --- I  
3 will save that. I think that is a new Declaration and  
4 we will not take time to do that.

5 Let me ask you to look at paragraph 24 of your  
6 rebuttal report. You say in paragraph 24 that none of  
7 Doctor Carlson's arguments support HB-3293 categorical  
8 ban of all girls who are transgender from all girls  
9 sports teams.

10 Do you see that?

11 A. I do.

12 Q. And I should continue. I'm sorry. Doctor  
13 Carlson's safety argument relates solely to contact and  
14 collision sports and the physical characteristics  
15 developed during puberty, period. By referring to a  
16 categorical ban let me ask this. Do you agree that  
17 safety considerations could justify or may justify  
18 excluding natal males who experienced all or significant  
19 part of male typical pubertal development from  
20 participating in female division of contact or collision  
21 sports such as basketball and soccer?

22 ATTORNEY BLOCK: Objection to form.

23 THE WITNESS: So if the question is would  
24 I anticipate as an expert that there would be a safety

1 explanation for banning transgender women from the  
2 female category, then I would --- I wouldn't --- I  
3 certainly --- let me think about which way to phrase it.  
4 I would have a hard time coming up with an example where  
5 I would use being transgender as a safety criterion as  
6 opposed to body habitus size or some other more  
7 objective criterion.

8 BY ATTORNEY BROOKS:

9 Q. Well, and I didn't say anything about gender  
10 status. Let me ask again. Would you agree that safety  
11 considerations could justify excluding natal males who  
12 have experienced all or a significant part of male  
13 typical pubertal development from participating in  
14 female division contact and collision sports such as  
15 basketball or soccer?

16 ATTORNEY BLOCK: Objection to form.

17 THE WITNESS: So you're saying that even
